A Centre of Excellence in Science and Technology by the Catholic Archdiocese of Trichur

SEMESTER I

Discipline: Computer Science and Engineering

Stream: Artificial Intelligence and Data Science

25PCST100	ADVANCED MACHINE LEARNING	CATEGORY	L	T	P	CREDIT
		DISCIPLINE CORE 1	3	0	0	3

Preamble: This course introduces machine learning concepts and popular machine learning algorithms. It will cover the standard and most popular supervised learning algorithms including linear regression, logistic regression, decision trees, k-nearest neighbour, an introduction to Bayesian learning and the naive Bayes algorithm, support vector machines and kernels and basic clustering algorithms. Dimensionality reduction methods and some applications to real world problems will also be discussed. It helps the learners to develop application machine learning based solutions for real world applications.

Course Outcomes:

After the completion of the course the student will be able to: *

CO1	Analyse the Machine Learning concepts, classifications of Machine Learning algorithms and basic parameter estimation methods. (Cognitive Knowledge Level: Analyse)
CO2	Illustrate the concepts of regression and classification techniques (Cognitive Knowledge Level: Apply)
CO3	Describe unsupervised learning concepts and dimensionality reduction techniques. (Cognitive Knowledge Level:Apply)
CO4	Explain Support Vector Machine Concepts and graphical models. (Cognitive Knowledge Level:Apply)
CO5	Choose suitable model parameters for different machine learning techniques and to evaluate a model performance. (Cognitive Knowledge Level: Apply)
CO6	Design, implement and analyse machine learning solution for a real-world problem. (Cognitive Knowledge Level: Create)

Program Outcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	60-80%
Analyse	20-40%
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

Continuous Internal Evaluation :40 marks

Micro project/Course based project: 20 marks

Course based task/Seminar/Quiz :10marks

Testpaper,1no. :10marks

The projects shall be done individually. Group projects not permitted. Test paper shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the University. There will be two parts; Part A and Part B. Part A contain 5 numerical questions with 1 question from each module, having 5 marks for each question. (Such questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Suppose that X is a discrete random variable with the following probability mass function: where $0 \leq \theta \leq 1$ is a parameter. The following 10 independent observations were taken from such a distribution: (3, 0, 2, 1, 3, 2, 1, 0, 2, 1). What is the maximum likelihood estimate of θ .

X	0	1	2	3
$P(X)$	$2\theta/3$	$\theta/3$	$2(1-\theta)/3$	$(1-\theta)/3$

2. What is the difference between Maximum Likelihood estimation (MLE) and Maximum a Posteriori (MAP) estimation?

3. A gamma distribution with parameters α, β has the following density function, where $\Gamma(t)$ is the gamma function.

$$p(x) = \frac{\beta^\alpha}{\Gamma(\alpha)} x^{\alpha-1} e^{-\beta x}$$

If the posterior distribution is in the same family as the prior distribution, then we say that the prior distribution is the conjugate prior for the likelihood function. Using the Gamma distribution as a prior, show that the Exponential distribution is a conjugate prior of the Gamma distribution. Also, find the maximum a posteriori estimator for the parameter of the Exponential distribution as a function of α and β .

Course Outcome2(CO2)

1. How can we interpret the output of a two-class logistic regression classifier as a probability?
2. Calculate the output of the following neuron Y if the activation function is a binary sigmoid.

3. Suppose you have a 3-dimensional input $x = (x_1, x_2, x_3) = (2, 2, 1)$ fully connected with weights $(0.5, 0.3, 0.2)$ to one neuron which is in the hidden layer with sigmoid activation function. Calculate the output of the hidden layer neuron.
4. Consider the case of the XOR function in which the two points $\{(0,0), (1,1)\}$ belong to one class, and the other two points $\{(1,0), (0,1)\}$ belong to the other class. Design a multilayer perceptron for this binary classification problem.
5. Why does a single perceptron cannot simulate simple XOR function? Explain how this limitation is overcome?
6. Consider a naïve Bayes classifier with 3 boolean input variables, X_1, X_2 and X_3 , and one boolean output, Y . How many parameters must be estimated to train such a naïve Bayes classifier? How many parameters would have to be estimated to learn the above classifier if we do not make the naïve Bayes conditional independence assumption?

Course Outcome3(CO3):

1. Describe the basic operation of k-means clustering.
2. A Poisson distribution is used to model data that consists of non-negative integers. Suppose you observe m integers in your training set. Your model assumption is that each integer is sampled from one of two different Gaussian distributions. You would like to

Learn this model using the EM algorithm. List all the parameters of the model. Derive the E-step and M-step for this model.

3. A uni-variate Gaussian distribution is used to model data that consists of non-negative integers. Suppose you observe m integers in your training set. Your model assumption is that each integer is sampled from one of two different Gaussian distributions. You would like to learn this model using the EM algorithm. List all the parameters of the model. Derive the E-step and M-step for the model.
4. Suppose you want to cluster the eight points shown below using **k**-means

	A_1	A_2
x_1	2	10
x_2	2	5
x_3	8	4
x_4	5	8
x_5	7	5
x_6	6	4
x_7	1	2
x_8	4	9

Assume that $k=3$ and that initially the points are assigned to clusters as follows:

$C1=\{x_1, x_2, x_3\}, C2=\{x_4, x_5, x_6\}, C3=\{x_7, x_8\}$. Apply the **k**-means algorithm until convergence, using the Manhattan distance.

Course Outcome4(CO4):

1. Describe how Support Vector Machines can be extended to make use of kernels. Illustrate with reference to the Gaussian kernel $K(x, y) = e^{-y}$, where $y = (x-y)^2$.
2. Suppose that you have a linear support vector machine (SVM) binary classifier. Consider a point that is currently classified correctly, and is far away from the decision boundary. If you remove the point from the training set, and re-train the classifier, will the decision boundary change or stay the same? Justify your answer.
3. What is the primary motivation for using the kernel trick in machine learning algorithms?
4. Show that the Boolean function $(x_1 \wedge x_2) \vee (\neg x_1 \wedge \neg x_2)$ is not linearly separable (i.e. there is no linear classifier **sign** ($w_1 x_1 + w_2 x_2 + b$) that classifies all 4 possible input points correctly). Assume that —true is represented by 1 and —false is represented by -1. Show that there is a linear separator for this Boolean function when we use the kernel $K(x, y) = (x \cdot y)^2$ ($x \cdot y$ denotes the ordinary inner product). Give the weights and the value of b for one such separator.

5. Consider the following one-dimensional training dataset, 'x' denote negative examples and 'o' positive examples. The exact data points and their labels are given in the table. Suppose a SVM is used to classify this data. Indicate which are the support vectors and mark the decision boundary. Give the value of the cost function and of the model parameters after training.

6. Write down the factored conditional Probability expression that corresponds to the graphical Bayesian Network shown below.

7. How do we learn the conditional probability tables(CPT) in Bayesian networks if information about some variables is missing? How are these variables called?

Course Outcome5(CO5):

1. Suppose 10000 patients get tested for flu; out of them, 9000 are actually healthy and 1000 are actually sick. For the sick people, a test was positive for 620 and negative for 380. For healthy people, the same test was positive for 180 and negative for 8820. Construct a confusion matrix for the data and compute the accuracy, precision and recall for the data.
2. Given the following data, construct the ROC curve of the data. Compute the AUC.

Thres hold	TP	TN	FP	FN
1	0	25	0	29
2	7	25	0	22
3	18	24	1	11

4	26	20	5	3
5	29	11	14	0
6	29	0	25	0
7	29	0	25	0

3. With an example classification problem, explain the following terms :a)Hyperparameters
b)Training set c)Validation sets d)Bias e)Variance.
4. What is ensemble learning?Can ensemble learning using linear classifiers learn classification of linearly non-separable sets?
5. Describe boosting.What is there lation between boosting and ensemble learning?
6. Classifier Aattains 100%accuracy on the training set and70%accuracy on the test set. Classifier B attains 70% accuracy on the training set and 75%accuracyon the test set. Which one is a better classifier. Justify your answer.
7. What are ROC space and ROC curve in machine learning?In ROC space,which points correspond to perfect prediction, always positive prediction and always negative prediction? Why?
8. Suppose there are three classifiers A, B and C. The (FPR, TPR) measures ofthe three classifiersareas follows – A(0, 1), B(1,1), C(1,0.5).Which can be considered as a perfect classifier? Justify your answer.
9. What does it mean for a classifier to have a high precision but low recall?

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ PAGES:4

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH&YEAR

Course Code:25PCST100

Course Name: ADVANCED MACHINE LEARNING

Max.Marks:60

Duration:2.5Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Explain the principle of the gradient descent algorithm.
2. In a two-class logistic regression model, the weight vector $\mathbf{w} = [4, 3, 2, 1, 0]$. We apply it to some object that we would like to classify; the vectorized feature representation of this object is $\mathbf{x} = [-2, 0, -3, 0.5, 3]$. What is the probability, according to the model, that this instance belongs to the positive class?
3. Expectation maximization(EM) is designed to find a maximum likelihood setting of the parameters of model when some of the data is missing. Does the algorithm converge? If so, do you obtain a locally or globally optimal set of parameters?
4. What is the basic idea of a Support Vector Machine?
5. What is the trade-off between bias and variance? (5x5=25)

Part B

(Answer any five questions. Each question carries 7 marks)

6. Suppose $x_1, \dots, x_n$ are independent and identically distributed(iid) samples from a distribution with density (7)

$$f_X(x | \theta) = \begin{cases} \frac{\theta x^{\theta-1}}{3^\theta}, & 0 \leq x \leq 3 \\ 0, & \text{otherwise} \end{cases}$$

Find the maximum likelihood estimate(MLE) for θ .

7. Derive the gradient descent training rule assuming for the target function $\mathbf{o}_d = \mathbf{w}_0 + \mathbf{w}_1 x_1 + \dots + \mathbf{w}_n x_n$. Define explicitly the squared cost/error function E , assuming that a set of training examples D is provided, where each training example $d \in D$ is associated with the target output t_d . (7)

(7)

8. Cluster the following eight points representing locations into three clusters: $A1(2,10), A2(2, 5), A3(8,4), A4(5, 8), A5(7,5), A6(6, 4), A7(1,2), A8(4,9)$.

Initial cluster centers are: $A1(2,10), A4(5, 8)$ and $A7(1,2)$.

The distance function between two points $a = (x1, y1)$ and $b = (x2, y2)$ is defined as $D(a, b) = |x2 - x1| + |y2 - y1|$

Use k-Means Algorithm to find the three cluster centers after the second iteration.

9. Describe Principal Component Analysis. What criterion does the method minimize? What is the objective of the method? Give a way to compute the solution from a matrix X encoding the features. (7)

10. Consider a support vector machine whose input space is 2-D, and the inner products are computed by means of the kernel $K(x, y) = (x \cdot y + 1)^2$ ($x \cdot y$ denotes the ordinary inner product). Show that the mapping to feature space That is implicitly defined by this kernel is the mapping to 5-D given by (7)

$$\mathbf{x} = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} \rightarrow \phi(\mathbf{x}) = \begin{bmatrix} x_1^2 \\ x_2^2 \\ \sqrt{2} x_1 x_2 \\ \sqrt{2} x_1 \\ \sqrt{2} x_2 \end{bmatrix}.$$

11. How does random forest classifier work? Why is a random forest better than a decision tree? (7)

- 12 Consider a two-class classification problem of predicting whether a photograph contains a man or a woman. Suppose we have a test dataset of 10 records with expected outcomes and a set of predictions from our classification algorithm. Compute the confusion matrix, accuracy, precision, recall, sensitivity and specificity on the following data. (7)

Sl.No.	Actual	Predicted
1	man	woman
2	man	man
3	woman	woman
4	man	man
5	man	woman
6	woman	woman
7	woman	man
8	man	man
9	man	woman
10	woman	woman

Syllabus

Module-1(Parameter Estimation and Regression)8hours

Overview of machine learning: supervised, semi-supervised, unsupervised learning, reinforcement learning. Basics of parameter estimation: Maximum Likelihood Estimation (MLE), Maximum a Posteriori Estimation (MAP). Gradient Descent Algorithm, Batch Gradient Descent, Stochastic Gradient Descent. Regression algorithms: least squares linear regression, normal equations and closed form solution, Polynomial regression.

Module-2(Regularization techniques and Classification algorithms)9hours

Overfitting, Regularization techniques - LASSO and RIDGE. Classification algorithms: linear and non-linear algorithms, Perceptrons, Logistic regression, Naive Bayes, Decision trees. Neural networks: Concept of Artificial neuron, Feed-Forward Neural Network, Back propagation algorithm.

Module-3(Unsupervised learning)8hours

Unsupervised learning: clustering,k-means,Hierarchical clustering,Principal component analysis,

Density-based spatial clustering of applications with noise(DBSCAN). Gaussian mixture models: Expectation Maximization (EM) algorithm for Gaussian mixture model.

Module-4(Support Vector Machine and Graphical Models)7hours

Support vector machines and kernels: Max margin classification, Nonlinear SVM and the kernel trick, nonlinear decision boundaries, Kernel functions. Basics of graphical models - Bayesian networks, Hidden Markov model - Inference and estimation.

Module-5(Evaluation Metrics and Sampling Methods)8hours

Classification Performance Evaluation Metrics: Accuracy, Precision, Precision, Recall, Specificity, False Positive Rate (FPR), F1 Score, Receiver Operator Characteristic (ROC) Curve, AUC. Regression Performance Evaluation Metrics: Mean Absolute Error (MAE), Root Mean Squared Error (RMSE), R Squared/Coefficient of Determination. Clustering Performance Evaluation Metrics: Purity, Jaccard index, Normalized Mutual Information, Clustering Accuracy, Silhouette Coefficient, Dunn's Index. Boosting: AdaBoost, gradient boosting machines. Resampling methods: cross-validation, bootstrap. Ensemble methods: bagging, boosting, random forests Practical aspects in machine learning: data preprocessing, overfitting, accuracy estimation, parameter and model selection Bias-Variance tradeoff

CoursePlan

No	Topics	No. of Lectures (40)
1	Module-1(Parameter Estimation and Regression)8hours	
1.1	Overview of machine learning: supervised, semi-supervised, unsupervised learning, reinforcement learning.	1
1.2	Basics of parameter estimation: Maximum Likelihood Estimation(MLE)	1
1.3	Basics of parameter estimation:Maximum Likelihood Estimation(MLE) -Examples	1
1.4	Basics of parameter estimation:Maximума Posteriori Estimation(MAP)	1
1.5	Basics of parameter estimation:Maximума Posteriori Estimation(MAP) -Example	1
1.6	Gradient Descent Algorithm, BatchGradient Descent, Stochastic Gradient Descent	1
1.7	Regression algorithms:least squares linear regression,normal equations and closed form solution	1
1.8	Polynomial regression	1
2	Module-2(Regularization techniques and Classification algorithms)9hours	

2.1	Overfitting, Regularization techniques-LASSO and RIDGE	
2.2	Classification algorithms:linear and non-linear algorithms	
2.3	Perceptrons

CODE	MATHEMATICAL FOUNDATIONS FOR DATA SCIENCE	CATEGORY	L	T	P	CREDIT
25PADT102		Program Core 1	3	0	0	3

Preamble:

This course is intended to provide the learners with an outlook on applying concepts in linear algebra in the fields of data science, machine learning, and artificial intelligence. This course helps the learners to acquire the skills to implement the concepts in MATLAB/Python and then apply linear algebra concepts to real datasets. Also, this course discusses the Challenges of applying the acquired knowledge in different Optimization and Linear Algebra concepts toward the inference and prediction stages of Data Analytics.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Analyse the fundamentals of linear algebra and calculus, and other mathematical concepts for Artificial Intelligence, Machine Learning, and Data Science (Cognitive knowledge level: Analyse)
CO2	Apply the knowledge acquired in different optimization and linear algebra concepts Towards the inference and prediction stages of data analytics. (Cognitive knowledge level: Apply)
CO3	Implement linear algebra concepts in scientific programming languages (MATLAB, Python) (Cognitive knowledge level: Apply)
CO4	Apply eigenvectors and SVD for Dimensionality reduction (Cognitive knowledge level: Apply)
CO5	Design, Develop, implement, and Present innovative Ideas on the application of linear Algebra for Data Science, Machine learning, and Artificial Intelligence (Cognitive Knowledge Level: create)

Program Outcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively and write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate mastery over the area as per the program's specialization. The mastery should be at a level higher than the requirements in the appropriate bachelor's program

PO4: An ability to apply stream knowledge to design or develop solutions for real-world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tools to model, analyze and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream-related problems taking into consideration sustainability, societal, ethical, and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

The evaluation shall only be based on application, analysis or design-based questions (for both internal and end-semester examinations).

Continuous Internal Evaluation :40marks

Micro project/Course based project :20marks

Course based task/Seminar/Quiz :10marks

Test paper, 1no. :10marks

The project shall be done individually. Group projects are not permitted.

The test paper shall include a minimum of 80% of the syllabus.

Course-based task/test paper questions shall be useful in testing the knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students.

End Semester Examination Pattern:

The end-semester examination will be conducted by the University. There will be two parts; Part A and Part B. Part A contains 5 numerical questions with 1 question from each module, having 5 marks for each question. (Such questions shall be useful in testing knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem-solving and quantitative evaluation), with a minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

The total duration of the examination will be 150 minutes.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Discuss Linear algebra handles large amounts of data,
2. List ten Powerful Applications of Linear Algebra in Data Science
3. 'Support Vector Machine is an application of the concept of Vector Spaces in Linear Algebra' - Investigate
4. Support Vector Machine Classification

Course Outcome 2 (CO2)

1. Write an algorithm for simple linear regression by gradient descent method
2. Implement Gradient Descent for multilinear regression from scratch
3. Elaborate regularized linear regression for model prediction and reduce errors

Course Outcome 3 (CO3):

1. Elaborate on the different ways to compute and conceptualize matrix multiplication with examples
2. Implement Vector Hadamard multiplication
3. $w1 = [1 \ 35]$;
4. $w2 = [342]$; in MATLAB/Python

Course Outcome4(CO4):

1. Implement the determinant of a matrix product in Python
2. Elucidate the usefulness of Linear Algebra in Dimensionality Reduction
 - i. Principal Component Analysis(PCA)
 - ii. Singular Value Decomposition(SVD)
3. Determine whether the following matrices have a null space. If so, provide basis vector(s) for that null space.

$a. \begin{pmatrix} 4 & 3 \\ 1 & 1 \\ 0 & 5 \end{pmatrix}$
 $b. \begin{pmatrix} 3 & 1 & 5 \\ 4 & 1 & 0 \\ 0 & 0 & 0 \end{pmatrix}$

Course Outcome5(CO5):

1. List the five steps of model fitting
2. Express the average or the mean of a set of numbers as a model and use least squares to fit that model
3. Elaborate on the usage of Linear Algebra in Machine Learning
 - a. Loss functions
 - b. Regularization
 - c. Covariance Matrix

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ PAGES:4

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT102

Course Name: Mathematical Foundation for Data Science

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Explain normal equation. Contrast normal equation and gradient descent. 5
2. Explain overfitting and the method of resolving overfitting 5
3. Make use of the parallel matrix multiplication method to find AB, where 5

$$A = \begin{bmatrix} 2 & 1 & 5 \\ 0 & 7 & 1 \\ 9 & 2 & 4 \\ 3 & 6 & 7 \end{bmatrix} \quad B = \begin{bmatrix} 6 & 1 & 2 \\ 4 & 5 & 6 \\ 1 & 1 & -8 \\ 4 & 0 & -5 \end{bmatrix}$$

4. Let $v = \langle 1, 3 \rangle$ and $w = \langle -4, -2 \rangle$. Write v as the sum of two orthogonal vectors, one of which is the projection of $v \rightarrow$ onto w 5
5. Find the SVD for the matrix 5
(5x5=25)

Part B

(Answer any five questions. Each question carries 7 marks)

6. (a) Write an algorithm for simple linear regression by gradient descent method (7)
7. (a) Implement Gradient Descent for multilinear regression from scratch (7)

8. (a) Elaborate the different types of matrices with examples and implement them using MATLAB or NumPy (7)
- Square matrix
 - Rectangular matrix
 - Symmetrix matrix
 - Skey-symmetric matrices
 - Identity matrix
 - Zero
 - Diagonal matrix
 - Triangular matrix
 - Augmented
 - Complex

9. (a) Define rank and a maximum possible rank (2)

(b) Create a matrix of 10 X 10 with a rank of 4 (use matrix multiplication) (3)

(c) Generalize the procedure to create any M x N matrix with a rank r (2)

10 (a) Implement the determinant of a matrix product in Python (3)

(b) Determine whether the following matrices have a null space. If so, provide basis vector(s) for that null space. (4)

$$a = \begin{pmatrix} 4 & 3 \\ 1 & 1 \\ 0 & 5 \end{pmatrix} \quad b = \begin{pmatrix} 3 & 1 & 5 \\ 4 & 1 & 0 \end{pmatrix}$$

11 (a) Write MATLAB or Python code to implement the following experiment: (7)

- Generate a 2×3 matrix of random numbers.
- Compute its SVD.
- Compute two eigen decompositions using the matrix and its transpose.
- Confirm that the two sets of eigen values match, and check whether the eigenvalues match the singular values

Plot the eigen vectors and singular vectors in 2D or 3D (as appropriate) to confirm that SVD and transpose + eigen decomposition produce the same eigenspaces

12 (a) Determine the eigenvalues and the corresponding eigenvectors of the following matrix (7)

$$\text{matrix } A = \begin{bmatrix} 3 & 2 & 4 \\ 2 & 0 & 2 \\ 4 & 2 & 3 \end{bmatrix}$$

Syllabus (Emphasis shall be on Problem-solving, implementing concepts, and application-
Languages Python/MATLAB)

Module	Contents	hours
I	GRADIENT DESCENT AND REGULARIZATION Gradient Descent, Intuitions, Gradient Descent for a Regression algorithm, Multiple Features, Gradient Descent on Multiple Features, Practice on Gradient Descent for Polynomial Regression, Normal Equation	8
II	LINEAR ALGEBRA-VECTORS: Vectors: geometry and algebra, Vector addition, and subtraction, Vector-scalar multiplication, Dot product geometry, Vector orthogonality, Cauchy-Schwarz inequality, Vector Hadamard multiplication, cross product, unit vectors, VECTOR SPACES: Dimensions, and fields in linear algebra, Subspaces, Subspaces vs. subsets, Span, Linear independence, Basis MATRICES: introduction: dimensionality, Matrix operations, Matrix-scalar multiplication, Implementation, Transpose, Complex matrices, Addition, equality, transpose, Diagonal, and trace,	7
III	MATRICES:- MATRIX MULTIPLICATION- Introduction, matrix multiplication by layering, Multiplication with diagonals, Matrix-vector multiplication, Symmetric matrices, multiply symmetric matrices Hadamard Multiplication, asymmetry Index, Code challenge, RANK -concepts, Maximum possible rank, Computing rank, Rank and scalar multiplication, Rank of added and multiplied matrices, Rank of A & A^T , $A^T A$, AA^T , random matrices, Boosting rank by shifting, rank difficulties, rank, and span, Code challenge: MATRIX SPACES: Column space and Row space of a matrix (A & AA^T), Null space of a matrix, orthogonal subspaces, Dimensions of column/row/null spaces, Example of the four subspaces, code challenge	7
IV	DETERMINANTS, PROJECTIONS&ORTHOGONALIZATION- DETERMINANT- Determinant, Determinant of a 2x2 matrix, Determinant of a 3x3 matrix, characteristic polynomial, the full procedure, determinant of triangles, determinant and row reduction, determinant and scalar multiplication, theory vs practice, Code challenge MATRIX INVERSE: Concept and applications, Inverse of a Diagonal matrix, Inverse of a 2x2 matrix, The MCA algorithm to compute the inverse, Computing the inverse via row reduction, Left inverse and right inverse, Pseudo-inverse, Code challenge PROJECTIONS, AND ORTHOGONALIZATIONS: Projections in R^2 , Projections in R^N , Orthogonal and parallel vector components, Orthogonal matrices, Gram-Schmidt procedure, QR decomposition, Inverse via QR Decomposition, Code challenge LEAST SQUARES FOR MODEL- FITTING IN STATISTICS: Introduction, Least squares via left inverse, Least squares via orthogonal projection, Least-squares via row-reduction, Model-predicted values, and residuals, Least-squares applications, Code challenge	10
V	DIMENSIONALITY REDUCTION: EIGEN DECOMPOSITION- Eigenvalues, eigenvectors, Eigendecomposition, Diagonalization, Matrix powers via diagonalization, Distinct and repeated eigenvalues, symmetric	8

	matrices, Eigen layers of a matrix, Eigen decomposition of singular matrices, Matrix powers and Inverse, Generalized eigen decomposition, Code challenges SINGULAR VALUE DECOMPOSITION (SVD): Singular value decomposition, Computing the SVD, singular values and eigenvalues, Symmetric Matrices, SVD and the four subspaces, SVD, and matrix rank, Spectral theory of matrices, SVD for low-rank approximations, Normalizing singular values, the Condition number of a matrix, SVD and Matrix Inverse, MP pseudo inverse, code challenges	

CoursePlan

S.NO	TOPIC	NO. OF LECTURES
MODULE1-GRADIENTDESCENT AND REGULARIZATION-8 hours		
1.1	Gradient Descent,Intuitions,	1
1.2	Gradient Descent for a Regression algorithm.	1
1.3	Gradient Descent for a Regression algorithm.	1
1.4	Multiple Features	1
1.5	Gradient Descenton Multiple Features,	1
1.6	Practiceon Gradient Descent	1
1.7	Gradient Descent for Polynomial Regression	1
1.8	Gradient Descent and Normal Equation	1
MODULE2 LINEAR ALGEBRA-7HOURS		
	LINEAR ALGEBRA- Vectors	1
2.1	VECTORS: geometry and algebra,Vector addition,and subtraction, Vector-scalar multiplication,	1
2.2	Dot productgeometry,Vector orthogonality,	1
2.3	Vector Hadamard multiplication,crossproduct,unit vectors,	
2.4	VECTOR SPACES: Dimensions, andfields inlinear algebra, Subspaces, Subspaces vs. subsets	1
2.5	Span,Linear independence,Basis	1
2.6	MATRICES: dimensionality, Matrix operations, Matrix-scalar multiplication,	1
2.7	Complex matrices,Addition,equality,transpose,Diagonal,andtrace,	1
MODULE3-MATRICES-7HOURS		
3.1	MATRIX MULTIPLICATION: matrix multiplication by layering,	1

	Multiplication with diagonals, Matrix-vector multiplication,	
3.2	Symmetric matrices, multiply symmetric matrices Hadamard Multiplication, asymmetry Index, Code challenge,	1
3.3	RANK -concepts, Maximum possible rank, Computing rank, Rank and scalar multiplication, Rank of added and multiplied matrices	1
3.4	The rank of A & $A^T A$, AA^T -random matrices,	1
3.5	Boosting rank by shifting, rank difficulties, rank, and span, Code challenge:	1
3.6	MATRIX SPACES : Column space and Row space of a matrix (A & AA^T), Null space of a matrix,	1
3.7	Orthogonal subspaces, Dimensions of column/row/null spaces, Example of the four subspaces, code challenge,	1
MODULE 4-DETERMINANTS, & PROJECTIONS, AND ORTHOGONALIZATION-10 HOURS		
4.1	DETERMINANT - Determinant of a 2x2 matrix, & 3x3 matrix, characteristic polynomial, the full procedure,	1
4.2	determinant of triangles, determinant and row reduction, determinant and scalar multiplication, theory vs practice, Code challenge	1
4.3	MATRIX INVERSE : Concept and applications, Inverse of a Diagonal matrix, Inverse of a 2x2 matrix, The MCA algorithm to compute the inverse,	1
4.4	Computing the inverse via row, Left inverse and right inverse, Pseudoinverse, Code challenge	1
PROJECTIONS AND ORTHOGONALIZATION:		
4.5	Projections in $\mathbb{R}^2$, Projections in $\mathbb{R}^N$, Orthogonal and parallel vector components,	1
4.6	Orthogonal matrices, Gram-Schmidt procedure, QR decomposition,	1
4.7	Inverse via QR Decomposition, Code challenge	1
LEAST SQUARES FOR MODEL-FITTING IN STATISTICS		
4.8	Introduction, least squares via left inverse, Least squares via orthogonal projection,	1
4.9	Least squares via row-reduction, Model-predicted values, and residuals	1
4.10	Least-squares applications, Code challenge	1
MODULE 5-DIMENSIONALITY REDUCTION-8 HOURS		
EIGEN DECOMPOSITION-		
5.1	Eigenvalues, eigenvectors, Eigen decomposition,	1
5.2	Diagonalization, Matrix powers via diagonalization	1
5.3	Distinct and repeated eigenvalues, symmetric matrices, Eigen layers of a matrix,	1

5.4	Eigen decomposition of singular matrices, Matrix powers and Inverse, Generalized eigen decomposition, Code challenges	1
SINGULAR VALUE DECOMPOSITION (SVD)-		
5.5	Singular value decomposition, Computing the SVD, singular values and eigenvalues,	1
5.6	Symmetric Matrices, SVD and the four subspaces, SVD, and matrix rank,	1
5.7	Spectral theory of matrices, SVD for low-rank approximations, Normalizing singular values, the Condition number of a matrix,	1
5.8	SVD and Matrix Inverse, MP pseudo inverse, code challenges	1

25PADT103	INTRODUCTION TO AI AND NLP	CATEGORY	L	T	P	CREDIT
		Program Core 2	3	0	0	3

Preamble:

This course introduces the concepts, tools, and techniques of machine learning for text data. The students will learn the elementary concepts as well as emerging trends in the field of NLP. This course helps the learners to extract information from unstructured text, identify linguistic structure of it, and to apply different techniques for text analytics. The learners will be able to implement and evaluate NLP applications using machine learning and deep learning methods.

Course Outcomes:

After the completion of the course, the student will be able to:*

CO1	Analyze the applications of AI in the domain of NLP (Cognitive Knowledge Level: Apply)
CO2	Transform text into an appropriate data structure (Cognitive Knowledge Level: Apply)
CO3	Apply Probability models, language models, and Markov models for Text processing (Cognitive Knowledge Level: Apply)
CO4	Build NLP applications using Machine Learning Methods (Cognitive Knowledge Level: Apply)
CO5	Design, Develop, Implement and Present innovative Ideas on NLP and AI (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real-world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tools to model, analyze and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	50-80%
Analyse	20-40%

Evaluate	Assess using Assignments/Project
Create	Assess using Assignments/Project

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

The evaluation shall only be based on application, analysis or design-based questions (for both internal and end-semester examinations).

Continuous Internal Evaluation: 40 marks

Microproject/Coursebasedproject: 20 marks

Course based task/Seminar/Quiz : 10 marks

Test paper, 1 no. : 10 marks

The project shall be done individually. Group projects are not permitted. Test paper shall include a minimum of 80% of the syllabus.

Course-based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students.

End Semester Examination Pattern:

The end-semester examination will be conducted by the University. There will be two parts; Part A and Part B. Part A contain 5 numerical questions with 1 question from each module, having 5 marks for each question. (Such questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions).

Relating to theoretical/practical knowledge, derivations, problem-solving and quantitative evaluation), with a minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

The total duration of the examination will be 150 minutes.

Course Level Assessment Questions

Course Outcome1(CO1):

1. Implement artificial intelligence-based solution in agriculture for optimization of irrigation and application of pesticides and herbicides
2. Develop Artificial Intelligence/Machine Learning based for Diabetes Care
3. Explain the role of Natural Language Processing Applications in Finance

Course Outcome2(CO2)

1. Which of the following techniques can be used for key word normalization in NLP, the process of converting a keyword into its base form?

- a. Lemmatization
- b. Soundex
- c. Cosine Similarity
- d. N-grams

Interpret your answer.

2. Explain any two out of the eight methods that **Convert Text to Features**

- a. Recipe1. One Hot encoding.
- b. Recipe2. Count vectorizer.
- c. Recipe3. N-grams.
- d. Recipe4. Co-occurrence matrix.
- e. Recipe5. Hash vectorizer.
- f. Recipe6. Term Frequency-Inverse Document Frequency (TF-IDF)

g. Recipe7.Word embedding.

h. Recipe8.Implementing fast Text.

3. Explain the following with an example

a. Regular expression and its working

b. Properties of regular expression

c. Meta characters Big brackets[]and search[abcd]in _kasdfaibcasdfaabc'and write the output

d. Let's look at the following sentence:—Iateanappleandplayedthepiano.I Generate the one-hot embedding matrix for this sentence

CourseOutcome3(CO3):

- a. Implement TF-IDF from scratch
- b. Explain how you will implement NLP in other languages
- c. Explain Markov Model for text classifier and build a text classifier using the Markov model

Example:Take two sets of poems by two different authors,Edgar Allan Poe and RobertFrost. Given a sentence, the system should be ableto predict the author

Course Outcome4(CO4):

1. Application :Latent Semantic Indexing for Search Engine Optimizationusing PCA/SVD
2. Implement ANN formulticlass classification
3. Implement SpamDetection using NaïveBayes or Logistic regression

CourseOutcome5(CO5):

1. Implement Text Summarization using python
2. How will you implement a sentiment analyzer in Python using logistic regression to predict sentiment on Amazon reviews?
3. Application: Topic Modeling Using Latent Dirichlet Allocation

ModelQuestionPaper

QPCODE:

Reg No: _____

Name: _____ **PAGES:4**

APJABDULKALAMTECHNOLOGICALUNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION,MONTH&YEAR

CourseCode: 25PADT103

Course Name:INTRODUCTION TO AI AND NLP

Max.Marks:60

Duration:2.5Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1.	a.Contrast NLTK and Spacy	5
	b.Explain the different types of artificial Intelligence	
2.	a.Analyse the importance of the concept of vectors in NLP	5
	b.Explain the simple functioning of the ELIZA chatbot	
3.	Explain Markov Property and Markov model for NLP	5
4.	Discuss topic modeling and the intuition behind using LDA for topic modeling	5
5.	Describe implementing binary text classification using Tensor Flow	5
		(5x5=25)

Part B

(Answer any five questions.Each question carries 7marks)

6.	(a) Explain the applications of Artificial intelligence in Healthcare	(7)

7. (a) Elaborate vectors, their usefulness in NLP, tokenization, stopwords, stemming, and lemmatization with examples (3)
- (b) Explain the limitations of the count vectorizer and the necessity of TF-IDF (2)
- In a corpus of N documents, one randomly chosen document contains a total of T
- (c) terms, and the term—hellol appears K times. What is the correct value for the Product of TF (term frequency) and IDF (inverse-document-frequency), If the term —hellol appears in approximately one-third of the total documents?
8. (a) Explain the regular expression and need for a regular expression in NLP (3)
- (b) How do regular expressions work? (2)
- (c) Explain the use of common Regex functions used in NLP (2)
9. (a) Explain the language model, applications of language modeling, method to Compute the probability of a sentence, and the curse of dimensionality (2)
- (b) What Is Markov's assumption in language modeling and n-grams (3)
- (c) Implement n-grams and update-function (2)
10. (a) Explain the spam detection problem and why you want to detect them (2) (3)
- (b) Apply the Markov model n-gram approach to solve this problem and implement in Python (4)
11. (a) Explain RNN for text classification in TensorFlow (2)
- (b) Explain Parts of Speech (PoS) Tagging in TensorFlow (3)
- (c) Explain Named Entity Recognition in TensorFlow (2)
12. (a) Explain CNN for text classification (7)

Syllabus

Module	Contents	Total Lecture Hours (40hrs)
1	INTRODUCTION TO ARTIFICIAL INTELLIGENCE: Artificial Intelligence? History, AI on a conceptual level, Types of AI, Use Cases, importance and applications of AI, AI algorithms, types of machine learning, types of problems solved in AI, advantages, and disadvantages of AI, AI In Marketing, Banking, Finance, Agriculture, HealthCare, Gaming, Space Exploration., Autonomous Vehicles, Chatbots, Artificial Creativity, AI Tools & Frameworks, AI vs Machine Learning vs Deep Learning, an overview of python for AI, INTRODUCTION TO NLP: NLP in the Real World, NLP Tasks, Language? Its Building Blocks, Why Is NLP Challenging? Machine Learning, Deep Learning, and NLP: An Overview, Approaches to NLP, Heuristics-Based NLP, Machine Learning & Deep Learning for NLP, NLP Pipeline, Applications of NLP-Machine translation, Speech recognition, Image Captioning, spam detection, text prediction- Introduction to Software Packages-Spacy, NLTK, Gensim, PyTorch, Regular Expression- importance, properties, working and python package (re), case study: working of Eliza chatbot	7
2	REGULAR EXPRESSION & TEXT PROCESSING: Common regex function, Meta Characters- Big brackets, cap, Backslash, Squared Brackets, Special Sequences, Asterisk, Plus, And Question mark, Curly Brackets Understanding Pattern Objects- Match Method Vs Search Method, Finditer Method, Logical Or, Beginning And End Patterns, Parenthesis String Modification- split method, sub- method, subn method, Text Processing-Words, Tokens, Counting words, vocabulary, corpus, tokenization in spacy- Sentiment Classification- (yelp) download a review dataset use data preparation using NumPy, pandas, counter, re- add tokens to vocabulary, build vocabulary from a data frame, from corpus, one hot encoding, encoding documents, train test splits, feature computation, confusion matrix, analysis. Language Independent Tokenization: Types of tokenization — Word, Character, and sub-word tokenization, problems with word tokenizer, drawbacks of a character- based tokenizer, problems with sub-word tokenization, Byte Pair Encoding, , String Matching and Spelling Correction-Minimum edit distance- table filling, dynamic programming,	9
	WORD EMBEDDING&PROBABILISTIC MODELS:Vector Models&Text Preprocessing: Vectors, Bag of Words, Count Vectorizer, Tokenization,Stopwords, Stemming, and Lemmatization, Stemming, and Lemmatization, Count Vectorizer, Vector Similarity. TF-IDF, Word-to-Index Mapping, Building TF-IDF, Neural Word Embeddings,Neural Word Embeddings.Vector Models Text Pre-Processing Summary,steps of NLP analysis,Probabilistic Models-Language	9

3	Modelling: importance, types of language modeling, the curse of dimensionality, Language Model Markov Assumption And N-Grams, Language Model Implementation – Setup, Ngrams Function, Update Counts Function, Probability Model Function, ReadingCorpus, LanguageModel Implementation Sampling Text, Markov Models: Markov Property, Markov Model, Probability Smoothing and Log-Probabilities, Building a TextClassifier, Article Spinning – Problem, N-Gram Approach, implementation, Cipher Decryption with Language Modeling And Genetic Algorithm Ciphers, substitution cipher, bigrams, maximum likelihood, and log-likelihood, Language models, Genetic Algorithms,	
4	NLP USING MACHINE LEARNING MODELS-Spam Detection– Problem, Naive Bayes theorem, Intuition, spam detection using Naïve Bayes, class imbalance, ROC, AUC, AND F1 SCORE, Implementing spam detection in python, Sentiment Analysis -Problem, Logistic Regression Intuition, Multiclass Logistic Regression, Logistic Regression Training and Interpretation, sentiment analysis implementation in python, Text Summarization-Using Vectors, Text Rank Intuition, Text Rank in Python, Text Summarization in Python Topic Modeling- different topic modeling techniques, Latent Dirichlet Allocation (LDA)–Essentials, Latent Dirichlet Allocation–Topic Modeling with Latent Dirichlet, Latent Symmetric Modelling (Indexing)-LSA / LSI Introduction, Singular Value Decomposition Intuition, LSA / LSI: Applying SVD to NLP, Latent Semantic Analysis / Latent Semantic Indexing in Python	7
5	DEEP LEARNING- word embeddings, nonlinear neural networks, Neuron –Intro, Fitting a Line, Classification Code Preparation, Text Classification in Tensorflow, The Neuron, How does a model learn?, Feed Forward Neural Networks- Ann-introduction, The Geometrical Picture, Activation Functions, Multiclass Classification, Text Classification ANN in Tensorflow, Text Preprocessing Code Preparation, Text Preprocessing in Tensorflow, Embeddings, CBOW (continuous bag of words), CBOW in Tensorflow, Convolution Neural Networks- Convolution, pattern matching, weight sharing, convolution in color images, CNN Architecture, CNN for Text, CNN for NLP in Tensorflow, Recurrent Neural Networks- Simple RNN / Elman Unit, RNNs: Paying Attention to Shapes, GRU, and LSTM. RNN for Text Classification in TensorFlow, Parts-of-Speech Tagging, and Named Entity Recognition in TensorFlow	8

25PADT111	DATA ANALYTICS	CATEGORY	L	T	P	CREDIT
		PEC-2	3	0	0	3

Preamble:

This course enables the students to understand the concepts of Data Analytics. It covers Data and Relations, Correlation, Basic Data Analytics and visualization methods using R, Finite State Machines, Dimensionality reductions, Feature extraction, Clustering, Classification and Regression Techniques, and scalability through parallelization. It helps the learners to develop applications for real time data analysis.

Course Outcomes:

After the completion of the course the student will be able to

CO1	Identify data errors and dependencies among attributes by modelling the assets & relations. (Cognitive Knowledge Level: Apply)
CO2	Apply statistical methods for evaluation hypothesis (Cognitive Knowledge Level: Apply)
CO3	Apply regression, classification, and clustering models on a given dataset (Cognitive Knowledge Level: Apply)
CO4	Apply correlation techniques to find the dependencies between the features. (Cognitive Knowledge Level: Apply)
CO5	Develop applications that use the concepts in Data Analytics (Cognitive Knowledge Level: Create)

Program Outcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects.

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	60-80%
Analyse	20-40%

Evaluate	
Create	

Assignments or course projects can be used for higher level assessment of course outcomes.

Markdistribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

Continuous Internal Evaluation:40marks

- i. Preparing a review article based on peer reviewed original publications (minimum10 publications shall be referred) :15marks
- ii. Course base dtask/Seminar/Data collection and interpretation :15marks
- iii. Test paper(1number) :10 marks

Test paper shall include minimum80%of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part Awill contain5 numerical/short answer questions with 1question from each module, having 5marks for each question.Students should answer all questions.Part B will contain7

questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. How to model stochastic and deterministic errors. Explain with examples.
2. What are the ways in which various errors can be handled?

Course Outcome 2 (CO2):

1. What R commands would you use to remove null values from a dataset.
2. Which function R can be used to fit a nonlinear line to the data.

Course Outcome 3 (CO3):

1. Consider the data sets for two classes $X_1 = \{(0,0)\}$ and $X_2 = \{(1,0), (0,1)\}$. Which classification probabilities will a naive Bayes classifier produce for the feature vector (0,0)?
2. Explain SVM classifier with an example.

Course Outcome 4 (CO4):

1. For the dataset $X = \{(1,0), (2,0), (3,1), (4,1), (5,1), (6,1), (7,0), (8,0)\}$ compute chi-Square test statistic for 4 bins.
2. Explain the difference between correlation and causality.

Course Outcome 5 (CO5):

1. Develop a small application for a manufacturing industry to maintain their works using the concepts in data analytics.
2. Develop a small application for improving Transportation System using the concepts in data analytics.

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ **PAGES:2**

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER M. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT111

Course Name: DATA ANALYTICS

Max. Marks: 60

Duration: 2.5

Hours

PART A

Answer All Questions . Each Question Carries 5 Marks

1. Compute the output of (a) an asymmetric moving mean filter, $q=3$, (b) an asymmetric moving median filter, $q=3$, (c) an exponential filter, $y_0=0$, Correction term $n=0.5$ for the time series $(0,0,0,1,0,0,0)$. Which filter result do you like best?
2. Differentiate between Type I and Type II errors.
3. Construct the data tuples for an autoregressive forecasting model with a time horizon of $m = 2$ for the time series $x = (1,2,3,5,8)$.
4. Explain prototype-based clustering.
5. Explain Rectified linear activation unit. **(5x5=25)**

PartB

(Answer any five questions.Each question carries7 marks)

6. Explain stochastic and deterministic errors with examples. Using 2-sigma rule and m-sigma rule how a value is classified as outliers? (7)
7. Consider the datasets for two classes $X_1=\{(0,0)\}$ and $X_2=\{(1,0),(0,1)\}$. Which classification probabilities will a naive Bayes classifier produce for the Feature vector $(0,0)$? (7)
8. Illustrate the importance of visualizing data before analysis. (7)
9. What is feature scaling? Explain the feature scaling techniques. (7)
10. Justify how the computational complexity of the nearest neighbor is reduced by the LVQ approach. (7)
11. For the data set $X=\{(1,0),(2,0),(3,1),(4,1),(5,1),(6,1),(7,0),(8,0)\}$ Compute chi-square test statistic for 4 bins. (7)
12. Consider the two-dimensional patterns $(2,1),(3,5),(4,3),(5,6),(6,7),(7,8)$. (7)

Compute the principal component using PCA Algorithm. Use PCA Algorithm to transform the pattern $(2, 1)$ onto the Eigen vector.

Syllabus: Error Handling, Correlation, Models, Clustering, Data and Process Parallelization, Batch processing frameworks.

	Syllabus	
Module	Content	Hours
1	Data and Relations - Data scales, Set and Matrix representations, Relations, Similarity and dissimilarity measures, Sequence relations. Data pre-processing - Error types, error handling, filtering, transformation, merging. Correlation - Linear, Causality, Chi-Square tests. Cross validation and feature selection.	7
2	Basic Data Analytics Methods Using R- Descriptive Statistics, Statistical methods for evaluation, Hypothesis Testing, ANOVA. Visualization methods using R- Exploratory Data Analysis, visualizing single Variable, Examining Multiple Variables	9
3	Models- Finite state machines, Recurrent models, Autoregressive models, Moving Average Models.	6
4	Clustering - Cluster partitions, Sequential clustering, Prototype based clustering, Relational clustering, Cluster tendency assessment, Cluster validity, Self-organising map (SOP). Use Cases Regression- Linear Regression, Logistic regression, Use Cases	7
5	Classification Methods- Naive Bayes classifier, Decision Trees, LDA, SVM, Learning Vector Quantization. Scalability through parallelization - Data parallelization, Process parallelization, Scaling using feature engineering, Dimensionality Reduction, Cascading, Feature reduction through spatial transforms. Global Average Pooling, Data Augmentation, Case Studies: ReLU nonlinearity, MLP, Convolutional Layer.	11

25PADT112	R FOR DATA SCIENCE	CATEGORY	L	T	P	CREDIT
		Program Elective1	3	0	0	3

Preamble:

The course introduces the R programming environment and its use in Data Science. It covers data loading and organization, data exploration and cleaning, building machine learning models, statistical models, and documentation and data visualization using R. The course enables learners to use R programming in data analytics related tasks for making predictions.

Course Outcomes:

After the completion of the course the student will be able to

CO 1	Organize, explore, clean and analyse data to find relative patterns in data. (Cognitive Knowledge Level: Apply)
CO 2	Design different machine learning models to make predictions from data. (Cognitive Knowledge Level: Apply)
CO 3	Demonstrate the patterns in data using various data visualization packages. (Cognitive Knowledge Level: Apply)
CO4	Build prediction models for different types of data, evaluate and validate them. (Cognitive Knowledge Level: Apply)
CO5	Apply R programming skills to solve real-life data analytics problems. (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects.

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	60
Analyse	40
Evaluate	-
Create	-

Assignments or course projects can be used for higher level assessment of course outcomes.

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- ii. Course based task / Seminar / Data collection and interpretation : 15 marks
- iii. Test paper (1 number) : 10 marks

Test papers shall include minimum 80% of the syllabus.

Course based task / test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Given a vector of values, demonstrate how would you convert it into a time series object?
2. If $x = c(1, 2, 3, 3, 5, 3, 2, 4, NA)$, what are the levels of factor(x)?
3. Write a custom function which will replace all the missing values in a vector with the mean of values.

Course Outcome 2 (CO2)

1. Demonstrate the use of any five generic functions for extracting model information.
2. Elaborate on how an ANOVA model can be used for data analysis.
3. Describe how to fit a non-linear regression model in R.

Course Outcome 3(CO3):

1. With the help of an example, show how to create a scatter plot using R libraries.
2. Analyse the type of chart to be used when trying to demonstrate the relationship between variables/parameters.
3. Suggest scenarios where you would use a bar chart and a histogram. Justify.

Course Outcome 4(CO4):

1. Suppose, given a dataset $(x_1, y_1), (x_2, y_2), (x_3, y_3) \dots (x_n, y_n)$ of observations from an experiment, fit a straight line $y = a + bx$ to the given data.
2. Compare the situation where you want to compare your data distribution with another. How would you accomplish using R, the scenario where you need to check if a sample follows a normal distribution or not or if two samples are drawn from the same distribution?
3. Given a dataset, elaborate on how you would choose a suitable model for prediction. Justify your answer.

Course Outcome 5(CO5):

1. Write an R program to read a given dataset, clean the data, organize the data and build a suitable machine learning model to make predictions. Also, evaluate and validate the model.
2. Suppose you are asked to build a model for spam detection, discuss about the method you would follow if you would prefer using: a) supervised learning method b) an unsupervised learning approach. Analyse which one would be better.
3. Choose any real-life scenario and apply R programming skills to develop a good machine learning model for making predictions. Also, evaluate the performance of your model.

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ PAGES:4

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT112

Course Name: R for Data Science

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Demonstrate the working of which function in vectors with the help of suitable examples.
Compare and contrast list and data frames.
2. Elaborate the concept of generalized linear model and the use of glm () function.
4. With the help of a suitable example, illustrate how accuracy of a model is evaluated.
5. Show how the different plot functions in R could be used for data visualization. (5x5=25)

Part B

(Answer any five questions. Each question carries 7 marks)

6. Illustrate any five vector methods with appropriate examples. (7)
7. Write an R code to generate an upper triangular matrix in R. Convert the same into a lower triangular matrix. (7)
8. Compare linear regression and logistic regression. Explain how to create a linear regression model in R. (7)
9. The number of awards earned by students at one high school. Predictors of the number of awards earned include the type of program in which the student was enrolled (e.g., vocational, general or academic) and the score on their final exam in math. Select a suitable regression model to perform the analysis. Also write the code for the same. (7)
10. Describe the common probability distribution functions in R and their applications. (7)
11. Justify the use of scatter plot in data analytics by quoting a suitable application. (7)

- 12 Given is the `_diamonds` dataset in R which is part of the `ggplot2` library. It contains prices of approximately 50000 round cut diamonds. How would you use an approach to plot a histogram that will display a type of diamonds based on the quality of cut (Ideal, Premium, Very Good, Good and Fair)?

Syllabus

	Syllabus	
Module	Content	Hours
1	Introduction - Reading and getting data into R, Vectors and assignment, Logical and Index vectors, Generating regular sequences, Missing values, Ordered and Unordered Factors, The function <code>tapply()</code> and ragged arrays, Ordered factors.	9
2	Exploring and cleaning data for analysis - Reading data from files, Data organization, Arrays and Matrices, Basics of Arrays in R, Matrix operations, Advanced Matrix operations, Additional Matrix facilities, Lists and Data frames.	11
3	Building machine learning models - Building linear models, Generalized linear models, Nonlinear least squares and maximum likelihood models.	8
4	Evaluating and Validating models - Evaluating and Validating models, Probability distributions in R, Statistical models in R.	5
5	Data Visualization - Documentation, Graphical analysis, <code>plot()</code> function, Displaying multivariate data, Using graphics parameters, Matrix plots, Exporting graphs, <code>ggplot</code> package.	7

25PADT113	Data visualization with python	CATEGORY	L	T	P	CREDIT
		Program Elective1	3	0	0	3

Preamble: This course is intended to provide basic concepts of Data Visualization. This course helps students learn visualization libraries in python and apply them to obtain and understand the underlying information. This course helps students to implement the visualization techniques to build an interactive dashboard

Course Outcomes:

After the completion of the course, the student will be able to

CO1	Analyze the need for data Visualization in Data Analytics (Cognitive knowledge level: Apply)
CO2	Identify the right tool for Data Visualization based on the Data Analytics Problem (Cognitive knowledge level: Apply)
CO3	Utilize the right visualization technique to obtain information, knowledge, and insight from a particular Dataset. (Cognitive knowledge level: Apply)
CO4	Implement Visualization tasks using Python (Cognitive knowledge level: Apply)
CO5	Apply Plotly to create plots like Bar Charts, Line Charts, Scatter Plots, and Heat Maps, and create and deploy an interactive dashboard (Cognitive knowledge level: create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively and write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor's program

PO4: An ability to apply stream knowledge to design or develop solutions for real-world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tools to model, analyze and solve practical engineering problems.

PO6: An ability to engage in lifelong learning for the design and development related to the stream-related problems taking into consideration sustainability, societal, ethical, and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

The end semester examination will be conducted by the respective College. There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such

questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long

answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. a. Distinguish count histogram, relative frequency histogram, cumulative frequency histogram, and density histogram
b. For what type of data is a Histogram plot usually used?
c. Explain the various features that you can find from Histogram plots
2. a. Explain the significance of Box plots
b. List the information you could gain from a box plot.
3. a. What is a scatter plot? For what type of data is a scatter plot usually used?
b. List the features that might be visible in scatter plots
c. Choose the type of plot you would like to use if you need to demonstrate —the relationship between variables/parameters

Course Outcome 2 (CO2)

1. Explain the different types of Data Structures available in pandas and the advantages of pandas
2. Explain the methods of choosing the right visualization tool
3. Explain the different types of data and level of measurement and how they influence a data analyst to choose a chart for the data he would like to visualize

Course Outcome 3 (CO3):

1. Discuss the different data types, NumPy can support and discover changing the type of the variable affects the data it stores.
2. Explain the grouping and aggregation methods in pandas
3. Look at the following data

country	continent	year	lifeExp	pop	gdpPerCap

Max.Marks:60		Duration:2.5Hours
PART A(5x5)		
Answer All Questions. Each Question Carries 5 Marks		
1.	Explain the importance of Data Visualization	5
2.	Write a Pandas program to get the powers of array values element-wise. Note: First array elements raised to power the form the second array Sample data: {'X': [78,85,96,80,86], 'Y': [84,94,89,83,86], 'Z': [86,97,96,72,83]} Write the sample output	5
3.	Explain the methods to convert String to date.	5
4.	a. Create a scatter plot of 1000 random data points. b. Explain the steps to make a CSV file update automatically	5
5.	a. Compare plotly and matplotlib b. Define univariate distributions and graphs for visualizing univariate distributions	5
Part B		
(Answer any five questions. Each question carries 7 marks)		
6.	(a) Explain the different types of Data Visualization charts.	(7)
7.	(a) a. Explain the data frame in Pandas	(3)
	(b) Explain the following data frame methods and computations with examples i. Min and Max ii. Sum and Count iii. Mean, Median and Mode iv. Describe with Numeric values v. Describe with Object (with) Text values	(4)
8.	(a) Write a Pandas program to get the first 3 rows of a given DataFrame. Sample Data Frame: exam_data = {'name': ['Anastasia', 'Dima', 'Katherine', 'James', 'Emily', 'Michael', 'Matthew', 'Laura', 'Kevin', 'Jonas'], 'score': [12.5, 9, 16.5, np.nan, 9, 20, 14.5, np.nan, 8, 19], 'attempts': [1, 3, 2, 3, 2, 3, 1, 1, 2, 1], 'qualify': ['yes', 'no', 'yes', 'no', 'no', 'yes', 'yes', 'no', 'no', 'yes']} labels = ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j'] Write the sample output	(3)

	(b)	What is the name of pandas library tools used to create a scatter plot matrix?	(1)
	(c)	Write a Pandas program to merge two given dataframes with different columns and give a sample output TestData: data1: <pre>key1 key2 PQ 0 K0 K0 P0 Q0 1 K0 K1 P1 Q1 2 K1 K0 P2 Q2 3 K2 K1 P3 Q3</pre> data2: <pre>key1 key2 RS 0 K0 K0 R0 S0 1 K1 K0 R1 S1 2 K1 K0 R2 S2 3 K2 K0 R3 S3</pre>	(3)
9.	(a)	Elucidate the method of creating a Scatter Plot with several colors in Matplotlib with the help of an example	(2.5)
	(b)	Explain the method of adding a legend to a scatter plot in Matplotlib	(2)
	(c)	Explain the method of increasing the size of scatter points in Matplotlib	(2.5)
10	(a)	Explain Time Series in pandas	(2)
	(b)	How will you create a series from dict in Python?	(2)
	(c)	Explain the following operations on Series in pandas. Build a dashboard using data from a CSV file - Concatenating series - Concatenating series by indexing - Concatenating series by column - Dataframe Merge() method	(3)
11	(a)	Build a dashboard using data from a CSV file	(7)
12	(a)	What is an interactive dashboard?	(1)
	(b)	Explain Dash Components: HTML components, core components, and Markdown, Using Help() with Dash	(3)
	(c)	Explain Single Callback for Interactivity	(3)

Syllabus

Mod	Content	Hrs
1	PYTHONVISUALIZATIONCHARTS&INTRODUCTIONTONUMPYAND PANDAS: Data visualization, importance, advantages, Categories and tools, design principles, listing libraries of python, JavaScript, and R, Dimensions and measures, types of data, visualizing charts using python, general theory, creation, interpretation, conditions, and disadvantages- Bar chart, Pie chart, stacked areachart, Line chart, Histogram, scatter plot, regression plot, Combining Bar and Line chart, Numpy –Array, NaNand INF, Statistical Operations, Shape, Reshape, Ravel, Flatten, Sequence, Repetitions, and Random Numbers, Where, File Read and Write, Concatenate and Sorting, Dates, Pandas -Data Frame and Series, File Reading and Writing, Info, Shape, Duplicated, and Drop, Columns, NaN and Null Values, Imputation, Lambda Function,	8
2	PANDAS- Statistical functions, Data Visualisation With Pandas- Line Plot, Bar Plot, Stacked Plot, Histogram, Box Plot, Area and Scatter Plot, Hex and Pie Plot, Scatter Matrix and Subplots, Series And Columns -Selecting A Single and multiple Column, Series Methods, The powerful value_counts() method, Using plot() to visualize Indexing And Sorting - Set_Index Basics, set_index: The WorldHappiness Index Dataset, setting index with read_csv, sort_values intro, sorting by multiple columns, sorting text columns, sort_index, Sorting and Plotting!, loc, iloc, loc& iloc with Series, Filtering Data Frames - Filtering data frames with a Boolean series, Filtering With Comparison Operators, The Between Method, The isin() Method, Combining Conditions Using AND (&). Combining Conditions Using OR (), Bitwise Negation, isna() and notna() Methods, Creating and Adding, dropping, And Removing Columns and rows	8
3	PANDAS & MATPLOTLIB: UPDATING VALUES -Renaming Columns and Index Labels, The replace () method, Updating Multiple Values Using loc[],Updates With loc[] and Boolean Masks, Working With Types :- Casting Types With astype(), Introducing the Category Type, Casting With pd.to_numeric(), dropna() and isna(), fillna(), Working With Dates And Times Matplotlib –LinePlot, Label, Scatter, Bar, and Hist Plots, Box Plot, Subplot, Pie Plot Text Color, Nesting,&Labeling, Bar Chart, Line plot &Scatter plot on Polar Axis, Animation Plot, Pandas Plotting –Changing Plot Styles, Adding Labels and Titles, rename (),Multiple plots on The Same Axes, Automatic Subplots, Manual Subplots With Pandas,Exporting Figures With savefig(), Grouping And Aggregating	8
4	PANDAS & SEABORN: PANDAS: Hierarchical Indexing in pandas, working with Text in pandas, Pandas- Apply, Map and Applymap-, Combining Series and Dataframes- Seaborn: - The Helpful load_dataset () method, Seaborn Scatterplots, Line plots. The relplot () Method, Resizing Seaborn Plots: Aspect & Height, Histograms, KDE Plots, Bivariate Distribution Plots, Rugplots, The Amazing displot () Method. Seaborn Categorical Plots - Countplot, Strip & Swarm Plots, Boxplots, Boxenplots, Violinplots, Barplots, The Big Boy Catplot Method, Controlling Seaborn Aesthetics - Changing Seaborn Themes, Customizing Styles with set_style(), Altering Spines With despine(), Changing Color Palettes	6
5	PYTHONDASHBOARDWITHPLOTLYANDDASH:PLOTLYBASICS-	10

	Plots, Line Charts, Bar Charts, Bubble Plots, Box Plots, Histograms, Distplots,, Heatmaps, DASH BASICS –dash layouts, - styling, Converting Simple Plotly Plot to Dashboard with Dash, create a simple dashboard, Dash Components , HTML Components, Core Components, Markdown with Dash, Using Help() with Dash INTERACTIVE COMPONENTS- Single Callbacks for Interactivity, Dash Callbacks for Graphs, Multiple Inputs &Outputs, Controlling Callbacks with Dash State, INTERACTING WITH VISUALISATION -Hover Over Data, Click Data, Selection Data, Updating Graphs on Interactions- Project: Building an Interactive dashboard with Plotly and Dash	

CoursePlan

S.N O	TOPIC	NO. OF LECTURES
MODULE 1-PYTHONVISUALIZATIONCHARTS&INTRODUCTIONTONUMPYAND PANDAS:8hours		
1.1	Data visualization, importance, advantages, Categories and tools, design principles, listing libraries of python, JavaScript, and R, Dimensions and measures, types of data,	1
1.2	visualizingchartsusingpython,generaltheory,creation,interpretation,conditions, and disadvantages- Bar chart, Pie chart,	1
1.3	Stackedareachart,Linechart	1
1.4	Histogram,scatterplot	1
1.5	Regressionplot,CombiningBarandLinechart,	1
1.6	NUMPY –Array, NaN and INF, Statistical Operations, Shape, Reshape, Ravel, Flatten, Sequence, Repetitions, and Random Numbers, Where, File Read and Write, Concatenate and Sorting, Dates,	1
1.7	PANDAS -DataFrameandSeries,FileReadingandWriting,Info,Shape, Duplicated, and Drop, Columns,	1
1.8	NaNandNullValues,Imputation,LambdaFunction,	1
MODULE2-PANDAS-8hours		
2.1	PANDAS -Statisticalfunctions	1
2.2	DataVisualisationWithPandas -LinePlot,BarPlot,StackedPlot,Histogram, Box Plot, Area and Scatter Plot, Hex and Pie Plot, Scatter Matrix and Subplots,	1
2.3	SeriesAndColumns -SelectingASingleandmultipleColumn,SeriesMethods, The powerful value_counts() method, Using plot() to visualize	1
2.4	SelectingMultipleColumns,Thepowerfulvalue_counts()method,Usingplot() to visualize!, EXERCISE: Series & Plotting	1
2.5	Indexing And Sorting - Set_Index Basics, set_index: The World Happiness Index Dataset, settingindex withread_csv, sort_values intro,sorting bymultiple columns, sorting text columns, sort_index, Sorting and Plotting, loc, iloc, loc & iloc with Series	1

2.6	FilteringDataFrames -FilteringdataframeswithaBooleanseries,Filtering With Comparison Operators, The Between Method, The isin() Method,	1
2.7	CombiningConditionsUsing AND (&).CombiningConditionsUsingOR (), Bitwise Negation, isna() and notna() Methods,	1
2.8	CreatingandAdding,dropping,AndRemovingColumnsandrows	1
MODULE3-PANDAS&MATPLOTLIB-8hours		
3.1	UpdatingValues -RenamingColumnsandIndexLabels,Thereplace()method, Updating Multiple Values Using loc[], Updates With loc[] and Boolean Masks	1
3.2	WorkingWithTypes :-CastingTypesWithastype(),IntroducingtheCategory Type, Casting With pd.to_numeric(), dropna() and isna(), fillna(),	1
3.3	WorkingWithDatesAndTimes	1
3.4	Matplotlib –LinePlot,Label,Scatter,Bar,andHist Plots,Box Plot, Subplot, Pie Plot Text Color, Nesting,&Labeling,	1
3.5	BarChart,Lineplot&ScatterplotonPolarAxis,AnimationPlot,	1
3.6	PandasPlotting –ChangingPlotStyles,AddingLabelsandTitles,rename(), Multiple plots on The Same Axes, Automatic Subplots,	1
3.7	ManualSubplotsWithPandas,ExportingFiguresWithsavefig(),	1
3.8	GroupingAndAggregating	1
MODULE4-PANDAS&SEABORN-6hours.		
4.1	PANDAS :HierarchicalIndexinginpandas	1
4.2	WorkingWithTextinpandas	1
4.3	Pandas-Apply,MapAndApplymap	1
4.4	CombiningSeriesAndDataframes-	1
4.5	SEABORN : - The Helpful load_dataset () method, Seaborn Scatterplots, Line plots. The relplot() Method, Resizing Seaborn Plots: Aspect & Height, Histograms, KDE Plots, Bivariate Distribution Plots, Rugplots, The Amazing displot() Method	1
4.6	SEABORN CATEGORICAL PLOTS - Countplot, Strip & Swarm Plots, Boxplots, Boxenplots, Violinplots, Barplots, The Big Boy Catplot Method, CONTROLLING SEABORN AESTHETICS - Changing Seaborn Themes, Customizing Styles with set_style(), Altering Spines With despine(), Changing Color Palettes	1
MODULE5-PYTHONDASHBOARDSWITHPLOTLYANDDASH=10hours		
5.1	PLOTLYBASICS -Plots,LineCharts	1
5.2	BarCharts,BubblePlots,BoxPlots	1
5.3	Histograms,Distplots,,Heatmaps,	1
5.4	DashBasics –dashlayouts,-styling,ConvertingSimplePlotlyPlotto DashboardwithDash, creatingasimpledashboard, DashComponents ,HTML	1

	Components,CoreComponents,MarkdownwithDash,UsingHelp()withDash	
5.5	InteractiveComponents -SingleCallbacksforInteractivity,DashCallbacksfor Graphs	1
5.6	MultipleInputs&Outputs,ControllingCallbacks withDashState,	1
5.7	INTERACTINGWITHVISUALISATION-HoverOverData,ClickData	1
5.8	SelectionData,UpdatingGraphsonInteractions	1
5.9	Project:BuildinganInteractivedashboardwithPlotlyandDash	1
5.10	Project:BuildinganInteractivedashboardwithPlotlyandDash	1

25PADT114	REINFORCEMENT LEARNING	CATEGORY	L	T	P	CREDIT
		Program Elective1	3	0	0	3

Preamble:

This course provides the basic concepts and advanced techniques in reinforcement learning. This course covers policies and value functions, Q-learning, function approximation and policy optimization methods. This course helps the learners to acquire key skills required to develop applications in the exciting area of reinforcement learning.

Course Outcomes:

After the completion of the course, the student will be able to

CO 1	Utilize the key features of reinforcement learning to develop machine learning applications. (Cognitive knowledge level: Apply)
CO 2	Explore suitable learning tasks to which RL techniques can be applied. (Cognitive knowledge level: Apply)
CO 3	Apply core principles behind the RL, including policies, value functions, deriving Bellman equations. (Cognitive knowledge level: Apply)
CO 4	Implement and analyze approximate solutions (Cognitive knowledge level: Analyze)
CO 5	Analyze current advanced techniques and applications in RL (Cognitive knowledge level: Analyze)
CO 6	Practice using popular open-source library for implementing RL algorithms. (Cognitive knowledge level: Apply)

Program Outcomes (POs)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problem taking into considerations sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	60-80

Analyse	20-40
Evaluate	Can be evaluated using Miniprojects/assignments
Create	Can be evaluated using Miniprojects/assignments

Markdistribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5hours

ContinuousInternal Evaluation Pattern:

Evaluationshallonlybebasedonapplication, analysisordesign-basedquestions (for both internal and end semester examinations).

ContinuousInternalEvaluation:40marks

- i. Preparingareviewarticlebasedonpeerreviewed originalpublications (minimum 10 publications shall be referred): 15 marks
- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation:15marks
- iii. Testpaper(1number):10marks

Testpapershallincludeminimum80%ofthe syllabus.

Coursebasedtask/testpaperquestionsshallbeusefulinthetestingofknowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

TheendsemesterexaminationwillbeconductedbytherespectiveCollege.

Therewillbetwoparts; PartAandPartB.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. List the elements of reinforcement learning.
2. Explain multi-armed bandit problems.
3. Explain action-value methods.

Course Outcome 2 (CO2)

1. Give examples of Markovian and non-Markovian environments.
2. What are the advantages and disadvantages of value methods vs policy methods?
3. Imagine that the rewards are at most 1 everywhere. What is the maximum value that the discounted return can attain? Why?

Course Outcome 3 (CO3):

1. Describe Monte Carlo prediction, estimation and control.
2. For Q-learning to converge we need to correctly manage the exploration vs. exploitation tradeoff. What property needs to be held for the exploration

strategy?

3. With respect to the expected Sarsa algorithm, is exploration required as it is in the normal Sarsa and Q-learning algorithms? Justify.

Course Outcome 4 (CO4):

1. Describe value function approximation.
2. Justify the use of deep neural networks in nonlinear function approximation.
3. In the context of λ -return, differentiate between simple update and compound update.

Course Outcome 5 (CO5):

1. State the policy gradient theorem.
2. Compare two versions of actor-critic algorithms.
3. What are the basic elements of OpenAI Gym environment.

Learning

Max.Marks:60

Duration:2.5Hours

PARTA

AnswerAllQuestions.EachQuestionCarries5 Marks

1. Describebrieflytheelementsofreinforcementlearning.
2. WritedowntheBellmanexpectationequationforstate-valuefunctions.
3. Drawthebackupdiagramfor2-stepQ-learning. Writethe corresponding learning rule for 2-step Q-learning.
4. Compareandcontrastanytwolinearmethodsusedforfunctionapproximation.
5. Statethepolicygradienttheorem anditsapplications. (5x5=25)

PartB

(Answeranyfivequestions.Eachquestioncarries7 marks)

6. Describe the principles behind incremental implementation of computations for estimated action values. Give a simple algorithm for the same. (7)
7. Distinguish between policy iteration and value iteration. Give relevant algorithms. (7)
8. Why is Q-learning considered an off-policy control method? (7)
9. Demonstrate how polynomial function approximation can be helpful in a reinforcement learning problem having 3 dimensional states. (7)
10. Derive the REINFORCE policy-gradient learning algorithm. (7)
11. Prove that the approximation for the λ -return becomes exact if the approximate value function does not change. (7)
12. Provide pseudocode of the actor-critic algorithm that uses eligibility traces. (7)

Syllabus

Module 1: Introduction to reinforcement learning (8 hours)
Introduction to RL, Examples, Elements of RL, Multi-armed bandit problems, Action-value methods, The ten-armed testbed, Incremental implementation
Module 2: Policies and value functions (8 hours)
Markov Decision Process, Goals and rewards, Returns and episodes, Policies and value functions, Policy evaluation, Policy improvement, Policy iteration, Value iteration
Module 3: Q-learning (8 hours)

MonteCarlo prediction, estimation and control, TD prediction, Sarsa, Q-learning, n-step TD prediction, n-step Sarsa, n-step Off-policy learning, Dyna

Module4:Functionapproximation(8hours)
Value functionapproximation, Stochastic gradient methods, Linear methods, Non-linear functionapproximation, Episodicsemi-gradientcontrol, Semi-gradientn-stepSarsa, The λ return, TD(λ)
Module5:Policyapproximation(8hours)
Policy approximation, Policy gradient theorem, REINFORCE algorithm, Actor-Critic methods, Trust-RegionPolicyOptimization, ProximalPolicyOptimization, Introduction to OpenAI Gym

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADT116	Computational Linguistics	Program Elective1	3	0	0	3

Preamble:

This course introduces the fundamentals of Language processing from a computational viewpoint. This course covers Language models, Computational Phonology and Morphology Unification, Semantics and knowledge representation and Pragmatics. It helps the student to apply NLP tasks such as POST, WSD, and modeling of languages.

Program Outcomes

Graduates of this program will be able to demonstrate the following attributes.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tools to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects.

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Course Outcomes: The COs shown are only indicative. For each course, there can be 4 to 6 COs.

After the completion of the course, the student will be able to

CO 1	Apply Probabilistic Models of Pronunciation and Spelling (Cognitive Knowledge Level: Apply)
CO 2	Apply the different methods for Parsing with Context-Free Grammars for English (Cognitive Knowledge Level: Apply)
CO 3	Apply basic concepts for Probabilistic Context-Free Grammars (Cognitive Knowledge Level: Apply)
CO 4	Describe Unification of Feature Structures (Cognitive Knowledge Level: Understand)
CO 5	Apply the key concepts Word Sense Disambiguation and Information Retrieval (Cognitive Knowledge Level: Apply)
CO 6	Develop an application that uses Natural Language Generation concepts (Cognitive Knowledge Level: Apply)

Test1	Test2	Assignments	Total
15	15	10	40

InternalExaminationPattern:

Each of the two internal examinations has to be conducted out of 50 marks. The first series test shall be preferably conducted after completing the first half of the syllabus and the second series test shall be preferably conducted after completing the remaining part of the syllabus. There will be two parts: Part A and Part B. Part A contains 5 questions (preferably, 2 questions each from the completed modules and 1 question from the partly completed module), having 3 marks for each

question adding up to 15 marks for part A. Students should answer all questions from Part A. Part B contains 7 questions (preferably, 3 questions each from the completed

modules and 1 question from the partly completed module), each with 7 marks. Out of the 7 questions, a student should answer any 5.

End Semester Examination Pattern:

There will be two parts; Part A and Part B. Part A contains 5 questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B contains 7 full questions from each module of which students should answer any 5 full questions. Each question can have a maximum 2 subdivisions and carries 7 marks.

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY		
Q.P. Code:		Name: Reg.No:
FIRST SEMESTER. TECH. DEGREE EXAMINATION		
Branch: Computer Science and Engineering		
25PADT116 Computational Linguistics		
Time: 2.5 hours	Max. Marks: 60	
Answer all 5 questions.		
Q.No.	Part A Answer all 5 questions.	Marks
1.	Compare inflectional and derivational morphology.	5
2.	What are the different types of single-error misspellings give examples for each	5

3.	$S \rightarrow NPVP$ $NP \rightarrow DetN$ $VP \rightarrow VNP$ $N \rightarrow \text{flight} \mid \text{meal}$ $V \rightarrow \text{includes}$ $Det \rightarrow \text{the} \mid \text{a}$ Parse the sentence “ <i>the flight includes a meal</i> ” Using CYK algorithm	5
4.	Discuss the different feature structures associated with grammar. Explain with examples	5
5.	Explain polysemy with example.	5
Q.No.	Part B Answer any 5 questions	Marks
6.	Write Chomsky and Hall notation for the following rules i. Keep the first letter of the name, and drop all occurrences of a, e, i, o, u, w, y. ii. Replace any sequence of identical numbers with a single number (ie., 333 $\rightarrow$ 3)	7
7.	Write a program (python is sufficient) to compute unsmoothed bigrams count	7
8.	Write a short note on Human parsing	7

9.	Draw the DAGs corresponding to the AVMs given in Examples $ \begin{aligned} & \left[\begin{array}{l} \text{AGREEMENT} \left[\begin{array}{l} \text{NUMBER} \quad \text{SG} \end{array} \right] \\ \text{SUBJECT} \left[\begin{array}{l} \text{AGREEMENT} \left[\begin{array}{l} \text{NUMBER} \quad \text{SG} \end{array} \right] \end{array} \right] \end{array} \right] \\ \sqcup \\ & \left[\begin{array}{l} \text{SUBJECT} \left[\begin{array}{l} \text{AGREEMENT} \left[\begin{array}{l} \text{PERSON} \quad 3 \\ \text{NUMBER} \quad \text{SG} \end{array} \right] \end{array} \right] \end{array} \right] \\ = \\ & \left[\begin{array}{l} \text{AGREEMENT} \left[\begin{array}{l} \text{NUMBER} \quad \text{SG} \end{array} \right] \\ \text{SUBJECT} \left[\begin{array}{l} \text{AGREEMENT} \left[\begin{array}{l} \text{NUMBER} \quad \text{SG} \\ \text{PERSON} \quad 3 \end{array} \right] \end{array} \right] \end{array} \right] \end{aligned} $	7
10.	Justify the need of Word Sense Disambiguation? Explain supervised method of WSD in detail	7
11.	Explain the selectional restriction-based disambiguation and its limitations	7
12.	Describe the different feature structures associated with grammar. Explain with examples	7

Syllabus and Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2 credit courses, the content can be for 26 hrs. The audit course in third semester can have content for 30 hours).

25PCSE104	COMPUTATIONAL INTELLIGENCE	CATEGORY	L	T	P	CREDIT
		Program Elective1	3	0	0	3

Preamble: The aim of this course is to provide the students with the knowledge and skills required to design and implement effective and efficient Computational Intelligence solutions to problems for which a direct solution is impractical or unknown. This course covers concepts of fuzzy logic, genetic algorithms, and swarm optimization techniques. The learners will be able to provide Fuzzy and AI –based solutions to real world problems.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Apply fuzzy logic to handle uncertainty and solve engineering problems. (Cognitive Knowledge Level: Apply)
CO2	Apply Fuzzy Logic Inference methods in building intelligent machines. (Cognitive Knowledge Level: Apply)
CO3	Design genetic algorithms for optimized solutions in engineering problems. (Cognitive Knowledge Level: Analyze)
CO4	Analyze the problem scenarios and apply Ant colony system to solve real optimization problems. (Cognitive Knowledge Level: Analyze)
CO5	Apply PSO algorithm to solve real world problems. (Cognitive Knowledge Level: Apply)
CO6	Design, develop and implement solutions based on computational intelligence concepts and techniques. (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	70%-80%
Analyze	30%-40%
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- ii. Course based task/Seminar/Data collection and interpretation : 15 marks
- iii. Test paper (1 number) : 10 marks

Test papers shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Let $V = \{A, B, C, D\}$ be the set of four kinds of vitamins, $F = \{f_1, f_2, f_3\}$ be three kinds of fruits containing the vitamins to various extents, and $D = \{d_1, d_2, d_3\}$ be the set of three diseases that are caused by deficiency of these vitamins. Vitamin contents of the fruits are expressed with the help of the fuzzy relation R over $F \times V$, and the extent of which diseases are caused by the deficiency of these vitamins is given by the fuzzy relation S over $V \times D$. Relations R and S are given below

$$R = \begin{bmatrix} 0.5 & 0.2 & 0.2 & 0.7 & 0.4 & 0.4 & 0.1 & 0.1 & 0.4 & 0.3 & 0.8 & 0.1 \end{bmatrix} S$$

$$= \begin{bmatrix} 0.3 & 0.5 & 0.1 & 0.8 & 0.7 & 0.4 & 0.9 & 0.1 & 0.5 & 0.5 & 0.2 & 0.3 \end{bmatrix}$$

Find the correlation between the amount of certain fruit that should be taken while suffering from a disease.

Course Outcome 2(CO2):

1. In mechanics, the energy of a moving body is called kinetic energy. Suppose we model mass and velocity as inputs to a moving body and energy as output. Observe the system for a while and the following rule is deduced.

IF x is small and y is high

THEN z is medium

The graphical representation of rule is given below. Let the inputs given are 0.35kg and 55m/s. What will the output using Mamdani inference? Any defuzzification method can be used to obtain the crisp single output.

Course Outcome 3(CO3):

1. Describe how Roulette wheel is used for selection. Draw the Roulette wheel for six chromosomes corresponding to the table given below.

<i>Chromosome#</i>	<i>Fitness</i>
1	10
2	5
3	25
4	15
5	30
6	20

Course Outcome 4 (CO4):

1. Consider an Ant Colony System based on Ant Quantity model for solving the following Travelling Salesman Problem. Compute the pheromone content at each of the edges after 4 steps (1 iteration). Assume pheromone decay factor $\rho=0.1$, $Q = 120$. Assume initial pheromone of 50 units at each of the edges and that three ants k_1 , k_2 and k_3 follow the paths given below in the first iteration.

$k_1=abcda; k_2=acbda; k_3=adcba$

2. Six jobs go first on machine A, then on machine B, and finally on machine C. The order of the completion of the jobs in the three machines is given in Table

Jobs	Processing time (hr)		
	Machine A	Machine B	Machine C
1	8	3	8
2	3	4	7
	7	5	6
4	2	2	9
5	5	1	10
6	1	6	9

Find the sequence of jobs that minimizes the time required to complete the jobs using the ACS model.

CourseOutcome5(CO5):

1. Consider a particle swarm optimization system composed of three particles and maximum velocity 10. Assume that both the random numbers r_1 and r_2 used for computing the movement of the particle towards the individual best position and social best position are 0.5. Also assume that the space of solutions is the two-dimensional real valued space and the current state of swarm is as follows:

Position of particles: $x_1 = (4,4)$; $x_2 = (8,3)$; $x_3 = (6,7)$

Individual best positions: $x_{14,4} = *$; $x_2^* = (7,3)$; $x_3^* = (5,6)$

Velocities: $v_1 = (2,2)$; $v_2 = (3,3)$; $v_3 = (4,4)$

What would be the next position of each particle after one iteration of the PSO algorithm if the inertia parameter ω that is used along with current velocity update formula is 0.8 ?

CourseOutcome6(CO6):

1. Implement travelling salesman problem using appropriate optimization technique.

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ **PAGES:5**

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PCSE104

Course Name: Computational Intelligence

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Consider the set of Colours $A = \{\text{Blue, Red, Orange, Yellow, Green}\}$, Attributes $B = \{\text{Bright, Warmth, Dullness}\}$, Feelings $C = \{\text{Unpleasant, happiness, Angry}\}$.
Given R and S where R is the relationship between colours and their attributes and S is the relationship between colour attributes and feelings created. Find the relationship Q between colours and feelings created. (5)

2. Develop a membership function for — Tall. Based on that devise a membership function for — Very Tall. Explain how it is done (5)
3. Mention the importance of objective (fitness) function in genetic algorithm (5)
4. Describe how pheromone is updated. What is elitist/elasticants? Are they useful in this scenario? (5)
5. What is the significance of pbest and gbest particles in solving problems with particle swarm optimization? (5)

Part B

(Answer any five questions. Each question carries 7 marks)

6. (a) Consider the set of fruits $F = \{ \text{Apple, Orange, Lemon, Strawberry, Pineapple} \}$. (3)

Let sweet fruits $B = \{ \quad + \quad \}$ and

Sour fruits $F = \{ \quad + \quad \}$

Find fruits that are Sweet or Sour, Sweet but not Sour, Sweet and Sour

- (b) Consider two fuzzy sets given by (4)

Find the fuzzy relation for the Cartesian product of P and Q, i.e., $R = P \times Q$.

Introduce a fuzzy set T given by

$$T = \left\{ \frac{0.9}{\text{short}} + \frac{0.3}{\text{medium}} + \frac{0.6}{\text{tall}} \right\}$$

and Find $T \circ R$ using max-min composition

7. Consider a Fuzzy Inference System for checking climate comfortability of human beings for long time living. The system accepts two inputs – (7)

temperature and humidity. The rules and membership functions of FIS is given below. Using Mamdani inference and center of sum, calculate output when the temperature is 50 Fahrenheit and humidity is 50%.

Rule 1: IF temperature is cool and humidity is low, THEN climate is comfortable.

Rule 2: IF temperature is cool and humidity is high, THEN climate is livable

The fuzzy sets—Easy Question Paper and their corresponding—Student Performance are given below

$$\text{Easy\_QP} = \left\{ \frac{0.8}{1} + \frac{0.2}{2} + \frac{0.6}{3} + \frac{0.7}{4} \right\}$$

$$\text{Stud\_Perf} = \left\{ \frac{0.3}{a} + \frac{0.4}{b} + \frac{0.8}{c} + \frac{0.9}{d} + \frac{0.8}{1} + \frac{0.2}{2} + \frac{0.6}{3} + \frac{0.8}{4} + \frac{0.7}{5} \right\}$$

Find the performance of students and find for the question paper—Somewhat Easy

$$\text{Somewhat\_Easy} = \left\{ \right\}$$

8. Explain any procedure to map a solution to the corresponding chromosome and vice versa in genetic algorithms. Also illustrate it with an example (7)
9. Describe two methods used to select individuals from a population for the mating pool in Genetic Algorithms (7)
- 10 (a) Consider the TSP with the following edge costs. Given the evaporation factor $\rho=0.02$ and initial pheromone at all edges $T_{ij}=100$ (1)

What is the cost of best tour?

- (b) Using the equation $T_{ij}(t+1) = (1-\rho)T_{ij}(t) + \Delta T_{ij}(t, t+1)$, compute the T_{ij} of the edge $\langle a, c \rangle$ when 10 ants use the edges $\langle a, c \rangle$, using the following models: (6)
 - i. Ant Density Model (Constant $Q=10$)
 - ii. Ant Quantity Model (Constant $Q=100$)
 where Q is the constant related to the pheromone updation.

- 11 Describe Ant Colony System. What are the different types of Ant systems? (7)

- 12 Consider a particle swarm optimization system composed of three particles and maximum velocity 10. Assume that both the random numbers r_1 and r_2 used for computing the movement of the particle towards the individual best position and social best position are 0.5. Also assume that the space of solutions is the two-dimensional real valued space and the current state of swarm is as follows: (7)

Position of particles: $x_1 = (4,4)$; $x_2 = (8,3)$; $x_3 = (6,7)$

Individual best positions: $x_1^* = (4,4)$; $x_2^* = (7,3)$; $x_3^* = (5,6)$

Velocities: $v_1 = (2,2)$; $v_2 = (3,3)$; $v_3 = (4,4)$

What would be the next position of each particle after one iteration of the PSO algorithm if the inertia parameter ω that is used along with current velocity update formula is 0.8?

Syllabus

Module1:Fuzzy Logic

Crisp sets vs fuzzy sets- Operations and properties of Fuzzy sets. Membership functions - Linguistic variables. Operations on fuzzy sets- Fuzzy laws- Operations on fuzzy relations, Fuzzy composition- Max- min, Max – product. Alpha-cut representation.

Module2:Fuzzy Systems

Fuzzy Reasoning – GMP and GMT. Fuzzy Inference System: Defuzzification methods - Fuzzy Controllers -Mamdani FIS, Larsen Model

Module3:Genetic Algorithms

Introduction to Genetic Algorithms – Theoretical foundation - GA encoding, decoding - GA operations – Elitism – GA parameters – Convergence. Multi-objective Genetic Algorithm – Pareto Ranking.

Module4:Ant Colony Systems

Swarm intelligent systems - Background Ant colony systems – Biological systems-
Development of the ant colony system- - Working - Pheromone updating- Types of ant systems-
ACO algorithms for TSP

Module5:ParticleSwarmOptimization

Basic Model - Global Best PSO- Local Best PSO- Comparison of p_{best} to l_{best} - PSO
Algorithm Parameters- Problem Formulation of PSO algorithm- Working. Rate of convergence
improvements -Velocity clamping- Inertia weight- Constriction Coefficient- Boundary
Conditions- Guaranteed Convergence PSO- Initialization, Stopping Criteria, Iteration Terms
and Function Evaluation.

CODE	ADVANCED DATABASE	CATEGORY	L	T	P	CREDIT
25PADT121		PROGRAM ELECTIVE2	3	0	0	3

Preamble:

This course provides an exposure to the concepts and techniques in advanced database management. The topics covered in this course includes Relational Model –Conceptual Model and Schema Design, Strategies regarding query processing and optimization, Distributed system architecture, Semi-structured data handling and modern data management techniques. This course helps the learner to develop applications that manage data efficiently with the help of suitable data models and techniques.

Course Outcomes: After the completion of the course the student will be able to

CO1	Make use of the concepts in relational database systems including: data models relational algebra, ER features, and the different normalization techniques to relational models. (Cognitive Knowledge Level: Apply)
CO2	Illustrate the basic database storage, file organization, database accessing and indexing (Cognitive Knowledge Level: Apply)
CO3	Identify various measures of query processing and optimization. (Cognitive Knowledge Level: Apply)
CO4	Analyze implementation aspects of distributed system on database architecture. (Cognitive Knowledge Level: Analyze)
CO5	Make use of semi structured data, XML and XML queries for data management. (Cognitive Knowledge Level: Apply)
CO6	Design, Develop, and Implement innovative ideas on advanced database concepts and techniques. (Cognitive Knowledge Level: Create)

Program Outcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Analyze	30%-40%
Evaluate	
Create	

Markdistribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

ContinuousInternalEvaluationPattern:

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) 15 marks**
- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation :15marks**
- iii. Testpaper(1number) :10marks**

Testpapershallincludeminimum80%ofthesyllabus.

Coursebasedtask/testpaperquestionsshallbeusefulinthetestingofknowledge,skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

Theendsemester examinationwillbeconductedbytherespectiveCollege.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the studentsinacourse,throughlonganswerquestionsrelatingtotheoretical/practical

knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

- i. How does a query tree represent a relational algebra expression? Draw the initial query tree, apply heuristic rules and obtain an optimized query expression for the following SQL query.

SELECT S.SName, C.CName, G.grade

FROM Student S, Courses C, Faculty F, Grades G

WHERE S.Sid = G.Sid AND C.Cid = G.Cid AND F.Fid = G.Fid AND G.grade $\geq$ 7.0

AND F.DName = 'CSE'

- ii. Consider the ER diagram shown below. Identify the minimum set of relations required to map to a relational model. Identify foreign keys and primary keys. Draw a schema diagram showing all relations

CourseOutcome2(CO2):

1. Differentiate between fixed length records and variable length records.
2. A file has $r=36000$ STUDENT records of fixed length. Each record has the following fields: Name (25 bytes), SSN (8 bytes), Address (35 bytes), Phone (10 bytes), Date of Birth (8 bytes), Sex (1 bytes), Class code (3 bytes).
 - i. Calculate the record size of R
 - ii. Calculate the blocking factor bfr and number of file blocks b, assuming an unspanned organization
 - iii. Calculate the average time it takes to find a record doing a linear search on the file (assume blocks are stored continuously)
 - iv. Assume the file ordered by SSN, by doing binary search, calculate time it takes.
 - v. Assume a primary index is created with key as SSN and the data pointer needs 8 bytes, find the number blocks required to keep the primary index. Also find the average time required to find a record using the index.

CourseOutcome3(CO3):

- i. Let s be selection cardinality and bfr be the blocking factor. Compare the cost function for SELECT operation in the following cases i) when a clustering index is available ii) When a secondary index is available.
- ii. Consider a STUDENT file with 20,000 records stored in a disk with fixed length blocks of size 1024 bytes. Each record is of 40 bytes. Assume that in the STUDENT file, there exists a secondary index on key field, Sid, with $X_{SID}=3$. There is another file, COURSE_REG, with attributes StudID, CourseID, CourseName and Date of Registration. There are 40,000 records in COURSE_REG file, stored as 4000 blocks. A secondary index on non key field StudID with $X_{STUDID}=4$ is available. Let the join selectivity be $1/8$ and 6 output records be stored in a block. Find the number of block accesses required for nested join and single loop join for the following query:

STUDENT SID=STUDID COURSE_REG

CourseOutcome4(CO4):

1. There are four sites S1, S2, S3 and S4 in a distributed database system with weights 2, 3, 4 and 3 respectively. Assume read quorum value is 6. If a data item x is replicated across these sites and quorum consensus protocol is followed:
 - i. find the minimum possible value of write quorum.
 - ii. Minimum number of sites locked to perform a read operation

- iii. Minimum number of sites locked to perform a write operation
2. Explain 2-phase commit protocol in a distributed environment. What actions would be taken when a site recovers from failure?

Course Outcome 5 (CO5)

1. It is required to represent a University database in XML form. A University has one or more departments. Each department has a name, a specialization, Head of the Department. Several faculty members are working on each department and several courses are run by a department. Each department is uniquely identified by a number (attribute). Name, Area of Specialization each faculty needs to be stored.

Information such as CourseId, CourseName, Duration and Credits are to be kept about each course. Design a DTD for this University structure

Model Question Paper

QPCODE:

Name: _____ **PAGES: 4**

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT121

Course Name: ADVANCED DATABASE

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Given a relation schema $R(ABCD)$ and set of dependencies $G = \{A \rightarrow B, BC \rightarrow D, A \rightarrow C\}$ (5)
 1. Identify the key.
 2. Identify the normal form.
 3. Decompose into BCNF.

2. A file has $r=36000$ STUDENT records of fixed length. Each record has the following fields: Name (25 bytes), SSN (8 bytes), Address (35 bytes), Phone (10 bytes), Date of Birth (8 bytes), Sex (1 bytes), Class code (3 bytes). (5)
- Calculate the record size of R
 - Calculate the blocking factor b and number of file blocks b , assuming an unspanned organization
 - Calculate the average time it takes to find a record doing a linear search on the file (assume blocks are stored continuously)
 - Assume a primary index is created with key as SSN and the data pointer needs 8 bytes, find the number blocks required to keep the primary index. Also find the average time required to find a record using the index.
3. Discuss the rules for transformation of query trees and identify when each rule should be applied during optimization (5)
4. Explain 2-phase commit protocol in a distributed environment. (5)
5. Design an XML document for storing hostel mess food details (meal taken such as breakfast, lunch, dinner) with their charges for the month of June 2022. Charges may vary depending on the food taken. Students can opt not to take any meals on certain days. (5)
- Write a sample XML for 2 students for 2 days.
 - Write an XQuery to return the lunch details of all.
 - Create an XSD for the same.

Part B

(Answer any five questions. Each question carries 7 marks)

6. (a) Suppose you are given with a relation schema $R(ABCD)$. Each of the following FDs, assuming they are the dependencies hold over R, state whether or not proposed decomposition of R into smaller relation is a good decomposition. Explain Why? (5)
- $AB \rightarrow BC \rightarrow A, C \rightarrow D$, decompose into ACD and BC
 - $A \rightarrow BC, C \rightarrow AD, A \rightarrow C$, decompose into BCD and AC
- (b) What Minimal Cover. Illustrate with an example (2)

7. Notown Records has decided to store information about musicians who perform on its albums (as well as other company data) in a database. The company has wisely chosen to hire you as a database designer (at your usual consulting fee of \$2500/day). Design a conceptual schema for Notown and draw an ER diagram for your schema. (7)
- a) Each musician that records at Notown has an SSN, a name, an address, and a phone number.
 - b) Each instrument used in songs recorded at Notown has a unique identification number, a name, and a musical key.
 - c) Each album recorded on the Notown label has a unique identification number, a title, a copyright date, a format, and an album identifier. Each song recorded at Notown has a title and an author.
 - d) Each musician may play several instruments, and a given instrument may be played by several musicians.
 - e) Each album has a number of songs on it, but no song may appear on more than one album.
 - f) Each song is performed by one or more musicians, and a musician may perform a number of songs.
 - g) Each album has exactly one musician who acts as its producer. A musician may produce several albums, of course.

8. Consider the following statistics about a relational table, STUDENT(Sid, SName, Branch, CNo). There are 16000 records in 4000 blocks with a blocking factor of 4. There is a secondary index on non-key attribute CNo with $X_{CNO} = 3$. Assume, there are only 100 different courses. We have another relation, COURSES (CId, CName, Credit, Type). There are 100 rows in this table, stored in 20 disk blocks. There exists a primary index on CId with $X_{CID} = 1$. Assume the selection cardinality for the join attribute is 160. (7)

Estimate the cost of join operation ($STUDENT_{CNO=CId} COURSES$) by the following type of join operation (avoid the cost incurred for the storage of resultant records) .

- i) nested loop join
- ii) single loop join.
- iii) nested loop join with a buffer space availability of 12 blocks

9. Consider the bitmap representation of the free-space map, where for each block in the file, two bits are maintained in the bitmap. If the block is between 0 and 30 percent full the bits are 00, between 30 and 60 percent the bits are 01, between 60 and 90 percent the bits are 10, and above 90 percent the bits are 11. Such bitmaps can be kept in memory even for quite large files. (7)
- i Outline two benefits and one drawback to using two bits for a block, instead of one byte as described earlier in this chapter.
 - ii Describe how to keep the bitmap up to date on record insertions and deletions.
 - iii Outline the benefit of the bitmap technique over free lists in searching for free space and in updating free space information.

10(a) Let $r(A, B, C)$ with tuples $\{(1, 2, 3), (4, 5, 6), (1, 2, 4), (5, 3, 2), (8, 9, 7)\}$ and $s(C, D, E)$ with tuples $\{(3, 4, 5), (3, 6, 8), (2, 3, 2), (1, 4, 1), (1, 2, 3)\}$ are two relation instances. Compute $r \text{ semijoin } s$ (4)

(b) What actions would be taken when a site recovers from failure? (3)

- 11 (a) Assume that a Movie database in XML form is available and title, director, year of release, cost of production are the information stored in it. Let MOVIE, TITLE, DIRECTOR, YEAR, COST are the XML elements, and the element MOVIE has an attribute CATEGORY which indicates the type of movies (*Horror, Comedy, Thriller*). Similarly, the TITLE has an attribute LAN which indicates the language (*Malayalam, English, Hindi*). A movie can have more than one director. (4)

Write XPATH queries for the following

- i. List all English Movies
- ii. List all movies where language is not specified
- iii. List all movies having two directors
- iv. List all *Comedy* type movies in the database
- v. List all movies whose cost of production is below 10 million.

(b) Explain the terms: i) *Well Formed XML* ii) *Valid XML* (3)

Write an XML schema for the above, and also provide an XQuery expression to get the books published in the year 1992.

Syllabus and Course Plan

25PCSE117-ADVANCED DATABASE

Module 1 (Relational Databases – Relational Model, Normalization) 11 Hours

Relational Model Introduction - Structure of Relational Database, database Schema, Keys

The Relational Algebra: Fundamental Operations, The Entity-Relationship model: Entity Set, Relationship Set, Attributes, Constraints: : Mapping cardinalities-E-R Diagrams, Real world Scenarios – ER diagrams. Normalization - The Need for Normalization, Process, Rules for Functional Dependencies, First Normal Form, Second Normal Form, Third Normal Forms, Boyce/Codd Normal Form, Functional Dependencies- Minimal cover, Equivalence, Properties of Relational Decomposition
Relational Databases

Module 2: Query Processing and Optimization (8 Hours)

Placing file records on disk- Record types, Record blocking and spanned versus Unspanned records, Hashing techniques – Internal, External hashing for disk files, Indexing and Hashing: Basic concept Ordered Indices, B+ tree Index Files: Structure of a B+-Tree (structure only, algorithms not needed), Indexes on Multiple keys, Hash Indexes, Bitmap indices, Indexing spatial data

Module 3: Introduction to Query Processing and Optimization (6 hours)

Measures of query cost, Algorithms for Selection with cost analysis, Algorithms for Join with cost analysis, Evaluation of expressions, Heuristics in Query Optimization, Optimization of Relational Algebra expressions.

Module4:DistributedSystemArchitecture(6Hours)

Introduction to Distributed System architecture, Distributed storage & Distributed file systems

Distributed RDB design & its Transparency, Distributed Transactions, Commit Protocols & Concurrency Control, Distributed Query Processing,

Module5:XML,XPath,Non-relationalDatabases---9Hours

Introduction to Semi-structured Data and XML Databases, XML Data Model – XSD, XML: DTD and XML Schema, XML presentation, XPath Queries, XQuery, Next Generation Databases: Distributed Relational Databases - MongoDB Sharding and Replication, Object Relational Systems

25PADT122	CONCEPTS IN CLOUD COMPUTING	CATEGORY	L	T	P	CREDIT
		Program				
		Elective2	3	0	0	3

Preamble: Cloud computing is the delivery of computing services over the Internet. The syllabus is prepared with a view to equip the students to learn basic concepts in cloud computing - compute, storage, networking. They should gain basic understanding of orchestration, HA and failover. After learning this course computation services can offer faster innovation, flexible resources, and economies of scale.

Course Outcomes: After the completion of the course the student will be able to

CO 1	Make use of the concepts in cloud computing and OpenStack logical architecture to develop applications (Apply)
CO 2	Explore OpenStack cloud controller and common services (Apply)
CO 3	Compare different OpenStack compute service components and storage types (Apply)
CO 4	Analyse the OpenStack Networking-Connection types and networking services (Analyse)
CO 5	Analyse the orchestration, HA and failover in OpenStack (Analyse)
CO 6	Design, develop, implement and present innovative ideas on cloud computing (Analyse)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5:An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	50-80
Analyse	20-40
Evaluate	Can be done through Assignments/projects
Create	Can be done through Assignments/projects

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) :15marks
- ii. Course based task/Seminar/Data collection and interpretation :15marks
- iii. Test paper (1 number) :10marks

Test papers shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ PAGES:4

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER, TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT122

Course Name: CONCEPTS IN CLOUD COMPUTING

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Differentiate between private cloud and public cloud? Illustrate the design of OpenStack logical architecture (5)
2. Illustrate asymmetric clustering and symmetric clustering. Categorize the functionalities handled by the cloud controller (5)
3. Design the systems of Docker containers. (5)
4. Derive the procedure for connecting two networks using a virtual router. (5)
5. How high-performance, open-source load balancer and reverse proxy for TCP and HTTP applications are obtained. List the HA levels in OpenStack. (5)

Part B

(Answer any five questions. Each question carries 7 marks)

6. (a) How the provisioning of VM in OpenStack is organised. Design the system and draw a diagrammatic representation (4)
- (b) Identify the best practices used in Physical mode design (3)
7. Design a method with steps for running OpenStack playbooks (7)
8. Explain the deploying Swift services. (7)
9. Design the architecture of Neutron and explain. (7)
10. Identify the steps involved in setting a database with high availability (4)

11	Compare object storage with NAS/SAN based storage	(7)
12	Identify the categorization of neutron virtual networks and justify the categories.	(7)

Syllabus-CONCEPTS IN CLOUD COMPUTING

Module 1: Overview of OpenStack (6 Hours)

Introduction to cloud computing, private cloud, public cloud, hybrid cloud architecture. Cloud Services - Infrastructure as a Service, Platform as a Service, Storage as a Service. Designing OpenStack Cloud Architectural Consideration - OpenStack - The new data center paradigm - OpenStack logical architecture. Nova - Compute service . Neutron - Networking services . Gathering the pieces and building a picture. A sample architecture setup.

Module 2: OpenStack cluster - Controller and common services (5

Hours) OpenStack Cluster – The Cloud Controller and Common Services, Asymmetric clustering, Symmetric clustering. The cloud controller - The keystone service. The nova-conductor service, The nova-scheduler service, The API services, Image management. The network service, The horizon dashboard, The telemetry services.

Module 3: OpenStack compute and Storage (11

Hours) The compute service components - Deciding on the hypervisor OpenStack Magnum project. Segregating the compute cloud Overcommitment considerations. Storing instances' alternatives. Understanding instance booting. Planning for service recovery. OpenStack Storage - Block, Object, and File Share - Understanding the storage types. A spotlight on swift. Deploying swift service. Using Block Storage Service Cinder.

Module 4: OpenStack Networking (9 Hours)

The architecture of Neutron. Implementing virtual networks - VLAN, Tunnel based. Virtual Switches, The ML2 Plugin. Neutron Subnets Connecting virtual networks with routers - Configuring the routing service Connecting networks using a virtual router, Connecting to the external world Connectivity from the external world, Associating a floating IP Implementing network security in OpenStack.

Module 5: OpenStack Orchestration, HA and Failover

(9

Hours) Orchestration in OpenStack, Heat and its Components. Stacking in OpenStack. OpenStackOrchestrationwithTerraform.ScopeofHAINOpenStack.HAINthedatabase.HAINthe Queue, Implementing HA on RabbitMQ

CODE 25PADT123	STATISTICS FOR DATA SCIENTISTS	CATEGORY	L	T	P	CREDIT
		PEC-2	3	0	0	3

Preamble: This course is intended to systematically master the core concepts in statistics & probability, descriptive statistics, hypothesis testing, regression analysis, analysis of variance, and some advanced regression/machine learning methods such as logistics regressions, polynomial regressions and decision trees. This course helps the students to work with different types of data and implement the techniques and make data-driven decisions

Course Outcomes:

After the completion of the course, the student will be able to

CO 1	Apply the fundamentals of statistics, from bar plots to ANOVAs, regression to k-means, and t-test to non-parametric permutation testing for machine learning, AI, and data science. (Cognitive knowledge level: Apply)
CO 2	Visualize the data in different descriptive, inferential, and predictive concepts for relevant stages of data analytics. (Cognitive knowledge level: Apply)
CO 3	Analyze the data by making use of concepts such as mean, median, and mode, plus range and IQR and box-and-whisker plots (Cognitive knowledge level: Apply)
CO 4	Apply the right statistical technique at appropriate stage of a data analytics project
CO 5	Implement statistical concepts in Python/MATLAB (Cognitive knowledge level: Apply)
CO 6	Draw inferences from the data for different machine learning models through hypothesis testing. (Cognitive knowledge level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real-world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources, and state-of-the-art tools to model, analyse and solve practical engineering problems.

PO6: An ability to engage in lifelong learning for the design and development related to the stream-related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions

Course Outcome 1 (CO1):

1. Identify the variables in the following data description and classify the variables as categorical or quantitative. If the variable is quantitative, list the units.

—The Indianapolis 500 is a car race that's been taking place since 1911 and is often scheduled to take place over Memorial Day weekend. The race takes place at the Indianapolis Motor Speedway and a driver needs to complete 200 laps that cover a distance of 500 miles. Race results are reported by driver number, the driver's name, the type of car the driver uses, and the time to the nearest ten-thousandth of a second. If a driver doesn't finish the race, their number of laps completed is recorded instead of the time to complete the race.

2. Compare the scatterplots. The second graph includes extra data starting in 1880. How does this compare to the plot that only shows 1910 to 2010? Explain trends in the data, and how the regression line changes by adding in these extra points. Which trend line would be best for predicting the temperature in 2050?

3. Calculate and interpret the correlation coefficient for the dataset

Course Outcome 2 (CO2)

1. Explain Descriptive analytics, Diagnostic analytics, Predictive Analytics, and Prescriptive analytics
2. Sarah's monthly sales to date are shown in the ogive. Signify the meaning of circled point

3. Bethany started a sit-up program so that she can do 200 sit-ups in a day. At the end of week 6 she'll have completed 1,685 sit-ups. Create an ogive of the data.

Week	Number of sit-ups
Week 1	350
Week 2	455
Week 3	600
Week 4	540
Week 5	1,275
Week 6	1,685

Course Outcome 3 (CO3):

- Elaborate Normal distributions and z-scores
 - Let's say the mean finishing time for male speed skaters in the winter Olympics on the 500-meter track is 70.42 seconds, with a standard deviation of 0.34 seconds (the data is normally distributed). What is the maximum time a skater can post if he wants to skate faster than 95% of his competitors?
- Illustrate the advantages of the bar chart over the pie chart
 - List the charts for categorical variables and quantitative variables and illustrate
- Create the total-relative frequency table for the data, and then answer the question: Carl is in charge of creating an activity for the students in his college dorm. If Carl wants the highest possible turnout, which activity should he choose? Why?

	Movie	Bowling	Pizza Party
Male	20	40	55
Female	35	50	62

Course Outcome 4 (CO4):

- Explain the techniques you will use for your data analysis before you collect any data
- The first stage in any analysis should be to describe your data and the population from which it is drawn. The statistics appropriate for this activity fall into three broad groups and depend on the type of data you have.

Answer the following

- a. What do you want to have to look at the distribution, to describe the central tendency, and describe the spread
 - b. With what type of data
 - c. Appropriate techniques
3. Explain the appropriate Statistical techniques to find the Differences between groups and variables and relationship between the variables

Course Outcome 5(CO5):

1. Explain the Central Limit Theorem and Implement it in Python/ MATLAB
2. Explain KNN and PCA and Implement them in Python/ MATLAB

Course Outcome 6(CO5):

1. Explain the significance of hypothesis testing for machine learning and the parameters of hypothesis testing
2. A fast-food restaurant is implementing new workplace policies with the goal of increasing employee satisfaction by 2 points on a scale of 1 to 10. The restaurant surveys 10 employees, asking them both before and after the policies are enacted to rate their workplace satisfaction on the 1 – 10 scale and records the results in the table below.

Can the restaurant say at 5% significance that the policies increased employee satisfaction by 2 points?

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ PAGES:4

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT123

Course Name: STATISTICS FOR DATA SCIENTISTS

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. A company is analyzing the results from a recent survey about why people left their employment. The results are shown in the data table below. In general, is a bar graph or a pie chart a better choice to display the data? Why? 5

Reasons for leaving a job	
Reduced job duties	30%
Company restructuring	15%
Too much travel time	12%
Looking for more opportunity	11%
Need more personal time	9%
Poor expected company growth	8%
The job was a contractor short term	8%
Need more of a challenge	5%
Other	2%

2. John stops at the local gas station and decides to buy lottery tickets. Each ticket has a 20% chance of being a winner. He will buy a lottery ticket and check to see if it's a winner. He'll collect this money and be done if it's a winner. If it's not a winner, he'll buy another. He'll repeat this until he gets a winning ticket. But if he has won by his fifth ticket, he won't buy any more tickets. Let L be the number of lottery tickets John will buy, then find $E(L)$. 5

3. Estimate the effect of bias on sampling. 5

4. Compare correlation and regression 5

5. Explain Signal detection theory (5x5=25)

Part B

(Answer any five questions. Each question carries 7 marks)

6. (a) Appraise the happening to our measures of central tendency and spread when we make changes to our data set (mean, median, mode, range, and IQR) (3)
- i. Changing the entire data set
 - ii. Adding or removing a data point from the set
- (b) Illustrate the appropriate visualization technique to represent a data set when we want to show the median and spread of the data at the same time (2)
- (c) Describe the importance of Box-and-whisker plots (2)
7. (a) Illustrate measures of central tendency (3.5)
- (b) Illustrate the measures of spread (Range, interquartile range (IQR), variance, standard deviation) (3.5)
8. (a) Two factories A and B produce heaters for car seats. A customer received a defective car seat heater and the manager at factory B would like to know if it came from her factory. Use the table below to determine the probability that the heater came from factory B. (2.5)
- (b) Explain Poisson process (2)
- (c) There are 30 students in a Kindergarten class and each one of them has a 4% chance of forgetting their lunch on any given day. What is the probability that exactly 5 of them will forget their lunch today? (2.5)
9. (a) You are planning a day at the beach, but the morning is cloudy. 64% of all rainy days start off cloudy, but cloudy mornings are common (55% of days start cloudy). This month is usually a dry month and only 18% of the days tend to be rainy. What's the chance that it will rain during your day at the beach? (3)
- (b) The time it takes students to complete multiple choice questions on an AP Statistics Exam has a mean of 55 seconds with a standard deviation of 12 seconds. If the exam consists of 40 multiple choice questions, find the mean total time to finish the exam. Then find the standard deviation in the total time. What assumption must be made? (2)
- (c) We toss a fair coin 15 times and record the number of tails. Is this

ment modeled by a binomial random variable? If it is 't, explain why. If it is, determine its parameters n and p and express the binomial random variable as $X \sim B(n, p)$.

(2)

- 10 (a) Suppose we want to determine whether the mean height of men is significantly higher than the mean height of women in a certain city, so we randomly sample 100 men and 100 women. Given the mean and standard deviation of both samples below, use the critical value approach to say whether men are significantly taller than women at a 1% level of significance. (7)

- 11 (a) Three types of batteries were tested for battery life. See the battery lives in the table below. In constructing the ANOVA table, what will be the values of factor and error degrees of freedom? (3)
(3.5)

C1	C2	C3
Battery 1	Battery 2	Battery 3
90	102	102
85	98	82
92	97	85
95	103	75
88	107	92

- (b) Explain confidence interval and its importance (5)
- 12 (a) Explain the statistical power and its importance (2)
- (b) Use the Average Global Sea Surface Temperatures data shown in the table to create a line of best fit for the data. Consider 1910 as year 10. Use the equation to predict the average global sea surface temperature in the year 2050. (5)

Year	Temperature, F
1910	-1.11277
1920	-0.71965
1930	-0.58358
1940	-0.17977
1950	-0.55318
1960	-0.30358
1970	-0.30863

Syllabus

Mod	Contents	hrs
I	DESCRIPTIVE STATISTICS: DATA, Types of data, data, Samples vs. population data, Samples (N=1 & N>1 studies), Visualizing Data: Bar plots. Box-and-whisker plots, Boxplots of normal and uniform noise, Histograms, Histogram proportion, Pie charts, Implementation, descriptive vs. inferential statistics, Accuracy, precision, and resolution. Data distributions, histograms of distributions, Measures of central tendency, central tendencies with outliers, Measures of dispersion Interquartile range, QQ plots, Statistical "moments", Histograms: Violin plots, Shannon entropy, entropy, and number of bins, Implementation in Python	7
II	DATA NORMALISATION AND PROBABILITY: Z-score standardization, Min-max scaling, Removing outliers: z-score method, modified z-score method, z vs. modified-z, Multivariate outlier detection, Euclidean distance for outlier removal, Removing outliers by data trimming, Non-parametric solutions to outliers, Implementation Probability: Computing probabilities, Probability mass vs. density, PDF, CDF, creating sample estimate distributions, Monte Carlo sampling, Sampling variability, noise, and other annoyances, Expected value, Conditional probability, and Tree diagrams, The Law of Large Numbers, The Central Limit Theorem,, Implementation Random Variables: Discrete RV, Binomial Poisson, Bernoulli, and Geometric random variables	8
III	SAMPLING & HYPOTHESIS TESTING: Sampling: Types of studies, Sampling, and bias, Sampling distribution of the sample mean, Conditions for inference with the SDSM, Sampling distribution of the sample proportion, Conditions for inference with the SDSP, Hypothesis Testing: Independent and Dependent Variables, models, residuals, Sample distributions under null and alternative hypotheses, P-values: definition, tails, and misinterpretations, P-z combinations that you should memorize, Degrees of freedom, Type 1 and Type 2 errors, Parametric vs. non-parametric tests, Multiple comparisons and Bonferroni correction, Statistical vs. theoretical vs. clinical significance, Cross-validation, Statistical significance vs. classification accuracy, The T-Test Family: Purpose and interpretation, One-sample t- test, The role of variance, Two-samples t-test, Importance of N for t-test, Wilcoxon signed-rank (nonparametric t-test), Mann-Whitney U test (nonparametric t-test), U test, Permutation testing for t-test, significance, Python Implementation	8
IV	CONFIDENCE INTERVALS & ANOVA: Confidence Intervals on Parameters: Computing confidence intervals via formula, Confidence intervals via bootstrapping (resampling), Misconceptions about confidence intervals. CORRELATION: Motivation and description of correlation, Covariance, and correlation: formulas, Correlation matrix, correlation to the covariance matrix, Partial correlation, The problem with Pearson, Nonparametric correlation: Spearman rank, Fisher-Z transformation for correlations, Spearman correlation, the confidence interval on the correlation, Kendall's correlation for ordinal data, The subgroups correlation paradox, Cosine similarity, Analysis Of Variance: Sum of squares, The F-test and the ANOVA table, The omnibus F-test and posthoc comparisons, The two-way ANOVA, One-way ANOVA example, Two-way ANOVA example, Regression: Introduction to GLM/regression, Least-squares solution	8

	to the GLM, Evaluating regression models: R ² and F, Simple regression, implementation	
V	REGRESSION, CLUSTERING, AND PCA: Regression: Multiple regression, Standardizing regression coefficients, Polynomial regression models, Logistic regression, Under and over-fitting, comparing "nested" models, missing data, Statistical Power, And Sample Tests: Importance of statistical power, Estimating statistical power and sample size, Compute power and sample size using G*Power, Clustering And Dimension-Reduction -K-means clustering, K-means, and normalization, K-means on a Gauss blur, Clustering via dbSCAN, dbSCAN vs. k-means, K-nearest neighbor classification, Principal components analysis, K-means on PC data, independent components analysis, Signal Detection Theory: The two perspectives of the world, d-prime, Response bias, F-score, Receiver operating characteristics (ROC), Python Implementation	9

S.NO	TOPIC	NO. OF LECTURES (40hrs)
Module 1-Descriptive Statistics-7 Hours		
1.1	Types of data, Samples vs. population data, Samples,	1
1.2	Visualizing Data: Bar plots, Box-and-whisker plots, Box plots of normal and uniform noise, Histograms,	1
1.3	Histogram proportion, Pie charts, implementation	1
1.4	Descriptive vs. inferential statistics, Accuracy, precision, and resolution. Data distributions, histograms of distributions,	1
1.5	Measures of central tendency, central tendencies with outliers	1
1.6	Measures of dispersion Interquartile range, QQ plots, Statistical "moments	1
1.7	Histograms: Violin plots, Shannon entropy, entropy, and number of bins, code	1
Module 2-Data Normalisation and Probability-8 Hrs		
2.1	DATA NORMALISATION AND PROBABILITY: Z-score standardization, min-max scaling, removing outliers: z-score method, The modified z-score method, z vs. modified-z,	1
2.2	Multivariate outlier detection, Euclidean distance for outlier removal, Removing outliers by data trimming, non-parametric solutions to outliers,	1
2.3	Probability: Computing probabilities,	1
2.4	Probability mass vs. density, PDF, CDF. CDFs for various distributions,	1
2.5	Creating sample estimate distributions, Monte Carlo sampling, Sampling variability, noise, and other annoyances, Expected value, Conditional probability, and Tree diagrams,	1
2.6	The Law of Large Numbers, The Central Limit Theorem, Implementation	1
2.7	Random Variables: Binomial and Poisson RV,	1

2.8	Bernoulli, and Geometric random variables	1
	Module 3-Sampling and Hypothesis Testing-7Hrs	
3.1	Sampling: Types of studies, Sampling, and bias, Sampling distribution of the sample mean,	1
3.2	Conditions for inference with the SDSP, Sampling distribution of the sample proportion, Conditions for inference with the SDSP,	1
3.3	Hypothesis Testing: Independent and Dependent Variables, models, residuals, Sample distributions under null and alternative hypotheses,	1
3.4	P-values: definition, tails, and misinterpretations, P-z combination that you should memorize, Degrees of freedom, Type 1 and Type 2 errors,	1
3.5	Parametric vs. non-parametric tests, Multiple comparisons, and Bonferroni correction, Statistical vs. theoretical vs. clinical significance, Cross-validation, Statistical significance vs. classification accuracy,	1
3.6	The T-Test Family: Purpose and interpretation, One-sample t-test, The role of variance, Two-samples t-test,	1
3.7	Importance of Nfort-test, Wilcoxon signed-rank (nonparametric test),	1
3.8	Mann-Whitney U test (nonparametric test), U test, Permutation testing for t-test, significance, Python Implementation	1
	Module 4-Confidence Intervals, Correlation and Anova-8Hrs	
4.1	Confidence Intervals on Parameters: Computing confidence intervals via formula, Confidence intervals via bootstrapping (resampling), Misconceptions about confidence intervals	1
4.2	Correlation: Motivation and description of correlation, Covariance, and correlation: formulas, Correlation matrix,	1
4.3	correlation to the covariance matrix, Partial correlation, The problem with Pearson, Nonparametric correlation: Spearman rank, Fisher-Z transformation for correlations,	1
4.4	Spearman correlation, the confidence interval on the correlation, Kendall's correlation for ordinal data, The subgroup correlation paradox, Cosine similarity,	1
4.5	Analysis of Variance: Sum of squares, The F-test and the ANOVA table, The omnibus F-test and posthoc comparisons,	1
4.6	The two-way ANOVA, One-way ANOVA example,	1
4.7	Two-way ANOVA example,	1
4.8	Regression: Introduction to GLM/regression, Least-squares solution to the GLM, Evaluating regression models: R ² and F, Simple regression, code	1
	Module 5-Regression, Clustering and PCA-9Hrs	
5.1	Regression: Multiple regression, Standardizing regression coefficients	1
5.2	Polynomial regression models, Logistic regression,	1
5.3	Under and over-fitting, comparing "nested" models, missing data,	1
5.4	Statistical Power and Sample Tests Estimating statistical power and sample size, Compute power and sample size using G*Power,	1

5.5	ClusteringAndDimension-Reduction -K-meansclustering,K-means,and normalization, K-means on a Gauss blur, Clustering via dbscan	1
5.6	dbscanvs.k-means,K-nearestneighborclassification,Principalcomponents analysis,	1
5.7	K-meansonPCdata,independentcomponentsanalysis,	1
5.8	SignalDetectionTheory :d-prime,Responsebias	1
5.9	F-score,Receiveroperatingcharacteristics(ROC),PythonImplementation	1

CODE	ETHICS FOR DATA SCIENTISTS	CATEGORY	L	T	P	CREDIT
25PADT124		PROGRAM ELECTIVE2	3	0	0	3

Preamble:

This course is intended to provide an introduction to critical and ethical issues using data and its implications in the society. This course helps the learners to understand the benefits and drawbacks of using data while using them for making predictions by understanding the structure of ethics, law, and societal values. Also, this course blends social and historical perspectives on data with ethics, policy, and case examples to help students develop a workable understanding of current ethical issues in data science.

Course Outcomes:

After the completion of the course, the student will be able to

CO 1	Applying the concept of ethics, and the necessity and the benefit of adopting shared ethical principles in Data Science (Cognitive knowledge level: Apply)
CO 2	Analyze the role of an IRB in a human subject's study and the difference between data collected for business purposes versus research purposes and relate how this changes the requirement for IRB approval. (Cognitive knowledge level: Apply)
CO 3	Distinguish between the three main categories of intellectual property and identify the data owner (Cognitive knowledge level: Apply)
CO 4	Describe the reasonable expectation of privacy relates to data collection and recognize the voluntary limits on the use of data that arise out of social consensus. (Cognitive knowledge level: Apply)
CO 5	Apply data ethics while practicing Data Science. (Cognitive knowledge level: Apply)
CO 6	Identify invalid data, incorrect models, biased algorithms, and bad analysis conducted on good data (Cognitive knowledge level: Apply)

Program Outcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

AssessmentPattern

Bloom'sCategory	EndSemesterExamination
Apply	50-80%
Analyse	20-40%
Evaluate	Assignments/Projects
Create	Assignments/Projects

Markdistribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5hours

Continuous InternalEvaluationPattern:

Evaluation shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

ContinuousInternalEvaluation:40marks

- Preparing a review article based on peer-reviewed or original publications (minimum 10 publications shall be referred) : 15 marks
- Course based task/Seminar/Data collection and interpretation: 15 marks
- Test paper (1 number): 10 marks

Testpapers shall include a minimum 80% of the syllabus.

Course-based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation, and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts: Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem-solving and quantitative evaluation), with a minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Illustrate an example of a situation, in which we all, as a society, are better off, because we agree to behave ethically.
2. Company X has learned about Facebook's mood manipulation experiment and believes that a happy person is much more likely to buy than a grumpy one. Therefore, it has designed its website to tell heart-warming stories in callout boxes on every page. These stories, at best, are tangentially related to the products being sold on the page. They A/B test this website before launch to see if the story boxes do have the intended effect. They find that the boxes do have the desired effect of increasing sales. They then adopt the new website design with the story boxes, and they write an article describing their findings in a Marketing Journal.

Discuss:

Does Company X need to inform its customers about this effort? To what extent? Does it need to obtain consent? If so, for what? If you answered YES to the consent question above, what is the smallest change to the scenario described above that would make you change your answer to NO?

3. You go to the bus stop, and everyone is patiently in line waiting for the bus. Rather than wait in line, you just jump onto the bus when it arrives. Discuss the ethics about your behavior- whether it is legal/ethical/ unethical/ unethical and legal/ ethical and illegal etc
4. You conduct research on user interface design. You wish to evaluate a new layout you have developed for presenting the results of a web search. For this purpose, you need to get the opinions of several users. Even though the users of your new interface have no possibility of suffering any harm, and furthermore your test is no more intrusive than the A/B testing performed by so many web companies, Discuss- is it true that you are nevertheless required to obtain IRB clearance?

Course Outcome 2(CO2)

1. Creative Commons has a set of standard copyright licenses that are used widely. This course as a whole is released CC-BY-NC, which means it can be reproduced with attribution (BY) for non-commercial use (NC). Individual components are released CC BY-NC-ND, which means they can be reproduced with attribution (BY) for non-commercial use (NC) without making any changes (ND = no derivatives). Discuss whether it is OK to reuse, with attribution, a single video from this course in your own (non-commercial) presentation.
2. You conduct research on user interface design. You wish to evaluate a new layout you have developed for presenting the results of a web search. For this purpose, you need to get the opinions of several users. Even though the users of your new interface have no possibility of suffering any harm, and furthermore your test is no more intrusive than the A/B testing performed by so many web companies, is it true that you are nevertheless required to obtain IRB clearance?
3. Analyse- You have designed a human subjects experiment with appropriate provision for informed consent, and you submit this to the appropriate IRB. The IRB will automatically approve your experiments since you have demonstrated you will properly obtain informed consent.

CourseOutcome3(CO3):

1. If teenagers knew that their parents could have access to all their social media posts, then the teenagers would likely be very careful about what they post - Assess
2. I agree to pose for some photographs you take with the promise that you will keep these photos private. Some years later, you change your mind and publish these photos. Since you own these photos, are you within your rights?, Evaluate the action.

CourseOutcome4(CO4):

In terms of undesired use of data, there are three distinct steps. Justify your answer for each of the following three questions about whether it violates privacy.

1. Undesired collection of personal data violates privacy.
2. Undesired analysis of previously collected personal data violates privacy.
3. Undesired dissemination of previously collected personal data violates privacy.
4. A major shortcoming of all-or-nothing data access policies (e.g., when an app wants access to your location data) is that it defeats privacy because you have no control over any data you choose to share with the app - Discuss

CourseOutcome5(CO5):

1. It turns out that the government funding for public health departments is computed on a formula that is heavily dependent on the number of cases of flu. For efficiency, the government decides to adopt Google flu numbers for this parameter. If you run a public health department, you seek to maximize your funding by asking the public in your county to perform searches for flu. Will this work? Evaluate.
2. The university in the preceding question conducts some additional investigation, and determines that both the mean and the median scores obtained by minority applicants on the standardized test are substantially lower than the corresponding mean and median for other students. Based on this fact, in conjunction with the facts from the preceding question, can we conclude that the test is unfair to a minority applicant? Justify

3. A university uses performance on a standardized test as the only scoring mechanism used to admit applicants. The university observes that it is admitting far fewer minority students than their proportion in the population at large. Based on only these facts, can we conclude that the test is unfair? Justify your answer

Course Outcome 6 (CO6):

1. Your city has decided to make property tax payment data semi-public: you just have to enter your property identifier to get that information.

Your neighbor has a small business that you have invested in, and are feeling nervous about. You enter your neighbor's property ID into the city system to check on your neighbor's tax payments. You find that he has missed paying the last two quarters, after many years of paying on time. You suspect a cash flow crunch in his business and ask for your loan back.

Your neighbor is forced to sell some business assets to pay you back. Another investor sees this sale of business assets, and also decided to liquidate her investment. In this manner, problems snowball, until your neighbor is driven out of business.

Whose fault is it, if any? Identify specific steps where some ethical rule was violated.

2. You work for a major cellphone service provider and have access to large volumes of detailed location data for your customers. One day, you are able to correlate location with building footprints and hence determine whether the cell phone user (your customer) is indoors or outdoors. On this basis, you obtain analytical results that lead to a new signal amplification algorithm that is amazingly effective in improving call quality. You surprise yourself, your boss, and your company, with these results. Does this analysis violate the—Do Not Surprise! rule? Evaluate
3. Seeking to expand their business and improve their product, suppose that Amazon sends a survey to all Kindle owners asking them what they like and dislike about their Kindle. What validity concerns would you have about the survey results obtained? If the primary goal is to grow Kindle sales, what could Amazon do to get more valid data?

PARTA		
AnswerAllQuestions. EachQuestionCarries5 Marks		
1.	BrieflyexplaintheimportanceofInstitutionalReviewBoardsandIndependent Ethics Committees	5
2.	DiscussthevarioustypesofIntellectualPropertyRights	5

3.	a. I am a fan of art called mauve pottery. I painstakingly create a directory of mauve potters around the world. I publish this directory, copyrighted, with all rights reserved. Is it OK for you to make a copy of this directory for use in your (non-commercial) class? b. In the example of the preceding question, is it OK for you to publish a new version of this directory showing the locations of all mauve potters on a map? c. Many psychology experiments are conducted on the university campus by academic researchers. The human subjects recruited tend to be college students, who are generally younger and smarter than the population as a whole. This is clearly not a representative sample of the general population. To show the universal validity of an important effect, researchers went off-campus to a nearby city and recruited volunteer subjects by offering a small cash incentive for their time. i. This second experiment is a good random sample of the population ii. This second experiment is not a good random sample either, and so is pointless. iii. This second experiment is not a good random sample but is still valuable. Explain and justify your answer.	5
4.	a. In machine learning, it is common practice to use k-fold cross-validation, where the data set is divided into k parts. k-1 of these are used for training and the remaining part is used for testing. And this can be repeated k times, leaving out a different part each time. Appraise is this a good way to measure how well the learned model predicts the test data (labels, values, or whatever is being predicted)? b. Based on face recognition technology applied to records from in-store video cameras, Fancy Store is immediately able to identify you when you enter their store if you have shopped there before. If you are identified as a high-value shopper, from your previous purchasing history in the store, a personal shop assistant is immediately assigned to stay with you during your visit and help you choose and locate the items you want. Ordinary shoppers, not identified as high-value shoppers, do not get the same service. Is this unfair? Why or why not?	5

5.		a. A travel website has empirically determined that Mac users are more willing to pay for higher-priced hotel rooms. Therefore, the website modifies the default order in which hotels are shown, with higher-priced hotels ranking slightly higher for Mac users than for other PC users. Analyze: Is this reordering—discrimination—ethical? b. A leading algorithm-based employment agency determines, based on data analysis, that candidates with straight hair make more reliable employees than candidates with curly hair. They use this as a criterion (one among many, but with significant weight to this one) in choosing which candidates to interview, using submitted photographs with the application as their basis to determine whether hair is straight or curly. They do not tell prospective candidates what criteria they are using. This is unethical. c.	5 (5x5=25)
Part B (Answer any five questions. Each question carries 7 marks)			
6.	(a)	Analyze the impact of not following the data ethics in business	(7)
7.	(a)	Discuss the importance of ethics-centricity in data projects	(7)
8.	(a)	Appraise Modern Privacy Risks and Protection Strategies in Data Analytics	(7)
9.	(a)	Discuss the case study of targeted advertisement, whether it is helpful or annoying. If annoying, is there any method digitally to avoid that?	(3)
	(b)	Discuss the Case Study of data privacy breach: Sneaky Mobile Apps	(4)
10.	(a)	a. Explain choosing attributes that we will use to achieve our objectives and methods of measuring them.	(4)
	(b)	b. Explain the errors in the data processing	(3)
11.	(a)	a. Explain the need for algorithm fairness	(2)
	(b)	Discuss removing bias from hiring algorithms	(5)

12.	(a)	Discuss the societal consequences of Data Science that we should be concerned about even if there are no issues with fairness, validity, anonymity, privacy, ownership or human subjects research	(3.5)
	(b)	Discuss Social Credit Scores and its societal consequences	(3.5)

Syllabus

MODULE NO	CONTENT	HOURS
I	Introduction: Ethics, Definition, what is Data Ethics? Need of Data Science Ethics, Examples, Case Study and Discussion. Human Subject Research and Informed Consent, Cases, US Institutional Review Board (IRB), IRB in India, Limitations of Informed Consent, Case Study and Discussion.	8
II	Data Ownership and Privacy: Data ownership, Limits of Recording Data and Using Data, Intellectual Property rights, Privacy: Introduction, History, Degrees, Privacy Risks, Case Studies- Targeted Ads, The Naked Mile. Sneaky Mobile Apps, and Discussion, Anonymity: De-Identification, Case Studies, and Discussion	8
III	Data Validity: Validity: Introduction, Choices of Attribute and Pressures, Errors in Data Processing, Errors in Model Design, Managing Change, Case Study- Three Blind Mice, Algorithms and Race, Algorithms in the Office, GermanWings Crash, Google Flu, and Discussion	8
IV	Algorithmic Fairness: Algorithm Fairness: Introduction, Correct and Misleading results, Hiring algorithms, P Hacking, Case Study- High Throughput Biology, Geopricing, Your Safety Is My Lost Income and Discussion- fairness of applying face recognition to give preference to the often visiting customers in business	8
V	Societal Consequences: Introduction, Societal Impact, Ossification, Surveillance, Code of ethics, Wrap Up, Case Studies- Social Credit Scores, Predictive Policing, and Discussion	8

		PROGRAM ELECTIVE-2	3	0	0	3

Preamble

The course aims to introduce the student to the various aspects of speech processing including modelling of human speech. The topics covered in the course includes Computational Phonology, Models of Spelling and Pronunciation, speech synthesis and speech recognition. It helps the learners to develop application involving speech processing.

Course Outcomes: After the completion of the course the student will be able to

CO1	Analyse the different aspects of production of speech in humans (Cognitive Knowledge Level: Analyse)
CO2	Make use of the methods used for spelling error detection and correction (Cognitive Knowledge Level: Apply)
CO3	Illustrate the various models for speech pronunciation variations (Cognitive Knowledge Level: Apply)
CO4	Make use of the different models for recognizing human speech and converting into equivalent text (Cognitive Knowledge Level: Apply)
CO5	Comprehend the processes involved in the acoustic processing of human speech (Cognitive Knowledge Level: Apply)
CO6	Design, Develop, and Implement innovative ideas on speech processing concepts and techniques. (Cognitive Knowledge Level: Create)

Program Outcomes

Graduates of this program will be able to demonstrate the following attributes.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2:An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialisation of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4:An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tools to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects.

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

ContinuousInternalEvaluationPattern:

Evaluationshallonlybebasedonapplication,analysisordesignbased questions (for both internal and end semester examinations).

ContinuousInternalEvaluation:40marks

- i. Preparingareviewarticlebasedonpeerreviewedoriginalpublications(minimum 10 publications shall be referred) : 15 marks
- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation:15marks
- iii. Testpaper(1number) :10marks

Testpapershallincludeminimum80%ofthesyllabus.

Course based task/test paper questions shall be useful in the testing of knowledge,skills,comprehension,application,analysis,synthesis,evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective college.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Explain the various vocal organs and how they produce speech phones.
2. Draw and explain the transducer for z-devoicing rule.

Course Outcome 2 (CO2):

1. Write brief notes on the noisy channel model of pronunciation and spelling.
2. What is meant by the minimum edit distance between two strings. Calculate the minimum edit distance between the words 'kitten' and 'sitting'.

Course Outcome3 (CO3):

1. Illustrate the concept of pronunciation dictionaries with an example.
2. Discuss the various phonological aspects of prosody in speech.

Course Outcome4 (CO4):

1. Give a brief overview of the Bayesian model of speech recognition.
2. List and briefly explain the various parameters needed to define an HMM.

Course Outcome5 (CO5):

1. Highlight the steps involved in extraction of spectral features from sound wave.
2. List the different approaches for calculating probabilities of acoustic feature vectors.

25PADT126	INFORMATION THEORY	CATEGORY	L	T	P	CREDIT
		PROGRAM ELECTIVE 2	3	0	0	3

Preamble: The course introduces the mathematical and fundamental notions of information theory that play a significant role in building modern communication systems. It covers entropy, mutual information, source coding, channel coding, continuous sources and channels and rate distortion theory. The course enables the learners to effectively choose appropriate source codes and channel codes according to different applications.

Course Outcomes:

After the completion of the course the student will be able to

CO 1	Compare different types of entropy and use the concept of mutual information. (Cognitive Knowledge Level: Apply)
CO 2	Design source codes and appreciate the use of Shannon's source coding theorem. (Cognitive Knowledge Level: Apply)
CO 3	Design channel codes and appreciate the use of Shannon's channel coding theorem. (Cognitive Knowledge Level: Apply)
CO 4	Demonstrate the notions of continuous sources and channels. (Cognitive Knowledge Level: Apply)
CO 5	Elaborate on the various aspects of the rate distortion theorem. (Cognitive Knowledge Level: Apply)
CO 6	Design, Develop, and Implement applications using Information theory concepts and techniques. (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions

Course Outcome 1 (CO1):

1. A source produces 4 symbols with probabilities $\frac{1}{2}, \frac{1}{2}, \frac{1}{8},$ and $\frac{1}{8}$. Find the information content of each symbol.
2. A zero memory source has a source alphabet, $S = \{s_1, s_2, s_3\}$ with $P = \{0.5, 0.3, 0.2\}$. Find the entropy of the source.
3. Given a binary source with two symbols x_1 and x_2 . Given x_2 is twice as long as x_1 and half as probable. The duration of x_1 is 0.3 seconds. Calculate the information rate of the source.

Course Outcome 2 (CO2)

1. Consider a $[7, 4]$ linear block code with parity check matrix

$$\begin{array}{c}
 1\ 0\ 1\ 1\ 1\ 0\ 0 \\
 H = 1\ 1\ 0\ 1\ 0\ 1\ 0 \\
 0\ 1\ 1\ 1\ 0\ 0\ 1
 \end{array}$$

a) Construct codewords for the [7,4] code.

b) Show that this code is a Hamming code.

2. Consider a source with 8 alphabets, a to h with respective probabilities 0.2, 0.2, 0.18, 0.15, 0.12, 0.08, 0.05 and 0.02. Construct a minimum redundancy code and determine the code efficiency.

3. The parity matrix for a (6,3) systematic linear block code is given by

(i) Find all codewords. (ii) Find generator and parity check matrix.

Course Outcome 3(CO3):

1. State and prove Shannon's channel coding theorem.
2. Derive the capacity of a binary symmetric channel.
3. State and prove source channel theorem.

Course Outcome 4(CO4):

1. Derive the differential entropy of a normal distribution.
2. Derive the chain rule for differential entropy.
- 3.

Course Outcome 5(CO5):

1. State and prove the converse to the rate distortion theorem.
2. Evaluate the rate distortion function for a binary source.

Model Question Paper

QPCODE:

Reg No: _____

Name: _____ **PAGES:2**

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

FIRST SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT126

Course Name: Information Theory

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Derive the relation between entropy and mutual information.
2. State Kraft-McMillan inequality.
3. Explain channel coding theorem.
4. Discuss about Gaussian channels.
5. Define rate distortion theorem.

**(5x5
=25)**

Part B

(Answer any five questions. Each question carries 7 marks)

6. Differentiate between joint entropy and conditional entropy. (7)
7. Suppose one has n coins, among which there may or may not be one counterfeit coin. If there is a counterfeit coin, it may be either heavier or lighter than the other coins. The coins are to be weighed by a balance. (7)
- a) Find an upper bound on the number of coins n so that k weighings will find the counterfeit coin (if any) and correctly declare it to be heavier or lighter. b) What is the coin weighing strategy for $k = 3$ weighings and 12 coins?
8. Find a binary Huffman code for the source emitting symbols with probabilities 0.49, 0.14, 0.14, 0.07, 0.04, 0.02, 0.02, 0.01. Also find the code efficiency and redundancy. (7)
9. Explain with the help of a neat diagram, discrete memoryless channel with feedback. (7)
10. Consider the random variable. (7)
- a) Find a binary Huffman code for X .
- b) Find the expected code length for this encoding.
- c) Find a ternary Huffman code for X .
11. Consider the discrete memoryless channel $Y = X + Z \pmod{11}$, where (7)
- and $X \in \{0, 1, 2, \dots, 10\}$. Assume that Z is independent of X .
- a) Find the capacity.
- b) What is the maximizing $p^*(x)$?

12. Consider a source X uniformly distributed on the set $\{1, 2, \dots, m\}$. Find the rate distortion function for this source with Hamming distortion, i.e.,

(7)

$$d(x, \hat{x}) = \begin{cases} 0 & \text{if } x = \hat{x}, \\ 1 & \text{if } x \neq \hat{x}. \end{cases}$$

Syllabus

Entropy, lossless source coding, Huffman code, Shannon's source coding theorem, Shannon's channel coding theorem, continuous sources and channels, rate distortion theory.

	Syllabus	
Module	Content	Hours
1	Introduction to Entropy: Entropy- Memoryless sources - Markov sources Entropy of a discrete random variable - joint, conditional and relative entropy-mutual Information and conditional mutual information - Chain relation for entropy, relative entropy and mutual information	12
2	Lossless source coding -Uniquely decodable codes-Instantaneous codes Kraft's inequality - Optimal codes - Huffman code- Shannon's Source Coding Theorem.	7
3	Channel coding -Shannon's Channel Coding Theorem and its converse- Channels with feedback - Joint source channel coding Theorem.	7
4	Continuous Sources and Channels: Continuous Sources and Channels- Differential Entropy-Joint, relative and conditional differential entropy- Mutual information- Waveform channels- Gaussian channels.	7
5	Rate Distortion Theory: Introduction - Rate Distortion Function - Properties - Continuous Sources and Rate Distortion measure - Rate Distortion Theorem- Converse- Information Transmission Theorem- Rate Distortion Optimization.	7

25PADL104	ADVANCED MACHINE LEARNING LAB	CATEGORY	L	T	P	Credit
		Laboratory1	0	0	2	2

Preamble: Study of the course enables the learners to make use of the machine learning concepts and algorithms to derive data insights. The course provides exposure to the design and implementation aspects of machine learning algorithms such as decision trees, regression, naive bayes algorithm, clustering algorithms and artificial neural network. This helps the students to develop machine learning based solutions to real world problems.

Course Outcomes: After the completion of the course the student will be able to

CO#	Course Outcomes
CO1	Apply modern machine learning notions in predictive data analysis (Cognitive Knowledge Level: Apply)
CO2	Analyze the range of machine learning algorithms along with their strengths and weaknesses (Cognitive Knowledge Level: Analyze)
CO3	Design and develop appropriate machine learning models to solve real world problems. (Cognitive Knowledge Level: Analyze)
CO4	Build predictive models from data and analyze their performance (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

CO4							

Continuous Internal Evaluation Pattern:

The laboratory courses will be having only Continuous Internal Evaluation and carries 100 marks.

Final assessments shall be done by two examiners; one examiner will be a senior faculty from the same department.

Continuous Evaluation : 60 marks

Final internal assessment: 40 marks

Lab Report:

All the students attending the Lab should have a Fair Report. The report should contain details of experiment such as Objective, Algorithm/Design, Description, Implementation, Analysis, Results, and Outcome. The report should contain a print out of the respective code with inputs addressing all the aspects of the algorithm described and corresponding outputs. All the experiments noted in the fair report should be verified by the faculty regularly. The fair report, properly certified by the faculty, should be produced during the time of the final assessment.

Syllabus

Decision tree (ID3), Naïve bayesian classifier , Bayesian network, Expectation Maximization (EM) algorithm, K-means algorithm, K-nearest neighbor, Regression, Cross validation, Support Vector Machine (SVM), Artificial neural network, Backpropagation algorithm, Recurrent Neural Networks (RNN), Long Short Term Memory (LSTM), Google colab.

Practice Questions

1. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
2. Write a program to implement the naïve bayesian classifier for a sample training dataset stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
3. Assuming a set of documents that need to be classified, use the naïve bayesian Classifier model to perform this task. Calculate the accuracy, precision, and recall for your dataset.
4. Write a program to construct a Bayesian network considering medical data. Use this model to demonstrate the diagnosis of heart patients using standard Heart Disease Data Set. You can use Python ML library classes/API.
5. Apply EM algorithm to cluster a set of data stored in a .CSV file. Use the same data set for clustering using k-Means algorithm. Compare the results of these two algorithms and comment on the quality of clustering. You can add Python ML library classes/API in the program.
6. Write a program to implement k-Nearest Neighbour algorithm to classify the iris dataset. Print both correct and wrong predictions. Python ML library classes can be used for this problem.
7. Implement the non-parametric Locally Weighted Regression algorithm in order to fit data points. Select appropriate data set for your experiment and draw graphs.
8. Write a program to implement 5-fold cross validation on a given dataset. Compare the accuracy, precision, recall, and F-score for your data set for different folds.

9. Implement SVM/Softmax classifier for CIFAR-10 dataset: (i) using KNN, (ii) using 3 layer neural network.
10. Build an Artificial Neural Network by implementing the Backpropagation algorithm and test the same using appropriate data sets.
11. Image Captioning with Vanilla RNNs.
12. Image Captioning with LSTMs.
13. Familiarisation of cloud based computing like Google colab.

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PCST201	ADVANCED DATA STRUCTURES AND ALGORITHMS	DISCIPLINE CORE 2	3	0	0	3

Preamble: The course introduces advanced data structures and algorithms in different domains. The goal of this course is to provide a solid background in the design and analysis of the major classes of algorithms. The course helps the learner to develop their own versions for a given computational task and to compare and contrast their performance.

Course Outcomes: After the completion of the course, the student will be able to: *

CO1	Analyse the relevance of amortized analysis and applications. (Cognitive Level: Apply)
CO2	Illustrate string matching algorithms. (Cognitive Level: Apply)
CO3	Illustrate advanced data structures like Binomial heap, Fibonacci heap, Disjoint set and string matching algorithms. (Cognitive Level: Apply)
CO4	Illustrate network flow algorithms and applications. (Cognitive Level: Apply)
CO5	Make use of probabilistic algorithms and approximation algorithms in computing. (Cognitive Level: Apply)
CO6	Design, develop and implement software using advanced data structures and algorithms. (Cognitive Level: Create)

* The COs shown are only indicative. For each course, there can be 4 to 6 COs.

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

Micro project/Course based project: 20 marks

Course based task/Seminar/Quiz : 10 marks

Test paper, 1 no. : 10 marks

The project shall be done individually. Group projects not permitted.

Test paper shall include minimum 80% of the syllabus.

Course based task/test/paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the University. There will be two parts; Part A and Part B. Part A contain 5 numerical questions with 1 question from each module, having 5 marks for each question. (such questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Explain how the accounting method of amortized analysis can be applied to stack operations.
2. Suppose we perform a sequence of n operations on a data structure in which the i^{th} operation costs i if i is an exact power of 2, and 1 otherwise. Use aggregate analysis to determine the amortized cost per operation.
3. What is the total cost of executing n of the stack operations PUSH, POP, and MULTIPOP, assuming that the stack begins with s_0 objects and finishes with s_n objects? Use potential method.

Course Outcome 2 (CO2)

1. Use an aggregate analysis to show that the running time of KMP-MATCHER is $\Theta(n)$.
2. Working modulo $q = 11$, how many spurious hits does the Rabin-Karp matcher encounter in the text $T = 3141592653589793$ when looking for the pattern $P = 26$?
3. Compute the prefix function π for the pattern $ababbabbabbabbabb$

Course Outcome 3 (CO3):

1. Analyze the time complexity of decrease-key operation of Fibonacci heap.
2. Illustrate extract-min operation of Binomial heap.

3. Explain the heuristics used in disjoint set data structure to improve the running time.

Course Outcome 4 (CO4):

1. Show the execution of the Edmonds-Karp algorithm on the given flow network (source: A and sink: J).

2. In the following figure, compute flow across the cut $(\{s, v_2, v_4\}, \{v_1, v_3, t\})$. What is the capacity of this cut?

State and prove max flow min cut theorem.

Illustrate Miller-Rabin primality testing method.

Explain probabilistic selection algorithm.

Explain the approximation algorithm for subset sum problem.

Consider each of the following words as a set of letters: $\{arid, dash, drain, heard, lost, nose, shun, slate, snare, thread\}$. Show which set cover GREEDY-SET-COVER produces when we break ties in favor of the word that appears first in the dictionary.

Model Question Paper

QPCODE:

RegNo: _____

Name: _____ PAGES: 4

APJABDULKALAM TECHNOLOGICAL UNIVERSITY

SECOND SEMESTER, TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PCST201

Course Name: ADVANCED DATA STRUCTURES AND ALGORITHMS

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. Explain accounting method of amortized analysis with a suitable example.
2. Explain the algorithm for uniting two binomial heaps and analyze the running time.
3. Maximum matching in a bipartite graph G corresponds to a maximum flow in its corresponding flow network G' . Comment on this statement. Explain how maximum flow problem can be used to solve maximum bipartite matching problem.
4. Explain the probabilistic algorithm for verifying matrix multiplication problem.
5. Explain the approximation algorithm for traveling salesperson problem.

Part B

(5x5=25)

(Answer any five questions. Each question carries 7 marks)

6. Describe Knuth-Morris-Pratt algorithm and illustrate using given text $T = \text{AABAACAADAABAABA}$ and pattern $P = \text{AABA}$.
(7)
7. (a) Using potential method, compute the amortized cost of incrementing a binary counter.
(3)
(b) Suppose we perform a sequence of n operations on a data structure in which the i^{th} operation costs i if i is an exact power of 2, and 1 otherwise. Use accounting method of amortized analysis to determine the amortized cost per operation.
(4)
8. (a) Explain how disjoint set data structure is used to find connected components on an undirected graph.
(3)

- (b) Show the binomial heap that results when a node with key 11 is deleted from the binomial heap shown in figure. (4)
9. (a) Explain the structure of Fibonacci heap. (2)
- (b) Apply extract minimum operation on the Fibonacci heap shown in figure and show the result. (5)
10. Describe Ford-Fulkerson algorithm and apply on the following network. Also obtain minimum cut across the network. (7)
11. (a) Apply Miller-Rabin algorithm to test whether the number 341 is prime or not. (4)
- (b) Explain probabilistic quicksort algorithm. (3)
12. (a) Describe polynomial-time approximation scheme and fully polynomial-time approximation scheme. (3)
- (b) Give an example of a graph for which APPROX-VERTEX-COVER always yields an optimal solution. (4)

Syllabus

Module–1(AmortizedanalysisandStringmatching)

Overviewofasymptoticnotationsandcomplexityanalysis,Amortizedanalysis –aggregate analysis, accounting method, potential method.

Stringmatching–introduction,Rabin-Karpalgorithm,Knuth-Morris-Prattalgorithm.

Module–2(Advanceddatastructures)

Overview of binary heap operations, Binomial tree and heap, Binomial heap operations, Fibonacci heap structure, Fibonacci heap operations, Disjoint set – overview, linked list representation, disjoint set forests.

Module–3(Networkflow)

Network flow properties, examples, residual network, augmenting path, cut of network, maxflow-mincuttheorem,Ford-Fulkersonalgorithm,Edmonds-Karpalgorithm,maximum bipartite matching.

Module–4(Probabilisticalgorithms)

Introduction,typesofprobabilisticalgorithms,Numericalalgorithms–Numerical integration, Probabilistic counting, Monte-Carlo algorithms – Verifying matrix multiplication.

Numbertheoryfundamentals–modulararithmetic,modularexponentiation,Euler'sTheorem and Fermat's Theorem, Primality testing – Miller-Rabin test.

LasVegasalgorithms–Probabilisticselectionandquicksort.

Module–5(Approximationalgorithms)

Introduction,Vertex-coverproblem,Traveling-salesmanproblem,Set-coveringproblem, Subset-sum problem.

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADT201	DEEP LEARNING	PROGRAM CORE3	3	0	0	3

Preamble: This course introduces the core concepts of deep learning and also provides an insight into recent developments in the field. The concepts covered in the course include Neural Network Optimization techniques, Regularization, Convolutional Neural networks, Recurrent Neural Networks, Word Embedding and Transformers. This course helps the students to develop solutions to real world applications using deep learning techniques.

Course Outcomes: After the completion of the course the student will be able to:*

CO1	Analyse the challenges in learning of Neural Networks and develop solutions to overcome the issues (Cognitive knowledge level: Apply)
CO2	Construct convolutional neural networks for deep learning applications (Cognitive knowledge level: Apply)
CO3	Make use of recurrent neural network and its variants in relevant application areas (Cognitive knowledge level: Analyze)
CO4	Apply the deep learning techniques in natural language based applications (Cognitive knowledge level: Analyze)
CO5	Distinguish the transformer architecture from earlier architectures (Cognitive knowledge level: Analyze)
CO6	Design, develop and implement solutions based on Deep Learning concepts and techniques (Cognitive knowledge level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

(such questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students). Students shall answer all questions.

Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks.

Total duration of the examination will be 150 minutes.

CourseLevelAssessmentQuestions

Course Outcome 1 (CO1):

1. Apply the Adam optimization algorithm to an example of your choice and implement it using appropriate tools..
2. Explore the validity of the statement:—Computational complexity due to Batch normalization is proportional to the size of the mini batch l.

CourseOutcome2(CO2)

1. Design and sketch a CNN for any application of your choice.
2. Differentiate between a CNN and an autoencoder in terms of architecture and applications.
3. Demonstrate the use of transfer learning in natural language processing.

Course Outcome 3(CO3):

1. Illustrate the workflow inside an RNN by using an example.
2. In comparison to an RNN, how many orders of excess computation are there in an LSTM?
3. Implement any sequence-to-sequence based application using RNN and LSTM. Analyse which one of these two is more relevant for your application.

CourseOutcome4(CO4):

1. Provide schematic diagrams showing input, output and hidden layers along with their connectivity for the word2vec embedding method.
2. Analyse how good BERT is in the application area of automated question answering.
3. Derive the loss functions used for training of a GAN.

Course Outcome 5 (CO5):

1. Differentiate between self-attention and multi-head attention.
2. Justify the statement:—"Vision transformer is an adaptation of the transformer architecture for computer vision applications".
3. Analyse the computational complexities involved in large scale pretraining of transformers.

CourseOutcome6(CO6):

1. Develop a deep learning model as a solution to a real world problem and analyse its performance.

Model Question Paper			
QPCODE:			
Reg No: _____			
Name: _____ PAGES:4			
APJABDULKALAM TECHNOLOGICAL UNIVERSITY			
SECOND SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR			
Course Code: 25PADT201			
Course Name: DEEP LEARNING			
Max. Marks: 60		Duration: 2.5 Hours	
PART A			
Answer All Questions. Each Question Carries 5 Marks			
1.		Consider a simple perception f such that $f: \mathbb{R}^4 \rightarrow \mathbb{R}$ which uses sigmoid as its activation function. The inputs are $X = [0.1, 0.2, 0.3, 0.4]$ and the corresponding weights $W = [-0.2, 0.1, 0.2, 0.3]$. Compute the derivative of sigmoid of $z(\sigma'(z))$, where z is a linear combination of weights vector W and input vector X . Ignore the bias term.	
2.		Illustrate convolution and pooling operation with an example.	
3.		Explain the relevance of LSTM in the context of recurrent neural networks..	
4.		Describe the word2vec technique of word embedding.	
5.		Illustrate the concept of self-attention in transformers.	(5x5=25)
Part B (Answer any five questions. Each question carries 7 marks)			

6.	a	Explain the concepts behind i) Early stopping ii) dropout iii) weight decay	(4)
	b	Using Adagrad-based gradient descent, find the new value of parameter θ_{t+1} , given that the old value $\theta_t=0.7$, aggregated gradient $\Delta\theta_t=0.9$, gradient accumulation $r_{t-1}=0.6$, learning rate $\alpha=0.1$ and small constant $\delta=10$.	(3)
7.	a	The input to a CNN architecture is a color image of size $112 \times 112 \times 3$. The first convolution layer comprises 64 kernels of size 5×5 applied with a stride of 2 and padding 0. What will be the number of parameters?	(3)
	b.	Explain how the Vanishing and Exploding gradient problem is addressed in ResNet.	(4)
8.		Explain the working of RNN and discuss how backpropagation through time is used in recurrent networks.	(7)
9.		Illustrate the GloVe technique of word embedding.	(7)
10.		Demonstrate the workflow of the BERT technique of word embedding.	(7)
11.		Justify the need for self-attention in the transformer architecture.	(7)
12.		Illustrate the architecture of a Vision transformer.	(7)

Syllabus

Module 1: Introduction to Deep Learning	(8 hours)
Deep Learning vs traditional machine learning, Gradient Descent, Adam Optimization, Weight initialization strategies, Batch Normalization, Regularization techniques, Cross entropy loss function	
Module 2: Convolutional Neural Networks	(9 hours)
Convolution operation, CNN layers, Building a CNN model, Training a CNN, Deep Autoencoders,	
Module 3: Recurrent Neural Networks	(8 hours)
Basic architecture and variants, Backpropagation through time, LSTM, Deep recurrent neural networks, Machine Translation, Encoder Decoder architecture, Sequence to sequence learning, Beam search	
Module 4: Text processing using deep learning	(8 hours)

Word embeddings, word2vec, GloVe, Subword embedding, BERT
Module 5: Transformers (8 hours)
Bahdanau attention, Multi-head attention, Self-attention and positional encoding, Transformer architecture, Transformers for vision, Large-scale pretraining with transformers

25PADP206	MINIPROJECT	PROJECT	0	0	4	2

Mini project can help to strengthen the understanding of student's fundamentals through application of theoretical concepts and to boost their skills and widen the horizon of their thinking. The ultimate aim of an engineering student is to resolve a problem by applying theoretical knowledge. Doing more projects increases problem solving skills.

The introduction of mini projects ensures preparedness of students to undertake dissertation. Students should identify a topic of interest in consultation with PG Programme Coordinator that should lead to their dissertation/research project. Demonstrate the novelty of the project through the results and outputs. The progress of the mini project is evaluated based on three reviews, two interim reviews and a final review. A report is required at the end of the semester.

Evaluation Committee-Programme Coordinator, One Senior Professor and Guide.

Sl.No	Type of evaluations	Mark	Evaluation criteria
1	Interim evaluation 1	20	
2	Interim evaluation 2	20	
3	Final evaluation by a Committee	35	Will be evaluating the level of completion and demonstration of functionality/ specifications, clarity of presentation, oral examination, work knowledge and involvement
4	Report	15	the committee will be evaluating for the technical content, adequacy of references, templates followed and permitted plagiarism level (not more than 25%)
5	Supervisor/Guide	10

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADL207	DEEPLARNINGLAB	LABORATORY 2	0	0	2	1

Preamble: This course provides a practical introduction to deep learning algorithms in Python. This course includes programming exercises in computer vision, time series, natural language processing and generative modelling. Upon completing the course, the student will acquire the skills necessary to develop applications using deep learning frameworks.

CourseOutcomes: After the completion of the course the student will be able to

CO#	CourseOutcomes
CO1	Implement deep learning techniques to solve problems in computer vision (Cognitive Knowledge Level: Apply)
CO2	Implement deep learning techniques to solve problems involving time series data (Cognitive Knowledge Level: Apply)
CO3	Implement deep learning techniques to solve problems in text processing (Cognitive Knowledge Level: Apply)
CO4	Implement deep learning techniques to develop generative modeling (Cognitive Knowledge Level: Apply)

ProgrammeOutcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large. PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5:An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6:An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Continuous Internal Evaluation Pattern:

The laboratory courses will have only Continuous Internal Evaluation and carries 100 marks. Final assessment shall be done by two examiners; one examiner will be a senior faculty from the same department.

Continuous Evaluation : 60 marks

Final internal assessment: 40 marks

Lab Report:

All the students attending the Lab should have a Fair Report. The report should contain details of experiment such as Objective, Algorithm/Design, Description, Implementation, Analysis, Results, and Outcome. The report should contain a print out of the respective code with inputs addressing all the aspects of the algorithm described and corresponding outputs. All the experiments noted in the fair report should be verified by the faculty regularly. The fair report, properly certified by the faculty, should be produced during the time of the final assessment.

25PCST234	COMPUTER VISION	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: This course provides the basic concepts and advanced techniques in computer vision. The areas comprising the syllabus include modern CNN architectures, modern object detection architectures, and most recent architectures using transformers. On completion of this course, the student would have an insight into the latest deep learning techniques used in computer vision.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Express the computer vision pipeline (Cognitive knowledge level: Apply)
CO2	Explore Modern convolutional neural network architectures (Cognitive knowledge level: Apply)
CO3	Apply Modern object detection architectures (Cognitive knowledge level: Apply)
CO4	Explore Generative Adversarial Networks for computer vision (Cognitive knowledge level: Apply)
CO5	Explore recent architectures for computer vision (Cognitive knowledge level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problem taking into considerations sustainability, societal, ethical

and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Bloom's Category	End Semester Examination
Apply	30
Analyse	30
Evaluate	Can be evaluated through assignments and mini project
Create	Can be evaluated through assignments and mini project

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40

i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks

ii. Course based task/Seminar/Data collection and interpretation: 15 marks

iii. Test paper (1 number): 10 marks

Test papers shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. List the elements of the computer vision pipeline.
2. Give a case study of any two applications of computer vision.
3. Illustrate the relevance of each stage of the computer vision pipeline.

Course Outcome 2 (CO2)

- Illustrate the architecture of a CNN.
- Explore the VGGNet architecture.

- Compare the ResNet architecture with other architectures.

Course Outcome 3 (CO3):

1. Outline the general object detection framework.
2. Compare various evaluation metrics for object detection.
3. Show the workflow of the Yolo algorithm.

Model Question Paper		
QPCODE:		
Reg No: _____		
Name: _____ PAGES:4		
APJABDULKALAM TECHNOLOGICAL UNIVERSITY		
SECOND SEMESTER, TECH DEGREE EXAMINATION, MONTH & YEAR		
Course Code: 25PCST234		
Course Name: Computer Vision		
Max. Marks: 60 Duration: 2.5 Hours		
PART A		
Answer All Questions. Each Question Carries 5 Marks		
1.	Classify the various elements of computer vision.	
2.	Examine the peculiarities of the Mobile Net architecture.	
3.	Justify the elements in a general object detection framework.	
4.	Illustrate any one application of GAN in computer vision.	

Model Question Paper		
5.	Sketch the innovations in the YOLOv7 technique in comparison with other versions.	(5x5=25)
Part B		
(Answer any five questions. Each question carries 7 marks)		
6.	You are given a CNN having a total of 10 layers. Devise a way to apply transfer learning to this network.	(7)

7.	Illustrate the inner architecture of the residual block in ResNet architecture.	(7)
8.	Compare and contrast the GoogLeNet and ResNet architectures.	(7)
9.	Using a diagram, demonstrate the data flow in the Single Shot Detector architecture.	(7)
10.	Express in detail the workflow in a Yolo architecture when a 13x13 grid is applied on the input image.	(7)
11.	State the equation for total loss in a neural style transfer architecture and justify each loss term with respect to its function in the architecture.	(7)
12.	In the Vision Transformer architecture, justify the need for a trainable linear projection and show the computational steps prior to this projection.	(7)

Module 1 Introduction to Computer Vision (7 hours)
Introduction to computer vision, Computer vision, Applications of computer vision, Computer vision pipeline, Classification, Transfer learning and various approaches, Open source dataset
Module 2 Advanced CNN Architectures (9 hours)
CNN architecture and components, Image classification using CNNs, AlexNet, VGGNet, Inception and GoogLeNet, ResNet, MobileNet
Module 3 Object detection (10 hours)
General object detection framework, Object-detection evaluation metrics, Region-based convolutional neural networks, Faster R-CNN, Single-shot detector (SSD), YOLO, YOLOv3
Module 4 GAN Applications (5 hours)

DCGAN, Image-to-image translation (Pix2Pix GAN), Image super-resolution GAN (SRGAN), Neural style transfer, Visual embeddings

Module 5 Advanced architectures (9 hours)

YoloV7, Vision Transformer, TransGAN, GPV-1, Mobile-former

Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2 credit courses, the content can be for 26 hrs. The audit course in third semester can have content for 30 hours).

No	Topic	Hours
1	Introduction to computer vision

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADT231	BLOCKCHAIN TECHNOLOGIES	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: The purpose of this course is to create awareness and understanding among students on the foundation of blockchain technology. The course introduces the cryptographic principles behind blockchain and helps the students understand concepts like consensus, crypto-currency, smart contracts, use cases etc. The course enables students to develop simple decentralized applications using blockchain networks such as Ethereum.

Prerequisite: Basic knowledge in data structures and operating systems.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Illustrate and implement the cryptographic building blocks of blockchain technology. (Cognitive Knowledge Level: Apply)
CO2	Make use of the concepts of blockchain technology. (Cognitive Knowledge Level: Apply)
CO3	Summarize the classification of consensus algorithms. (Cognitive Knowledge Level: Understand)
CO4	Illustrate the concepts of first decentralized cryptocurrency bitcoin. (Cognitive Knowledge Level: Apply)
CO5	Implement smart contracts and its use cases. (Cognitive Knowledge Level: Apply)
CO6	Develop simple applications using Solidity language on Ethereum platform. (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large. PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4:An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5:An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6:An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	80%
Analyze	20%
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be referred) : 15 marks

ii. Course based task/Seminar/Data collection and interpretation	:15 marks
iii. Test paper(1 number)	:10 marks

Test papers shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks

Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions Course

Outcome 1 (CO1):

1. Distinguish between Symmetric cryptography and asymmetric cryptography.
2. Explain the working of AES algorithm.

Course Outcome 2 (CO2):

1. Categorize consensus mechanism used in blockchain.
2. Define Blockchain. Explain how decentralization of computing or processing power is achieved by a blockchain.

Course Outcome 3 (CO3):

1. Illustrate how Proof of Stake can achieve consensus among peers.
2. Explain the working of Raft protocol.

Course Outcome 4 (CO4):

1. Describe the use of genesis block.
2. Implement the mining algorithm used in bitcoin.

Course Outcome 5 (CO5):

1. Illustrate how blockchain technology can be used in supply chain management.
2. What are oracles in a blockchain ecosystem? Explain the generic data flow from a smart contract to an oracle.

Course Outcome 6 (CO6):

1. Develop a smart contract for voting process. In this application, delegated voting is allowed and the counting is automatic and completely transparent at the same time.
2. Develop a smart contract for an auction process. The contract should be a blind auction where it is not possible to see the actual bid until the bidding period ends.

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY		
SECOND SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR		
Course Code BLOCKCHAIN TECHNOLOGIES		
Course Name: 25PADT231		
Max. Marks: 60		Duration: 2.5 Hours
PART A		
Answer All Questions. Each Question Carries 5 Marks		
1.	Explain how hash functions are used to build Merkle trees in blockchain.	
2.	Explain the benefits, features and limitations of blockchain.	
3.	What is the role of a Bitcoin miner? Explain the mining algorithm used in Bitcoin with the help of a flowchart.	
4.	Explain the design process of decentralized applications with diagrams.	
5.	Define block difficulty. Explain how block difficulty is adjusted in Ethereum blockchain network.	(5x5=25)
Part B		
(Answer any five questions. Each question carries 7 marks)		
6.	(a) Explain the design of SHA-256 and its compression function using a diagram.	(7)
7.	(a) Explain the concept of Gas in Ethereum. Explain how transaction cost can be calculated in an Ethereum blockchain network.	(7)

Model Question Paper			
8.	(a)	Explain consensus mechanisms used in blockchain. List out any six consensus algorithms used in the context of blockchain.	(7)
9.	(a)	Show how Practical Byzantine Fault Tolerance can achieve consensus in the presence of Byzantine faults.	(7)
10.	(a)	Illustrate how blockchain technology can be implemented in finance sector.	(7)
11.	(a)	Using Solidity language, create a simple bank contract that allows a user to deposit, withdraw and view balance.	(7)

Syllabus

Module – 1 (Fundamentals of Cryptography)

Introduction to Cryptography, Symmetric cryptography – AES. Asymmetric cryptography – RSA. Elliptic curve cryptography, Digital signatures – RSA digital signature algorithms. Secure Hash Algorithms – SHA-256. Applications of cryptographic hash functions – Merkle trees, Distributed hash tables.

Module–2(Fundamentals of Blockchain Technology)

Blockchain – Definition, architecture, elements of blockchain, benefits and limitations, types of blockchain. Consensus – definition, types, consensus in blockchain.

Decentralization – Decentralization using blockchain, Methods of decentralization, Routes to decentralization, Blockchain and full ecosystem decentralization.

Module-3(Consensus Algorithms and Bitcoin)

Consensus Algorithms, Crash fault-tolerance (CFT) algorithms – Paxos, Raft. Byzantine fault-tolerance (BFT) algorithms – Practical Byzantine Fault Tolerance (PBFT), Proof of work (PoW), Proof of stake (PoS), Types of PoS.

Bitcoin – Definition, Cryptographic keys – Private keys, public keys, addresses. Transactions – Lifecycle, coinbase transactions, transaction validation. Blockchain – The genesis block.

Mining – Tasks of miners, mining algorithm, hash rate. Wallets – Types of wallets.

Module-4(Smart Contracts and Use cases)

Smart Contracts – Definition, Smart contract templates, Oracles, Types of oracles, Deploying smart contracts. Decentralization terminology – Decentralized applications, Decentralized Autonomous Organizations.

Use cases of Blockchain technology – Government, Health care, Finance, Supply chain management.

Blockchain and allied technologies – Blockchain and Cloud Computing, Blockchain and Artificial Intelligence.

Module-5(EthereumandSolidity)

Ethereum – The Ethereum network. Components of the Ethereum ecosystem – Keys and addresses, Accounts, Transactions and messages. The Ethereum Virtual Machine, Blocks and blockchain.

The Solidity language – The layout of a Solidity source code, Structure of a smart contract, variables, data types, control structures, events, inheritance, libraries, functions, error handling.

SmartcontractsCasestudy:Voting,Auction.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT232	IMAGE AND VIDEO ANALYTICS	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: This course introduces the salient features and techniques used in soft computing. This course covers the various principles behind processing of image and video, their analytics and their applications. On completion of the course, students will be able to acquire key skills required for solving real-life problems on image and video analytics.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Interpret the mathematical principles in digital image enhancement and apply them in spatial domain and frequency domain (Cognitive knowledge level: Apply)
CO2	Apply various methods for image filtering and segmentation (Cognitive knowledge level: Apply)
CO3	Make use of various video enhancement and noise reduction techniques (Cognitive knowledge level: Apply)
CO4	Apply various feature extraction and pattern classification techniques on images. (Cognitive knowledge level: Apply)
CO5	Analyse various object detection and recognition techniques on image and video. (Cognitive knowledge level: Analyse)
CO6	Design, develop, implement and present solutions to simple real-life problems with popular open source library using image and video analytical techniques (Cognitive knowledge level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the areas as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	40
Analyse	20
Evaluate	Can be evaluated using Course based task/Seminar/Data collection and interpretation/Assignments
Create	Can be evaluated using Course based task/Seminar/Data collection and interpretation/Assignments

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluation shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- ii. Course based task/Seminar/Data collection and interpretation : 15 marks
- iii. Test paper (1 number) : 10 marks

Test papers shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Apply opening and closing operation on the image sample A given below with structuring element B

A=

B= [111]

1	0	0	0	0
0	1	0	0	0
0	0	1	0	0
0	0	0	1	0
0	0	0	0	1

2. What is Gamma correction and illustrate its need.
3. Verify whether the DFT matrix is unitary or not for $N=4$.

Course Outcome 2 (CO2)

1. Differentiate Averaging Filter and Weighted Averaging Filter, with an example.
2. Illustrate with an example that the initial threshold in the basic global thresholding algorithm should lie between minimum and maximum values in the image.
3. Illustrate Unsharp Masking and High Boost Filtering.

Course Outcome 3 (CO3):

1. For the same line number per frame, what is the relation between the maximum temporal frequency that a progressive raster can have and that of an interlaced raster which divides each frame into two fields? Also, give the relation between the maximum vertical frequencies.
2. Compare and contrast the features of component and composite format?
3. Illustrate the Video Production, Transmission, and Reception in an Analog Color TV systems, with a block diagram.

Course Outcome 4 (CO4):

1. Illustrate solving the face recognition problem using k-NN classifier.
2. Illustrate the steps in rule-based image understanding, with an example.
3. Give case studies on the applications of Content Based Image Retrieval (CBIR).

Course Outcome 5 (CO5):

1. Illustrate texture-based object recognition performed?
1. Illustrate the Exhaustive Search Block Matching Algorithm (EBMA) with an example.

CourseOutcome6(CO6):

1. Prepareareviewarticlebasedonpeerreviewedoriginalpublications(referringminimum 10 publications) about the recent image noise filtering techniques.
2. CourseprojecttodesignanddevelopaBirdsSpeciesClassificationSystemusingSupport Vector Machine Classifier.

3.	DifferentiateProgressiveandInterlacedscaninrastersystems.	
4.	WhatistheroleofPCAINapatternrecognitionproblem?	
5.	Comparepixelbasedandblockbased2Dmotionrepresentationmethods.	(5x5=25)
PartB		
(Answeranyfivequestions.Eachquestioncarries7marks)		

6.	(a)	Find the 4 order Hadamard Transform for the following image segment: 1 1 2 2 2 1 1 3 3 2 1 2 1 2 2 3	(4)
	(b)	Demonstrate the steps of generating digital images from the sensed data. Find out the number of bits needed to represent 512 Gray levels.	(3)
7.	(a)	Derive two point DFT.	(4)
	(b)	Illustrate the significance of negative and logarithmic transformations.	(3)
8.	(a)	For the image given below, apply histogram equalization to achieve image enhancement. $f(x,y)=$ 4 4 4 3 4 3 4 5 4 3 3 5 5 5 3 3 4 5 3 3 4 4 4 4 4	(4)
	(b)	What are the various smoothing non-linear filters in the spatial domain? Which is the best among them and why?	(3)

9.	(a)	a) For the image given below, apply Prewitt filter both in X and Y direction and find the resultant image. Also, find the magnitude and angle of gradient at the two underlined pixel positions. $f(x,y) = \begin{matrix} & 2 & 0 & 1 & 3 & 2 \\ & & & & & \\ 1 & \underline{4} & 7 & 0 & 3 & \\ & & & & & \\ 5 & 4 & \underline{3} & 5 & 7 & \\ & & & & & \\ 1 & 2 & 0 & 4 & 4 & \end{matrix}$	(4)
		Illustrate how sharpening can be done in the frequency domain using Butterworth high-pass filters.	(3)
10.	(a)	Illustrate the process for forming a composite color video signal. How should you select the color sub-carrier frequency and audio sub-carrier frequency ?	(4)
	(b)	What is the perceived color if you mix red, green, and blue in unequal proportion? What is the result if you mix red and green only ?	(3)
11.	(a)	Illustrate the steps of Support Vector Machines in solving a two-class object recognition problem.	(5)
		Compare the features of SIFT and SURF feature extraction techniques	(2)
12.	(a)	Illustrate the main steps in Automatic Traffic Monitoring system using object detection and recognition techniques.	(4)
		How is Pixel-Based Motion Estimation performed using Multipoint Neighborhood?	(3)

	Syllabus	
Module	Content	Hours
I	Fundamentals of Image Processing & Image Enhancement: Steps in Image Processing Systems, Digital image representation-, Sampling and Quantization, Pixel Relationships, Image Operations – Arithmetic, Geometric & Morphological operations, Colour Models, Image Enhancement in Spatial Domain – Transformations – Negative, Logarithmic, Gamma, Contrast Stretching, Grey level & Bit Plane Slicing. Image Transforms - DFT, DCT, Hadamard Transforms	7
II	Histogram Processing, Filtering: Histogram Processing- Histogram Equalisation. Spatial correlation and convolution, Spatial filtering- Smoothing and Sharpening spatial filters, Basics of filtering in frequency domain- Smoothing and sharpening in frequency domain. Image Segmentation- Fundamentals, Thresholding. Edge Detection- Point, Line and Edge Detection, Edge Detection operators.	7
III	Video Processing : Video Formation, Perception and Representation: Color Perception and Specification- Human Perception of Color, The Trichromatic Theory of Color Mixture, Color Specification by Tristimulus Values, Color Specification by Luminance and Chrominance Attributes. Video Capture and Display- Principles of Color Video Imaging, Video Cameras, Video Display, Composite versus Component Video, Gamma Correction, Analog Video Raster- Progressive and Interlaced Scan, Characterization of a Video Raster. Analog Color Television Systems- Spatial and Temporal Resolution, Color Coordinate, Signal Bandwidth, Multiplexing of Luminance, Chrominance, and Audio, Analog Video Recording. Digital video- ITU-R BT.601 Digital Video, Other Digital Video Formats and Applications.	8
IV	Image Analytics : Feature Extraction - Binary object feature, Histogram based (Statistical) Features, PCA - SIFT – SURF. Visual Pattern Recognition- Patterns and Pattern Classes- Statistical Pattern Classification Techniques- k-Nearest Neighbours Classifier, Support Vector Machines. Image Understanding, Content Based Image	7

	Retrieval.	
V	VideoAnalytics&ImageandVideoAnalyticsApplications:Object detection and recognition in video-Texture models, Video classification models- Object tracking in Video – Applications.. Two Dimensional Motion Estimation: Pixel Based Motion Estimation-BlockMatchingAlgorithm.Implementationexamplesofsimple Image and Video processing problems using TensorFlow and Keras. Case Study : Face Detection and Recognition, Automatic Traffic Monitoring.	7

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT233	INTERNET OF THINGS	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: This course intends to provide insight into new innovation that will build novel type of interactions among things and humans, and enables the realization of smart cities, infrastructures, and services for enhancing the quality of life and utilization of resources. Knowledge about IOT and its related concepts, different IOT architectures and their components, emerging paradigms such as Fog computing, Platforms and solutions supporting development and deployment of IOT applications, message passing mechanisms such as RPC, REST, and CoAP, data and knowledge management, data confidentiality, data integrity, and operation control issues faced by IOT are included in the course. This course helps the students to develop IOT based applications.

Course Outcomes: After the completion of the course the student will be able to

CO1	Make use of the concepts and features of the IOT paradigm. (Cognitive Knowledge Level: Comprehension)
CO2	Analyse Fog computing, TinyOS, nesC and programming frameworks for IOT (Cognitive Knowledge Level: Analyse)
CO3	Analyse the data management techniques applied to the IOT environment. (Cognitive Knowledge Level: Analyse)
CO4	Analyse security, and privacy in IOT environments. (Cognitive Knowledge Level: Apply)
CO5	Analyse key enablers and solutions to enable practical IoT systems. (Cognitive Knowledge Level: Apply)
CO6	Design of micro projects for Smart Gas Leakage Detector/Night Patrol at home (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

COMPUTER SCIENCE AND ENGINEERING- CS2

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	50%
Analyse	50%

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

- i. Preparing a review article based on peer-reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- ii. Course based task/Seminar/Data collection and interpretation : 15 marks
- iii. Test paper (1 number) : 10 marks

Test papers shall include minimum 80% of the syllabus.

Course based paper questions shall be useful in testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. —IOT is the framework that enables collaboration between smart mobile devices and cloud. Justify.

2, Explain the state diagram of the open IOT services life cycle with a case study.

Course Outcome 2 (CO2)

1. Justify the need on the four broad requirements that motivate the design of TinyOS.

Course Outcome 3 (CO3):

1. Compare Stream Management System (DSMS) and Complex Event Processing (CEP).

Course Outcome 4 (CO4):

1. Illustrate the error detection techniques which are applicable in an IoT environment.

Course Outcome 5 (CO5):

1. What is TWI? How to configure the TWI for I2C communication?

Model Question Paper		: COMPUTER SCIENCE AND ENGINEERING-CS2	
QPCODE:			
Reg No: _____			
Name: _____		PAGES: 4	
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY			
SECOND SEMESTER, TECH DEGREE EXAMINATION, MONTH & YEAR			
Course Code: 25PADT233			
Course Name: INTERNET OF THINGS			
Max. Marks: 60		Duration: 2.5 Hours	
PART A			
Answer All Questions. Each Question Carries 5 Marks			
1.	—IoT is the framework that enables collaboration between smart mobile devices and cloud. Justify.		
2.	Explain the major challenges faced in the Fog paradigm.		
3.	How are anomaly detection and categorization of anomalies in data performed?		
4.	Discuss the advantages of obfuscation and diversification techniques.		
5.	What is TWI? How to configure the TWI for I2C communication?		(5x5=25)
Part B			
(Answer any five questions. Each question carries 7 marks)			
6.		Explain the stated diagram of the open IoT services lifecycle.	(7)
7.	(a)	Justify the need on the four broad requirements that motivate the design of TinyOS.	(4)
	(b)	Explain the design decisions for nesC.	(3)
8.		Compare Stream Management System (DSMS) and Complex Event Processing (CEP).	(7)
9.		Explain the error detection techniques which are applicable in an IoT environment.	(7)

Model Question Paper		: COMPUTER SCIENCE AND ENGINEERING-CS2
10.		Develop the Station-to-Station protocol (STS) and identify the two main shortcomings of STS. (7)
11.		Suggest the sensors required to build the environmental-sensing IoT gateway device for weather monitoring. (7)
12.		Develop the steps for the development of a sensor project. (7)

Module 1: Introduction (9 Hours) Overview of Internet of Things: Open-source semantic web infrastructure for managing IOT resources in the Cloud-Device/Cloud Collaboration framework for intelligence applications.
Module 2: Programming frameworks (11 Hours) Introduction to Fog Computing: principles, architectures, and applications. TinyOS–NesC, Programming frameworks for Internet of Things
Module 3: Data management techniques (8 Hours) Stream processing in IoT: foundations, state-of-the-art, and future directions - A framework for distributed data analysis for IoT
Module 4: Security and privacy (9 Hours) Security and privacy in the Internet of Things - Internet of Things - robustness and reliability. TinyTO: two-way authentication for constrained devices in the Internet of Things - Obfuscation and diversification for securing the Internet of Things
Module 5: IoT Implementation (8 Hours) Creating a simple IoT project - Preparing Raspberry Pi – Interfacing the hardware - Internal representation of sensor values - Persisting data - Creating the actuator project - Creating a controller.

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADT234	STATISTICAL NLP	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: This course helps to familiarize with the basics of statistical techniques for processing human languages and large text corpora. It covers Word Sense Disambiguation, Part-of-Speech Tagging, Machine Translation etc. At the end of the course, the learner will be able to develop natural language-based applications and frameworks.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Apply the concepts of Probability theory and linguistic essentials for processing large text corpora. (Cognitive Knowledge Level: Apply)
CO2	Apply the concepts of Word Sense Disambiguation for processing human languages (Cognitive Knowledge Level: Apply)
CO3	Apply the concepts of Part of speech tagging and Probabilistic Context free Grammar for processing natural languages (Cognitive Knowledge Level: Apply)
CO4	Analyse the concepts of Machine Translation for human languages (Cognitive Knowledge Level: Analyse)
CO5	Apply the concepts of Clustering and Text Categorization for natural language processing to solve real-life problems. (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Students will be able to demonstrate the following attributes after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7 Ability to develop cognitive, computational, critical thinking and engineering skills and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	40
Analyse	20
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- Preparing a review article based on peer reviewed or original publications (minimum 10 publications shall be referred): 15 marks
- Course-based task/Seminar/Data collection and interpretation : 15 marks
- Test paper (1 number) : 10 marks

Test papers shall include minimum 80% of the syllabus.

:COMPUTERSCIENCEANDENGINEERING-CS2

Course-based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. It is determined that in a text 25 of every 100 verbs and 600 of every 1,000 nouns are inflected. If the number of nouns on a particular page is four times more than that of verbs, calculate the probability of
 - a. A word without inflection being randomly selected.
 - b. A noun with inflection being randomly selected.
 - c. A verb without inflection is randomly selected.
2. Analyse the different issues involved in processing a corpus? Describe to resolve them.

:COMPUTERSCIENCEANDENGINEERING-CS2

CourseOutcome2(CO2)

1. Construct phrase structure grammar of the following sentences.
 - a) I prefer morning flight.
 - b) Show me the last flight to leave.
2. Explain an algorithm for disambiguation and implement the partition based on the given data.

Translation $\{t_1, \dots, t_m\} : \{take, make, rise, speak\}$ Indicators $\{x_1, \dots, x_n\} : \{measure, note, example, decision, parole\}$

CourseOutcome3(CO3):

1. Is it possible to use HMM for POS tagging? Justify your answer.
2. Illustrate the tagging and partial parsing in question-answering system with appropriate examples.

CourseOutcome4(CO4):

1. Describe the noisy channel model in machine translation.
2. Compare and contrast different machine translation strategies.

CourseOutcome5(CO5):

1. When is the maximum entropy framework appropriate as a classification method?
2. Illustrate how the Vector Space model helps in ad-hoc retrieval?

Model Question Paper		: COMPUTER SCIENCE AND ENGINEERING-CS2
QPCODE:		
Reg No: _____		
Name: _____		PAGES:4
APJABDULKALAM TECHNOLOGICAL UNIVERSITY		
SECOND SEMESTER.M.TECH DEGREE EXAMINATION, MONTH & YEAR		
Course Code: ... 25PADT234		
Course Name: STATISTICAL NLP		
Max.Marks:60	Hours	Duration:2.5
PART A		
Answer All Questions. Each Question Carries 5 Marks		
1.	Discuss the problem of word sense disambiguation as a noisy channel model	
2.	Explain Witten-Bells smoothing.	
3.	Illustrate the usage of Penn Treebank in Probabilistic Parsing?	
4.	Compare syntactic and semantic transfer approaches for machine translation.	
5.	Describe the advantages and disadvantages of Latent Semantic Indexing.	(5x5=25)
Part B		
(Answer any five questions. Each question carries 7 marks)		
6.	(a) A text contains 10 nouns and 5 verbs. A word is selected and replaced by the other category and then a second word is selected. Calculate : 1. The probability that the second word is a verb. 2. The probability that both words selected belong to the same category. 3. The probability that both words selected are of different category.	(4)
	(b) Compute the t -value of words <i>new companies</i> in a corpus with following counts $C(\text{new})=30,000$, $C(\text{companies})=9,000$, $C(\text{new companies})=20$ and corpus size $N=15,000,000$	(3)
7.	(a) What are the limitations of Maximum Likelihood Estimation (MLE)? Give solutions to overcome these limitations.	(4)

	(b)	Explain Dictionary-Based Disambiguation with example	(3)

8.		Consider a simple three-state Markov process. The weather can be described as being precipitation (rain or snow), cloudy or sunny. Given that the weather on day $t=1$ is sunny, what is the probability that the weather for the next 7 days will be—sun, sun, rain, rain, sun, clouds, sun?	G-CS2
9.		Find the probability of the string—Astronomers saw stars with ears! with the help of inside probability for the given PCFG grammar. $S \rightarrow NP VP$ (1.0) $NP \rightarrow NPPP$ (0.4) $PP \rightarrow PNP$ (1.0) $VP \rightarrow VNP$ (0.7) $VP \rightarrow VPPP$ (0.3) $NP \rightarrow saw$ (0.04) $P \rightarrow with$ (1.0) $V \rightarrow saw$ (1.0) $NP \rightarrow ears$ (0.18) $NP \rightarrow astronomers$ (0.1) $NP \rightarrow stars$ (0.18) $NP \rightarrow telescopes$ (0.1)	(7)
10		Measuring length in number of characters is preferable because the variance in number of words is greater. Do you agree that word-based length is more variable? Why?	(7)
11	(a)	Explain the following: a) Perceptrons b) KNN classification	(3)

	(b)	We have a document collection D with 5 documents. Given a query q, we know that three documents are relevant to q. A retrieval algorithm produces the ranking (of all documents in D) shown in the following table. i) Calculate precision, recall and F-Score for each document. ii) Calculate average precision. iii) Is there any breakeven point? <table><tr><th>Rank i</th><th>+/-</th><th></th><th>p(i)</th><th>r(i)</th><th>F-Score</th></tr><tr><td></td><td></td><td></td><td></td><td></td><td></td></tr><tr><td>1</td><td>+</td><td></td><td></td><td></td><td></td></tr><tr><td>2</td><td>+</td><td></td><td></td><td></td><td></td></tr><tr><td>3</td><td>-</td><td></td><td></td><td></td><td></td></tr><tr><td>4</td><td>+</td><td></td><td></td><td></td><td></td></tr><tr><td>5</td><td>-</td><td></td><td></td><td></td><td></td></tr></table>	Rank i	+/-		p(i)	r(i)	F-Score							1	+					2	+					3	-					4	+					5	-					(4)
Rank i	+/-		p(i)	r(i)	F-Score																																								
1	+																																												
2	+																																												
3	-																																												
4	+																																												
5	-																																												

Let the random variable X have three possible outcomes $\{a, b, c\}$. Consider two distributions on this random variable.

Symbol	$p(x)$	$q(x)$
a	$\frac{1}{2}$	$\frac{1}{3}$
b	$\frac{1}{4}$	$\frac{1}{3}$
c	$\frac{1}{4}$	$\frac{1}{3}$

a) Calculate $H(p), H(q)$

b) Verify that in this case $D(p||q) \neq D(q||p)$

Syllabus

	Syllabus	
Module	Content	Hours
I	Introduction-Mathematical Foundations: Elementary Probability theory- Probability spaces, Conditional probability and independence, Bayes' theorem, Random variables, Joint and conditional distributions, Bayesian statistics, Information Theory- Entropy, Joint entropy and conditional entropy, The noisy channel model, Relative entropy or Kullback-Leibler divergence, The relation to language: Cross entropy, Linguistic Essentials- Parts of Speech and Morphology, Phrase Structure, Semantics and Pragmatics, Corpus-Based Work- Corpora, tokenization, marked-up data, Zipf's laws, Collocations, Concordances	8
II	Statistical Inference: n-gram Models over Sparse Data, n-gram, Building n-gram models, Statistical Estimators, Combining Estimators, Word Sense Disambiguation- Supervised Disambiguation, Dictionary-Based Disambiguation, Lexical Acquisition	8

III	Gamma-Markov Models, Hidden Markov Models, Implementations, properties and variants, Part-of-Speech Tagging-Information Sources in Tagging, Markov Model Taggers, Hidden Markov Model Taggers, Transformation-Based Learning of Tags, Probabilistic Context free Grammar-features, Probability of a String, Problems with the Inside-Outside Algorithm	RING-CS2
IV	Probabilistic parsing-Parsing for disambiguation, Parsing models vs. language models, Tree probabilities and derivational probabilities, Phrase structure grammars and dependency grammars, Statistical Alignment -Text alignment, word alignment, Statistical Machine Translation	8
V	Clustering-Hierarchical Clustering, Non-Hierarchical Clustering, Text Categorization-Decision Trees, Maximum Entropy Modelling, Perceptrons, k- Nearest Neighbour Classification, Topics in Information Retrieval	7

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT235	KNOWLEDGE BASED SYSTEM DESIGN	PROGRAMME ELECTIVE3	3	0	0	3

Preamble: This course helps to familiarize with the architecture and design principles of knowledge-based systems. It covers Knowledge Acquisition, Knowledge Representation and the development of Knowledge-Based Systems. On successful completion of the course, the students will be able to distinguish between human and artificial experts, their problem-solving strategies, and their knowledge representation methods.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Understand the fundamentals of knowledge engineering (Cognitive Knowledge Level: Understand)
CO2	Apply the concepts of problem solving for building Expert System (Cognitive Knowledge Level: Apply)
CO3	Apply the concepts of Knowledge based system for developing applications. (Cognitive Knowledge Level: Apply)
CO4	Apply knowledge representation methods for developing Knowledge based system (Cognitive Knowledge Level: Apply)
CO5	Make use of Semantics of Expert Systems for building applications. (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the continuous improvement of the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	40
Analyse	20
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- Course based task/Seminar/Data collection and interpretation: 15 marks

iii. Testpaper(1number) : 10 marks
COMPUTERSCIENCEANDENGINEERING-CS2

Testpapershallincludeminimum80%ofthesyllabus.

Coursebasedtask/testpaperquestionsshallbeusefulinthetestingofknowledge,skills,comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions Course

Outcome 1 (CO1):

1. Describe the role of inference engine in Rule-based expert system.
2. Illustrate the difference between an expert system and a knowledge-based system?

CourseOutcome2(CO2)

1. Explain conflict resolution technique in rule-based systems.
2. Compare Hayes-Roth's and Clancey's classification of expert system

Course Outcome 3 (CO3): :COMPUTER SCIENCE AND ENGINEERING-CS2

1. Illustrate the advantages and limitations of a Knowledge-based system.
2. Describe the components of a knowledge-based system and illustrate the need of each component with an example.

Course Outcome 4 (CO4):

1. Discuss knowledge acquisition strategies in a MUD system
2. Differentiate between procedural knowledge and factual knowledge

Course Outcome 5 (CO5):

1. What makes case-based reasoning different from rule-based reasoning? Which one will be better for knowledge-based system design?
2. What are the sources of uncertain reasoning?

Model Question Paper		: COMPUTER SCIENCE AND ENGINEERING-CS2	
QPCODE:			
Reg No: _____			
Name: _____		PAGES: 4	
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY			
SECOND SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR			
Course Code: 25PADT235			
Course Name: KNOWLEDGE BASED SYSTEM DESIGN			
Max. Marks: 60		Duration: 2.5 Hours	
Answer All Questions. Each Question Carries 5 Marks			
1	How does an expert system help in solving complex problems?		
2	Why don't rule-based systems backtrack much?		
3	Why don't all expert systems use Bayes' Rule to compute the degrees of certainty associated with conclusions? Is there any other method to solve such problems?		
4	Why is Knowledge acquisition a bottleneck? What solutions have been proposed?		
5	What is a case library and how does a case differ from a book?		(5x5=25)
Part B (Answer any five questions. Each question carries 7 marks)			
6	(a)	What are the characteristics and components of an expert system?	(3)

	(b)	Differentiate ‘searchspace’ and ‘solutionspace’. What will be the searchspace and solutionspace for the game of chess?	(4)
7	(a)	How can we select a knowledge engineering tool? How hard such tools are to learn and use?	CS2(4)
	(b)	List out the classification of expert system tasks.	(3)
8.		Describe the Knowledge-Based System architecture and its working.	(7)
9.	(a)	Identify some knowledge acquisition strategies for heuristics classification.	(3)
	(b)	What all difficulties may arise in the implementation phase of building a Knowledge-Based System?	(4)
10.		When the searchspace is potentially large, which type of testing is beneficial? Explain how it works?	(7)
11.	(a)	Describe the working of any industrial or commercial expert systems.	(4)
	(b)	What do you mean by Knowledge acquisition? What are the stages of knowledge acquisition?	(3)
12.		What are the common pitfalls during Knowledge Based Systems implementation and how we can avoid them?	(7)

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT241	SOFT COMPUTING	PROGRAMME ELECTIVE4	3	0	0	3

Preamble: This course introduces the salient features and techniques used in soft computing. This course covers various neural network models, fuzzy systems, genetic algorithm concepts and their applications. On completion of the course, students will be able to acquire key skills required for solving real-life problems using soft computing techniques.

Course Outcomes: After the completion of the course the student will be able to

CO1	Analyse soft computing techniques and their applications (Cognitive knowledge level: Analyze)
CO2	Make use of various neural network models in problem solving (Cognitive knowledge level: Apply)
CO3	Examine various fuzzy concepts (Cognitive knowledge level: Analyze)
CO4	Illustrate use of fuzzy models in various applications (Cognitive knowledge level: Apply)
CO5	Analyse genetic algorithms and their applications (Cognitive knowledge level: Analyze)
CO6	Design, develop, implement and present solutions to simple real-life problems with popular open source library using soft computing techniques (Cognitive knowledge level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

CourseLevelAssessmentQuestions

Course Outcome 1 (CO1):

1. Comparelinearandnon-linearactivationfunctionswithanexampleforeach.
2. Showthatasinglelayerperceptroncannotsimulateasimpleexclusive-ORfunctionand give the reason.
3. Implement logical NOR function using neural network model

Course Outcome 2 (CO2)

1. Designasuitableneuralnetworkforhumanfacerecognition.
2. IllustratewithanexamplehowSupervisedLearningtechniquecanbeusedtosolvea multilabel classification problem
3. Comparesigmoidalandstepactivationfunctions.

CourseOutcome3(CO3):

1. TwofuzzysetsAandBdefinedontheEnglishalphabets(F,E,X,Y,I,T)aredefinedas below:

$$A=\{(F,0.2), (E,0.9),(X,0.4),(Y,0.3),(I,0.8),(T,0.5)\}$$

$$B=\{(F,0.4),(E,0.6), (X,0.7),(Y,0.2),(I,0.8),(T,0.6)\}$$

Findthefollowing.

i) $A \cap B$ ii) $A \cup B$ iii) Verify Demorgan's Law $(A \cup B)^c = A^c \cap B^c$

2. Consider a set $P=\{P1,P2,P3,P4\}$ of four varieties of paddy plants, set $D=\{D1,D2,D3,D4\}$ of the various diseases affecting the plants and $S=\{S1,S2,S3,S4\}$ be the common symptomsof the diseases. Let R be a relation on $P \times D$ and S be a relation on $D \times S$.

Obtaintheassociationoftheplantswiththedifferentsymptomsofthediseasesusingmax–mincomposition.

3. Fuzzybinaryrelation R is defined on set $A=\{1,2,3,4,5\}$ and $B=\{90,91,92,93,94,95\}$ and represents the relation —a is much smaller than b—. It is denoted by the membership function

{

$R(a,b) = \begin{cases} 1 - \frac{a}{b} & \text{for } a \leq b \\ 0 & \text{Otherwise} \end{cases}$:COMPUTERSCIENCEANDENGINEERING-CS2

$$1 - \frac{a}{b}$$

0 Otherwise

Where $a \in A$ and $b \in B$. Find the domain and range of R.

Course Outcome 4 (CO4):

1. Design a fuzzy controller to determine the wash time of a washing machine. Assume the input is dirt and grease. Use three descriptors for input variable and five descriptors for output variable. Derive the set of rules for controller action and defuzzification. Show that if the dirt is more, the wash time will be more and vice versa.
2. Illustrate the multi-attribute decision making with an example.
3. Demonstrate problem solving using Mamdani fuzzy model, with an example.

Course Outcome 5 (CO5):

1. Illustrate Roulette Wheel Selection technique with an example.
2. Differentiate single-point crossover, multi-point crossover and uniform crossover techniques used in Genetic Algorithm.

Course Outcome 6 (CO6):

1. Prepare a review article based on peer-reviewed or original publications (referring minimum 10 publications) about recent neuro-fuzzy systems based applications.
2. Course project to design and develop a handwritten character recognition system using Python/ TensorFlow/ Keras based on MNIST handwritten digit dataset.
3. Present a seminar on any one application of Genetic Algorithm (Other than Traveling Salesman Problem)

x_1	1	0	1	1																		
x_2	0	1	0	1																		
x_3	0	1	1	1																		
8.	(a) Let P and Q be two fuzzy relations defined on the sets $X \times Y$ and $Y \times Z$ respectively, where $X = \{x_1, x_2\}$, $Y = \{y_1, y_2, y_3\}$, and $Z = \{z_1, z_2\}$. P and Q are given using the following relation matrices. $P =$ $Q =$ $[0.5 \ 0.2 \ 0.3 \ 0.1 \ 0.7 \ 0.6]$ $[0.5 \ 0.8 \ 0.4 \ 0.6 \ 1]$ Find the association $P \circ Q$ using both max-min composition and max-product compositions	(4)																				
	(b) Differentiate Triangular and trapezoidal fuzzy membership functions.	(3)																				

9.	(a) Consider two input-one output fuzzy inference rules. Rule: 1 - IF x is A3 OR y is B1 THEN z is C1 Rule: 2 - IF x is A2 AND y is B2 THEN z is C2 Rule: 3 - IF x is A1 THEN z is C3 Assume $A3=0.2, B1=0.4, A2=0.7, B2=0.9, A1=0.3$ and the selected values of z in $C1=(0,11,21)$, $C2=(40,50,60,70)$ & $C3=(60,70,80,90)$. Find out the value of z using Mamdani fuzzy inference system.	G-CS 2
	(b) Derive the conclusion for Multiple Rules with multiple antecedents.	(2)
10.	(a) Illustrate the problem-solving method using Sugeno fuzzy system, with an example.	(4)
	(b) A fuzzy reasoning system is provided with the following facts and rules.) Premise 1 (fact): x is A' and y is B') Premise 2 (Rule 1): if x is A and y is B, then z is C. Demonstrate the inference procedure to find out the conclusion z is C'	(3)
11.	(a) Calculate the output of the neuron for the following network using Binary Sigmoidal activation function. 	(4)
	(b) Implement logical AND function using neural networks.	(3)
12.	(a) A salesman has to follow the shortest route to visit N cities exactly once and reach the starting city. Apply genetic algorithm to solve this problem.	(4)
	(b) Illustrate Tournament Selection in Genetic Algorithm with an example.	(3)

Syllabus
:COMPUTERSCIENCEANDENGINEERING-CS2

Module1-Introduction

Soft Computing Constituents, Computational Intelligence and Soft Computing vs Artificial Intelligence and Hard Computing. Introduction to artificial neural networks- biological neurons, McCulloch and Pitts model of neurons, Perceptron networks, Multilayer Perceptron. Types of activation function, network architectures, learning process, Learning XOR and other logical Gate functions, Sigmoid Neurons, Gradient Descent Algorithm, Back propagation Neural Network.

Module2-Neural Networks

Adaptive Networks, Feed Forward Networks, Supervised Learning Neural Networks, Radial Basis Function Networks, Reinforcement Learning, Unsupervised Learning Neural Networks, Adaptive Resonance Architectures, BAM, Maxnet, Kohonen Self Organizing Maps, K-means clustering algorithm, Introduction to Convolutional Neural Networks, Applications of ANNs to solve real life problems. Familiarisation of neural network tools , Building neural networks with Python, TensorFlow, Introduction to Keras.

Module 3-Fuzzy Sets & Logic

Fuzzy versus Crisp, Fuzzy sets, Membership function, linguistic variable, basic operators, properties, Extension principle and Fuzzy relations, Cartesian product, Operations on Fuzzy sets , Operations on fuzzy relations, Fuzzy Logic

Module 4-Fuzzy Reasoning

Fuzzy If-Then Rules, Fuzzy Inference Systems, Fuzzy Expert Systems, Fuzzification and Defuzzification methods, Fuzzy Decision Making , Mamdani Fuzzy Models, Sugeno Fuzzy Models, Applications of Fuzzy logic, Neuro Fuzzy Systems.

Module5-Genetic Algorithm

Introduction to genetic algorithm and hybrid systems-Genetic algorithms, natural evolution , properties, classification, GA features, coding, selection, selection methods, reproduction , cross over and mutation operators, basic GA and structure, Solving Travelling Salesman Problem using GA. Applications using GA, Hybrid Systems - GA based BPNN.

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADT242	HIGH PERFORMANCE COMPUTING	PROGRAMME ELECTIVE4	3	0	0	3

Preamble: This course helps the learners to understand the different architectural features of high-end processors. This course discusses the Basics of high-end processors Architecture, Instruction-Level Parallelism, Data-Level Parallelism, Thread Level Parallelism, and GPU Architectures. This course enables the students to provide solutions to real-world problems making use of the capabilities of HPC systems.

CourseOutcomes:Afterthecompletionofthecoursethestudentwillbeableto

CO1	Analysedifferenttypesofmodernprocessingenvironmentsandparallelcomputing hardware(CognitiveKnowledgeLevel:Analyse)
CO2	SummarizetheconceptsofInstructionLevelParallelism(CognitiveKnowledge Level:Analyse)
CO3	AppreciatetheideaofDataLevelParallelism(CognitiveKnowledgeLevel: Apply)
CO4	DemonstratetheconceptofThreadLevelParallelism(CognitiveKnowledgeLevel: Apply)

ProgramOutcomes(PO)

Outcomesaretheattributeshataretobedemonstratedbyagraduateaftercompletingthe course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3:Anabilitytodemonstrateadegreeofmasteryovertheareaasperthespecializationof the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4:Anabilitytoapplystreamknowledgetodesignordevelopsolutionsforrealworld problems by following the standards

PO5:Anabilitytoidentify,selectandapplyappropriatetechniques,resourcesandstate-of- the-art tool to model, analyse and solve practical engineering problems.

:COMPUTERSCIENCEANDENGINEERING-CS2

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	40
Analyse	20
Evaluate	-
Create	-

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design based questions (for both internal and end semester examinations).

Continuous Internal Evaluation: 40 marks

- Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- Course based task/Seminar/Data collection and interpretation : 15 marks

:COMPUTERSCIENCEANDENGINEERING-CS2

iii. Testpaper (1number)

:10marks

Testpapershallincludeminimum80%ofthesyllabus.

Coursebasedtask/test paperquestionsshallbeusefulinthetestingofknowledge,skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions

CourseOutcome1(CO1):

1. Differentiated different classes of computer-based on features like microprocessor cost, system cost, and system design issues.
2. Explain the different methods by which computer hardware exploits application-level parallelism.
3. Explain in detail the instruction set architecture
4. Describe the encoding scheme specified as part of ISA

Course Outcome 2 (CO2):

1. Differentiated data, name, and control dependencies with suitable examples.
2. Explain loop unrolling with suitable coding demonstration

3. Explain in detail about Tournament Predictors.
4. Describe the unique features of very long instruction word processors.

Course Outcome 3(CO3):

1. What are the three things conveyed through a data dependence? Explain the Data Dependencies of the following code:

```
f0,0(x1) //f0=array element
fadd.d f4,f0,f2 //add scalar in f2
fsd f4,0(x1) //store result
addi x1,x1,-8 //decrement pointer 8 bytes
bne x1,x2,Loop //branch x1≠x2
```

2. Assume a single-issue pipeline. Unroll the loop as many times as necessary to schedule it without any stalls, collapsing the loop overhead instructions. How many times must the loop be unrolled? Show the instruction schedule. What is the execution time per element of the result?
3. Explain the SIMD Instruction Set Extensions for Multimedia.

Course Outcome 4(CO4):

1. With the help of a neat diagram illustrate a single-chip multicore with a distributed cache.
2. Demonstrate the Implementation of cache coherence in a distributed-memory multiprocessor by adding a directory to each node with a suitable diagram.
3. Consider the following code segments running on two processors P1 and P2. Assume A, and B, are initially 0. Explain how an optimizing compiler might make it impossible for B to be ever set to 2 in a sequentially consistent execution model.

P1:	P2:
A=1;	B=1;
A=2;	While (A <> 1);
While (B == 0);	B=2;

Course Outcome 5(CO5):

1. Explain the benefits of potential GPU.
2. Illustrate GPU system as an accelerated computational platform.
3. Discuss CPU to GPU data transfer overhead.

APJABDULKALAMTECHNOLOGICALUNIVERSITY		
SECONDSEMESTER.TECHDEGREEEXAMINATION,MONTH&YEAR		
CourseCode: 25PADT242		
CourseName:HighPerformanceComputing		
Max.Marks:60		Duration:2.5Hours
PARTA		
AnswerAllQuestions.EachQuestionCarries5Marks		
1.	Discuss in detail the importance of considering processor performance for the design of an efficient computer system.	
2.	Illustrate how data-level parallelism is achieved in vector, and SIMD architectures.	
3.	Consider the following loop: <pre> for (i=0; i < 100; i++) { A[i] = A[i] + B[i]; /* S1 */ B[i+1] = C[i] + D[i]; /* S2 */ } </pre> Are there exist dependencies between S1 and S2? Determine whether the above loop is parallel? If not, show how to make it parallel.	
4.	Suppose an application running on a 100-processor multiprocessor use 1, 50, or 100 processors. If for 95% of the time all 100 processors are used, illustrate how the remaining 5% of the execution time employs 50 processors for a speedup of 80?	
5.	Explain about GPU thread engine.	(5x5=25)
PartB		
(Answer any five questions. Each question carries 7 marks)		
6.	(a) Illustrate how processes are protected with the help of virtual memory.	(4)
	(b) Describe the quantitative principle of computer design with Amdahl's law.	(3)
7.	(a) Explain in detail data dependence and hazards.	(7)

Model Question Paper			
	(b)		
8.	(a)	Describe the unique features of very long instruction word processors.	(3)
	(b)	Consider a three-way superscalar machine renaming these three instructions concurrently: <pre>addi x1, x1, x1 addi x1, x1, x1 addi x1, x1, x1</pre> If the value of x1 starts at 5, then what will be its value when after this sequence is executed?	4
9.	(a)	The following loop has multiple types of dependences. Find all the true dependences, output dependencies, and anti-dependencies, and eliminate the output dependencies and anti-dependencies by renaming. <pre>for (i=0; i<100; i=i+1) { Y[i] = X[i] / c; /* S1 */ X[i] = X[i] + c; /* S2 */ Z[i] = Y[i] + c; /* S3 */ Y[i] = c - Y[i]; /* S4 */ }</pre>	(7)
10	(a)	Demonstrate the different types of hardware approaches required for the working of multithreading.	(7)
11	(a)	Consider an 8-processor multicore where each processor has its own L1 and L2 caches. Here snooping is performed on a shared bus among the L2 caches. Assume that the average L2 request is 15 cycles for a coherence miss or other miss and a clock rate of 3.0 GHz, a CPI of 0.7, and a load/store frequency of 40%. If the goal set is that no more than 50% of the L2 bandwidth is consumed by coherence traffic, then what is the maximum coherence miss rate per processor?	(7)
12	(a)	Explain the multi-GPU platform.	(7)

:COMPUTERSCIENCEANDENGINEERING-CS2

Syllabus

Module-1(BasicsofArchitecture)

ClassesofComputers-ClassesofParallelismandParallelArchitectures–Defining Computer Architecture– Dependability – Quantitative Principles of Computer Design –Basics of Memory Hierarchies – Virtual Memory and Virtual Machines – Pipelining

Module-2(Instruction-LevelParallelism)

Instruction-Level Parallelism: Concepts and Challenges – Basic Compiler Techniques for Exposing ILP – Reducing Branch Costs With Advanced Branch Prediction – Hardware-Based Speculation – Multithreading: Exploiting Thread-Level Parallelism to Improve Uniprocessor Throughput

Module-3(Data-LevelParallelism)

VectorArchitecture–SIMDInstructionSetExtensionsforMultimedia–Graphics Processing Units – Detecting and Enhancing Loop-Level Parallelism

Module-4(ThreadLevelParallelism)

MultiprocessorArchitecture:IssuesandApproach–CentralizedShared-Memory Architectures – Performance of Symmetric Shared-Memory Multiprocessors– Distributed Shared-MemoryandDirectory-BasedCoherence–Synchronization:TheBasics– Introduction to Memory Consistency

Module-5(GPUArchitectures)

The CPU-GPU system as an accelerated computational platform – The GPU and the thread engine – Characteristics of GPU memory spaces – The PCI bus: CPU to GPU data transfer overhead – Multi-GPU platforms– Potential benefits of GPU – accelerated platforms

CODE	COURSE NAME	CATEGORY PROGRAMME	L	T	P	CREDIT
25PADT243	CRYPTOGRAPHY AND NETWORK SECURITY	ELECTIVE4	3	0	0	3

Preamble: The course introduces the fundamental concepts of cryptography and the security issues. It covers basic symmetric and asymmetric cryptographic algorithms, cryptographic hash functions, message authentication protocols, digital signatures, key management and distribution schemes for symmetric and asymmetric encryption, and case studies involving different types of attacks and conventional algorithms. The course enables learners to apply the cryptographic concepts to real-life problems.

Course Outcomes: After the completion of the course, the student will be able to

CO1	Summarize basic cryptographic algorithms and security issues. (Cognitive Knowledge Level: Apply)
CO2	Compare and analyze various symmetric and asymmetric key cryptographic algorithms. (Cognitive Knowledge Level: Apply)
CO3	Demonstrate cryptographic hash functions and digital signatures schemes. (Cognitive Knowledge Level: Apply)
CO4	Summarize key management and distribution schemes for symmetric and asymmetric encryption. (Cognitive Knowledge Level: Apply)
CO5	Apply the concepts to design an efficient cryptographic algorithm, hash function and digital signatures scheme. (Cognitive Knowledge Level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams.

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.

PO4: An ability to apply stream knowledge to design or develop solutions for real-world problems by following the standards.

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

COMPUTER SCIENCE AND ENGINEERING - C.S.E-2
 PO6: An ability to engage in life-long learning for the design and development related to the course related problems taking into consideration sustainability, societal, ethical and environmental aspects.

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

CourseLevelAssessmentQuestions Course

Outcome 1 (CO1):

1. UseVigenereCipherwithkeyHEALTHtoencryptthemessage—Cryptographyand networksecurityl.

2. In a public key system using RSA, you intercept the ciphertext $C = 8$ sent to a user whose public key is $e = 13, n = 33$. What is the plaintext M ?
3. Alice wants to send a message to Bob, without Eve observing it. Alice and Bob have agreed to use a symmetric cipher. Key exchange has already occurred, and so they share a key K . Outline the steps that Alice and Bob must follow when they encrypt and decrypt, respectively.

Course Outcome 2 (CO2)

1. With the help of an example, illustrate the concept behind ElGamal Crypto System.

Elaborate on an application which uses Chinese Remainder Theorem.

3. Consider a Diffie-Hellman scheme with a common prime $q = 11$ and primitive root $\alpha = 2$.
 - i. Show that 2 is a primitive root of 11.
 - ii. If user A has public key $Y_A = 9$, what is A's private key?
 - iii. If user B has public key $Y_B = 3$, what is the shared secret key K , shared with

Course Outcome 3 (CO3):

1. Discuss on an attack to which MAC is vulnerable. How can MAC be made more secure?
2. Imagine that a specific hash function is used for HMAC, and that vulnerabilities have been found in the hash functions so that the HMAC is insecure. Which changes in the HMAC are required in order to make it secure again?
3. The Diffie-Hellman key agreement algorithm achieves key agreement by allowing two hosts to create a shared secret.
 - a. Clearly explain the operation of the Diffie-Hellman key exchange protocol.
 - b. Clearly explain why the basic Diffie-Hellman protocol does not provide any assurance regarding which other party the protocol is run with.

Course Outcome 4 (CO4):

1. Explain the authentication procedures defined by X.509 certificate.
2. Illustrate the concept of 'certificate chain' for verification of digital signature on X.509 certificate.
3. Describe the steps in finding the message digest using SHA-512 algorithm. Analyse the situation where two messages have the same message digest.

Course Outcome 5 (CO4):

1. Prepare a report on various symmetric and asymmetric key cryptosystems. Compare features of both the systems based on their applications.
2. Present a seminar on different message authentication protocols and digital signature

3. Course project to design a private or public cryptosystem/message authentication protocol or digital signature scheme.

Model Question Paper		
QPCODE:		
Reg No: _____		
Name: _____ PAGES:4		
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY		
SECOND SEMESTER.TECH DEGREE EXAMINATION, MONTH & YEAR		
Course Code: 25PADT243		
Course Name: CRYPTOGRAPHY AND NETWORK SECURITY		
Max.Marks:60 Duration:2.5Hours		
PART A		
Answer All Questions. Each Question Carries 5 Marks		
1.	Encrypt the message —the movie is set to release this Friday using Vigenere cipher with key—awards . Ignore the space between words. Decrypt the message to get the plain text.	
2.	Alice and Bob agreed to use RSA algorithm for the secret communication. Alice securely choose two primes, $p=5$ and $q=11$ and a secret key $d=7$. Find the corresponding public key. Bob use this public key and sends a ciphertext 18 to Alice. Find the plain text.	
3.	Compare digital signatures with authentication protocols.	

4.	COMPUTER SCIENCE AND ENGINEERING	Explain why message authentication alone is insufficient as proof of message origin in general, and to settle disputes about whether messages have been sent.	G-CS2
5.		Quoting suitable examples, differentiate between IP spoofing attacks and denial of service attacks.	(5x5=25)
Part B (Answer any five questions. Each question carries 7 marks)			
6.		The encryption key in a transposition cipher is (3,1,4,5,2). Perform encryption and decryption for the message —meet me after the toga party . Add a bogus character at the end to make the last group the same size as the others.	(7)
7.		Elaborate on the algorithm for generating keys in RSA algorithm. Perform encryption and decryption using RSA for the following. P=7; q=11; e=13; M=8.	(7)

8.		Illustrate a man-in-the-middle attack on Diffie-Hellman key exchange algorithm.	(7)
9.		Alice wants to send a message M with a digital signature Sig(M) to Bob. Alice and Bob have an authentic copy of each other's public keys, and have agreed on using a specific hash function h. Outline the steps that Alice must follow when signing M, and the steps that recipient Bob must follow for validating the signature Sig(M).	(7)
10.		Alice wants to send a message to Bob. Alice wants Bob to be able to ensure that the message did not change in transit. Briefly outline the cryptographic steps that Alice and Bob must follow to ensure the integrity of the message by creating and verifying a MAC.	(7)
11.		Explain Kerberos authentication mechanism with a suitable diagram.	(7)
12.		With the help of an example, illustrate IP spoofing attacks.	(7)

	Syllabus	
Module	Content	Hours
I	Security Concepts - Introduction, The need for security, Security approaches, Principles of security, Types of Security attacks. Services and Mechanism, A model for Network Security. Cryptography Concepts and Techniques: Introduction, plaintext and cipher text, substitution techniques, transposition techniques, encryption and decryption, symmetric and asymmetric key cryptography, steganography, key range and key size, possible types of attacks.	9
II	Symmetric Key Cryptography-Block Cipher principles, DES, AES, Blowfish, RC5, IDEA, Block cipher operation, Stream ciphers, RC4. Asymmetric Key Cryptography - Principles of public key cryptosystems, RSA algorithm, Elgamal Cryptography, Diffie-Hellman Key Exchange, Knapsack Algorithm.	11
III	Cryptographic Hash Functions-Message Authentication, Secure Hash Algorithm (SHA-512), Message authentication codes: Authentication requirements, HMAC, CMAC, Digital signatures, Elgamal Digital Signature Scheme.	7
IV	Key Management and Distribution - Symmetric Key Distribution Using Symmetric & Asymmetric Encryption, Distribution of Public Keys, Kerberos, X.509 Authentication Service, Public – Key Infrastructure.	6

V	Case Studies of Cryptography- Denial of service attacks, IP spoofing attacks, Secure inter branch payment transactions, Conventional Encryption and Message Confidentiality, Conventional Encryption Principles, Conventional Encryption Algorithms, Location of Encryption Devices, Key Distribution.	7

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT244	BIG DATA ANALYTICS ON GENOMIC DATA	PROGRAMME ELECTIVE4	3	0	0	3

Preamble: This course helps the learners to provide practical/research solutions to problems in the domain of Bioinformatics. It enables the learner to understand concepts of Bioinformatics, Application of AI in Bioinformatics, Big Data Bioinformatics and Data Analytics with NGS data. This course helps the learners to develop practical solutions to problems in bioinformatics.

Course Outcomes: The COs shown are only indicative. For each course, there can be 4 to 6 COs.

After the completion of the course, the student will be able to

CO1	Analyse basic concepts of Biomolecules, Biological databases, Sequence characteristics (Cognitive Knowledge Level :Apply)
CO2	Apply ML/DL Model for RNA /Protein structure Analysis (Cognitive Knowledge Level :Apply)
CO3	Apply Big data techniques in Bioinformatics (Cognitive Knowledge Level :Apply)
CO4	Comprehend the Data Analytics pipelines for NGS data (Cognitive Knowledge Level :Apply)
CO5	Design and Develop RNASeq/Chip/Metagenomics seq Pipelines (Cognitive Knowledge Level :Apply)
CO6	Develop/suggest a solution for any research problems in the field of Bioinformatics (Cognitive Knowledge Level :Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be commensurate with the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions:COMPUTERSCIENCEANDENGINEERING-CS2

CourseOutcome1(CO1):

1. ComprehendthenatureandscopeofBioinformatics
2. Articulatethedifferentbiomoleculesandthevariousdatabases
3. Comprehend the concept of sequence Alignments

Course Outcome 2 (CO2)

1ComprehendandapplyML/DLmodelsforBioinformaticsdata

2. ApplyLSTM/GANmodels
3. Comprehend Transformer based architecture

Course Outcome 3(CO3):

1. ComprehendtheBigdataconcept,challengesandthevarioustechniquesinit.
2. ApplyandAnalyseMapReduceconceptwithHadoopandSpark
3. Apply Spark SQL for scaling genomic data

Course Outcome 4 (CO4):

1. ComprehendtheunderstandingofNGSpipelines
2. ArticulateonDenovoassemblies

Course Outcome 5 (CO5):

1. DemonstrateUnderstandingofRNASeq/ChipseqPipelines
2. ApplytheprincipleofQIIME

Model Question Paper	
QPCODE:	
Reg No: _____	
Name: _____ PAGES:4	
APJABDULKALAMTECHNOLOGICALUNIVERSITY	
SECONDSEMESTER.TECHDEGREEEXAMINATION,MONTH&YEAR	
CourseCode: 25PADT244	
CourseName:BIGDATAANALYTICSONGENOMICDATA	
Max.Marks:60	Duration:2.5Hours
PART A	
Answer All Questions. Each Question Carries 5 Marks	
1.	(i) Study the cartoon and comment on the heritable trait that is transmitted from parent to offspring  (ii) A structural gene has two DNA strands and for the partial sequence of the gene given below, which is the template strand and why? 5'ACTCGATGCTAG3' 3'TGAGCTACGATC5'

2.	Bioinformatics is the application of computational technology to handle the rapidly growing repository of information related to molecular biology. Give a brief insight based on your knowledge on this definition of bioinformatics	
3.	Write short note on the need and application of Biological databases in sequence analysis :COMPUTER SCIENCE AND ENGINEERING	G-CS2
4.	Write a Python program using Pyspark to perform the following task. - Create a dataframe with the following attributes studentid, name, Marks - Find the scholars whose mark < 50% using spark sql comment - Find the average and variance of the marks - Find the maximum and minimum marks	
5.	Discuss the steps involved in the Metagenomics data analysis pipeline.	(5x5=25)
Part B (Answer any five questions. Each question carries 7 marks)		
6.	(a) For the given RNA molecule secondary structure, identify the (i) Stem (ii) Loop and explain the importance of stem-loop structure of RNA. 	3 marks
	(b) The protein synthesis process is shown below. Identify the different stages and explain the role of mRNA? 	4 marks

7.	(a)	How do you submit biological data to a public database? List the major submission tools in NCBI.	3 marks

	(b)	From NCBI, while downloading a gene sequence, you can download the sequence in two formats- GenBank & FASTA. About the sequence, which format will be useful? Justify your answer. 	4marks G-CS2
8.	(a)	Align AGCTCAG with AGGTCAB using a suitable scoring scheme	5marks
	(b)	Differentiate between Pairwise and Multiple sequence alignment.	2marks
9.	(a)	Write a simple python program for illustrating the map reduce model used in Hadoop?	4marks
		Explain with examples the PageRank algorithm using MapReduce programming concept	3marks
10	(a)	Study the pictorial representation given below. Comment on the unknown block and its relevance in machine learning 	3marks
	(b)	Explain architecture of CNN. Estimate the number of parameters using 2 convolution layer model	4marks
11	(a)	Briefly explain the big data challenges in the field of Bioinformatics.	3marks
	(b)	Distinguish between Bowtie and BWA.	4marks
12	(a)	What is a contig? What is a scaffold? Describe de novo assembly. Name a software used for de novo assembly.	3marks
	(b)	Briefly explain the public sequence databases which support Next generation sequencing data and the various data formats being supported	4marks

:COMPUTERSCIENCEANDENGINEERING-CS2

Syllabus

Module1:IntroductiontoBioinformatics

Informationalviewoflifesceience;IntroductiontoBiomoleculesthroughgames-Foldit (Protein overlapping), Eterna Game (RNA Structure), History of Bioinformatics, Biological databases,SequenceSimilarity,identityandhomology,ScoringMatrices,Sequence Alignment, Phylogeny

Module2:AIinBioinformatics

AI applications in the field of genomics, the role of deep learning and data mining in computational biology and bioinformatics, ML/DL algorithms: ANN, CNN, LSTM, BERT, GAN, Protein structure prediction (deep neural networks), RNA structure prediction (deep learning models), RNA-protein binding sites prediction with CNN, Deep neural net to predict targetgeneexpression,TranscriptionFactorBindingviaMLP,LSTM,CNN,Protein Contextual Embeddings via BERT

Module3BigDataBioinformatics

OverviewofBigdata,DataStorageandAnalysis,Processing-SCVprinciple,BatchVs Stream processing, Big data Analytics- Typical Analytical Architecture -Types (Descriptive, Inquisitive,Predictive,Perspective);VisualisationandApplications,Computationalfacilities for analysing Big data – Cluster computing vs. Cloud computing, – Challenges in Big Data Analytics,BigdataFrameworks-MapReduce,HadoopandSpark,SparkSQLand dataframes, Spark for Bioinformatics, Big data analytics using Python- PySpark, Big data processing for DNA sequence analysis – PASTASpark

Module4DataAnalyticswithNGSdata

Introduction to next generation sequencing: NGS Platforms, NGS, advantages, limitations and applications, NGS Data sources: NCBI SRA, EBI-ENA, DDBJ-SRA; SRA toolkit; NGS Data analysis: FASTQ files, Quality check, Pre-processing, Mapping - Principles, tools - BWA, Bowtie, SAM tools -output file formats -BAM, SAM; Denovo assemblies - Principles, tools - SOAPdenovo, Velvet; Visualization tools - IGV; Whole Genome/Exome pipeline for Variant calling - VCF files.

Module5AdvancedDataAnalyticswithNGSdata

RNAseq - Gene expression analysis, Differential expression analysis. Alternative splicing - TopHat and Cufflinks for RNAseq, ChIPseq - Introduction and biological theories on ChIPseq analysis.DNAfragmentevaluation.Peakidentification.Twoconditioncomparison. Saturationanalysis.Motiffinding andrelatedtheories,Metagenomicsanalysisusing QIIME and Picrust

Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2credit courses, the contentcanbefor26hrs.Theauditcourseinthird semestercanhave contentfor30hours).

No	COMPUTATIONAL BIOINFORMATICS AND ENGINEERING	No. of Lectures (40hrs)
1	Module 1: Introduction to Bioinformatics	
1.1	Informational view of life science; Definition; DNA-RNA and Proteins as information, Primary and secondary structure of DNA,	1
1.2	Chargaff's Rules, Different forms of DNA, RNA, Introduction to Biomolecules through games-Foldit (Protein overlapping), Eterna Game (RNA Structure)	1
1.3	History of Bioinformatics, Definition of Bioinformatics, Bioinformatics versus Computational Biology, Goals of Bioinformatics analysis,	1
1.4	Biological databases: -File format, conversion of file format, Data retrieval system, Genome browsers. Biological data file formats	1
1.5	Basic concepts of sequence similarity, identity and homology, Scoring matrices- PAM and BLOSUM matrices,	
1.6	Data retrieval system, Sequenced databases-EMBL, GenBank, DDBJ;	
1.7	Protein databases-UniProt, Protein Data Bank.	
1.8	Concept of sequence alignment-pairwise and multiple Pairwise-Local and global, ,	1
1.9	Dotplot, BLAST, Multiple sequence alignment (MSA)-CLUSTAL Omega	
1.10	Phylogeny: Basic concepts of phylogeny, Phylogenetic tree construction using MEGA.	1
2	Module 2: AI in Bioinformatics	
2.1	AI applications in the field of genomics, the role of deep learning and data mining in computational biology and bioinformatics.	1
2.2	ML/DL algorithms: ANN, CNN, LSTM,	1
2.3	ML/DL algorithms: BERT, GAN	1
2.4	ML model for protein expression/Sequence classification,	1
2.5	Protein structure prediction (deep neural networks), RNA structure prediction (deep learning models),	1
2.6	RNA-protein binding sites prediction with CNN, Deep neural net to predict target gene expression	1
2.7	Transcription Factor Binding via MLP, LSTM, CNN	1
2.8	Protein Contextual Embeddings via BERT	1

3	Module3BigDataBioinformatics	
3.1	OverviewofBigdata–Definition,Characteristics,Sources,Types-	1
	Structured,Unstructured&Semi-structured;	
3.2	DataStorageandAnalysis :COMPUTERSCIENCEANDENGINEER - NAS,DAS,NoSQLdatabases;Processing- SCVprinciple,BatchVsStreamprocessing	1
3.3	Big data Analytics- Typical Analytical Architecture – Requirement for new analytical architecture -Types (Descriptive, Inquisitive, Predictive, Perspective); Visualisation and Applications,	1
3.4	Computational facilities for analysing Big data – Cluster computing vs. Cloudcomputing,–ChallengesinBigDataAnalytics–Needofbigdata frameworks	1
3.5	BigdataFrameworks-MapReduce,HadoopandSpark,SparkSQLand dataframes,	1
3.6	SparkforBioinformatics,BigdataanalyticsusingPython-PySpark,	1
3.7	BigdataprocessingforDNAsequenceanalysis–PASTASpark	1
4	Module4DataAnalyticswithNGSdata	
4.1	Introductiontonextgenerationsequencing:NGSPlatforms,	1
4.2	NGStechnologies(WGS,ChIP-seq&RNA-seq),advantages,limitations and applications.	1
4.3	NGSDatasources:NCBISRA,EBI-ENA,DDBJ-SRA;	1
4.4	SRAtoolkit;NGSDataanalysis:FASTQfiles,Qualitycheck,Pre- processing,	1
4.4	Mapping-Principles,tools-BWA,Bowtie,SAMtools-outputfile formats - BAM, SAM;	1
4.5	Denovoassemblies-Principles,tools-	1
4.6	SOAPdenovo,Velvet;Visualizationtools-IGV;	1
4.7	WholeGenome/ExomepipelineforVariantcalling-VCFfiles.	1
5	Module5AdvancedDataAnalyticswithNGSdata	
5.1	RNAseq-Geneexpressionanalysis,.	1
5.2	Differentialexpressionanalysis.Alternativesplicing-	1
5.3	TopHatandCufflinksforRNAseq	1
5.4	ChIPseq-IntroductionandbiologicaltheoriesonChIPseqanalysis.	1
5.5	DNAfragmentevaluation.Peakidentification.Twocondition comparison. Saturation analysis.	1

5.6	Motif finding and related theories	1
5.7	Metagenomics analysis using QIIME and Picrust	1

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT245	PATTERN RECOGNITION	PROGRAMME ELECTIVE4	3	0	0	3

Preamble: This course aims to impart the fundamentals of statistical pattern recognition and neural network techniques. It introduces to the learner the various pattern recognition algorithms, feature selection, classification, clustering and the use of neural networks in feature extraction. This helps the learner to apply the algorithms in applications that work on pattern recognition and machine intelligence.

Course Outcomes: After the completion of the course the student will be able to

CO1	Apply probability and numerical methods in statistical pattern recognition. (Cognitive Knowledge Level: Apply)
CO2	Apply statistical methods in feature selection. (Cognitive Knowledge Level: Apply)
CO3	Apply linear algebra and statistical methods in parameter and non-parameter estimation. (Cognitive Knowledge Level: Apply)
CO4	Apply the technique of decision trees in pattern recognition. (Cognitive Knowledge Level: Apply)
CO5	Analyze the use of deep learning networks and artificial neural networks in pattern recognition. (Cognitive Knowledge Level: Analyze)
CO6	Design, Develop, Implement and Present innovative ideas in problems solving with various pattern recognition techniques. (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

:COMPUTERSCIENCEANDENGINEERING-CS2

PO5:An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6:An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	70%-80%
Analyze	30%-40%
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Evaluations shall only be based on application, analysis or design-based questions (for both internal and end semester examinations).

:COMPUTERSCIENCEANDENGINEERING-CS2

ContinuousInternalEvaluation:40marks

- i. Preparing a review article based on peer reviewed original publications (minimum 10 publications shall be referred) : 15 marks
- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation :15marks
- iii. Testpaper (1number) :10marks

Testpapershallincludeminimum80%ofthesyllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example, if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

CourseLevelAssessmentQuestions Course

Outcome 1 (CO1):

1. Illustrate the design cycle of a pattern recognition system with the help of an example.
2. Suppose that we have three coloured bottles r (red), b (blue) and g (green). Box r contains 3 apples, 4 oranges and 3 limes. Box B contains 1 apple, 1 orange and 0 limes and box g contains 3 apples, 3 oranges and 4 limes. If a box is chosen at random with probability $p(g)=0.2$, $p(b)=0.2$ and $p(r)=0.6$ and a piece of fruit is removed from the box (with equal probability of selecting items from the box), then what is the probability of selecting an apple? If we observe that the selected fruit is in fact an orange, what is the probability that it came from the green box?

:COMPUTERSCIENCEANDENGINEERING-CS2

CourseOutcome2(CO2):

1. Illustrate feature selection using t-Test with the help of an example.

CourseOutcome3(CO3):

1. Derive the fuzzy C-spherical shells (FCSS) algorithm for the case that spherical clusters are to be identified.

CourseOutcome4(CO4):

1. Illustrate decision tree with the help of an example. How does it enable pattern classification?
2. Construct a decision tree using the following data.

Outlook	Temp	Humidity	Windy	PlayGolf
Rainy	Hot	High	False	No
Rainy	Hot	High	True	No
Cloudy	Hot	High	False	Yes
Sunny	Mild	High	False	Yes
Sunny	Cool	Normal	False	Yes
Sunny	Cool	Normal	True	No
Cloudy	Cool	Normal	True	Yes
Rainy	Mild	High	False	No
Rainy	Mild	Normal	False	Yes
Sunny	Mild	Normal	False	Yes
Rainy	Cool	Normal	True	Yes
Cloudy	Mild	High	True	Yes
Cloudy	Mild	Normal	False	Yes
Sunny	Hot	High	True	No

CourseOutcome5(CO5):

1. How do artificial neural networks play a significant role in pattern recognition? Also discuss about its parameter optimisation techniques.

CourseOutcome6(CO6):

1. Suppose an accident-prone area is under surveillance and real-time CCTV visuals are available to you. Design a solution to automatically detect accidents on the road from

:COMPUTERSCIENCEANDENGINEERING-CS2

those real time CCTV visuals. Explain about any one pattern recognition algorithm you will make use here and how?

Model Question Paper QP

CODE:

Reg No: _____

Name: _____ PAGES:2

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY

SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR

Course Code: 25PADT245

Course Name: Pattern Recognition

Max. Marks: 60

Duration: 2.5 Hours

PART A

Answer All Questions. Each Question Carries 5 Marks

1. In a town it was estimated that 3% of people have a particular disease. A diagnosis test was conducted for all the people, which yielded 8% false positive and 92% true positive results. A person is found as positive after the test. What is the probability that this person is truly having the disease? (5)
2. How do morphological operations play a role in pattern recognition? (5)
3. How can visual imagery be analysed using convolutional neural networks? (5)
4. How does a decision tree handle continuous attributes? (5)
5. Define the terms: weights, bias, activations with respect to neural networks (5)

Part B

(Answer any five questions. Each question carries 7 marks)

6. Illustrate the design principles of pattern recognition system with an example. (7)
7. Derive the fuzzy C spherical shells (FCSS) algorithm for the case that spherical clusters are to be identified. (7)

8. Show that in the case of Gaussian distributions the Chernoff bound becomes (7)

$$\epsilon_{CB} = \exp(-b(s))$$

where

$$b(s) = \frac{s(1-s)}{2} (\boldsymbol{\mu}_i - \boldsymbol{\mu}_j)^T [s\boldsymbol{\Sigma}_j + (1-s)\boldsymbol{\Sigma}_i]^{-1} (\boldsymbol{\mu}_i - \boldsymbol{\mu}_j) + \frac{1}{2} \ln \frac{|s\boldsymbol{\Sigma}_j + (1-s)\boldsymbol{\Sigma}_i|}{|\boldsymbol{\Sigma}_j|^s |\boldsymbol{\Sigma}_i|^{1-s}}$$

Then take the derivative with respect to s and show that for equal covariance matrices the optimum is achieved for $s = 1/2$. Thus, in this case $b(s)$ equals the Bhattacharyya distance.

9. Let N_1, N_2 be the available values of a feature in two classes, respectively. The feature is assumed to follow a Gaussian distribution with the same variance in each class. Define the test statistic (7)

$$q = \frac{(\bar{x} - \bar{y}) - (\mu_1 - \mu_2)}{s_z \sqrt{\frac{1}{N_1} + \frac{1}{N_2}}}$$

where

$$s_z^2 = \frac{1}{N_1 + N_2 - 2} \left(\sum_{i=1}^{N_1} (x_i - \bar{x})^2 + \sum_{i=1}^{N_2} (y_i - \bar{y})^2 \right)$$

and μ_1, μ_2 are the respective true mean values. Show that q follows the t -distribution with $N_1 + N_2 - 2$ degrees of freedom.

10. Discuss the significance of pre-processing in feature selection. Illustrate any two methods used for pre-processing. (7)
11. How can artificial neural networks be applied in Pattern recognition? Also illustrate the features of recurrent neural network. (7)

12 Construct a decision tree using the following data.

(7)

Outlook	Temp	Humidity	Windy	PlayGolf
Rainy	Hot	High	False	No
Rainy	Hot	High	True	No
Cloudy	Hot	High	False	Yes
Sunny	Mild	High	False	Yes
Sunny	Cool	Normal	False	Yes
Sunny	Cool	Normal	True	No
Cloudy	Cool	Normal	True	Yes
Rainy	Mild	High	False	No
Rainy	Mild	Normal	False	Yes
Sunny	Mild	Normal	False	Yes
Rainy	Cool	Normal	True	Yes
Cloudy	Mild	High	True	Yes
Cloudy	Mild	Normal	False	Yes
Sunny	Hot	High	True	No

Syllabus

Module 1: Introduction to Pattern Recognition

Basics of pattern recognition systems, various applications, Machine Perception, classification of pattern recognition systems. Design of Pattern recognition system, Pattern recognition Life Cycle. Statistical Pattern Recognition: Review of probability theory, Gaussian distribution. Normal density and discriminant functions.

Module 2: Feature Selection

Feature selection – Outlier removal – Data normalization – Missing data, The Peaking phenomenon, Feature selection using statistical hypothesis testing – Hypothesis testing basics – Application of t-Test in feature selection. Class separability measures – Divergence – Chernoff bound and Bhattacharya distance – Scatter matrices, Feature subset selection – Scalar feature selection, Feature vector selection.

Module 3: Clustering Algorithms

Unsupervised learning and clustering - Criterion functions for clustering. Cluster validation. Fuzzy clustering algorithms – Point representatives – quadratic surfaces and representatives – hyperplane representatives. Binary morphology clustering algorithms (BMCAs) – Discretization – Morphological operations - Determination of clusters in a discrete binary set –

:COMPUTERSCIENCEANDENGINEERING-CS2

Assignment of feature vectors to clusters – The algorithmic scheme, Boundary detection algorithms.

Module4:Dimensionalityreduction

Dimensionality reduction: Principal component analysis - its relationship to Eigen analysis. Fisher discriminant analysis - Generalised Eigen analysis. Eigen vectors/Singular vectors as dictionaries. Factor Analysis, Total variability space - a dictionary learning method. Non negative matrix factorisation - a dictionary learning method.

Linear discriminant functions: Gradient descent procedures, Perceptron.

Module5:ArtificialneuralnetworksandPatternClassification

Artificial neural networks: Review of Artificial neural network concepts, convolutional neural networks, recurrent neural networks.

Non-metric methods for pattern classification: Non-numeric data or nominal data. Decision trees: Classification and Regression Trees (CART).

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADT246	ADVANCED COMPUTATIONAL LINGUISTICS	PROGRAMME ELECTIVE4	3	0	0	3

Preamble: To familiarize with the concepts in computational linguistics, modern grammar formalisms and NL generation. It covers TAG, Statistical parsing, NLG, Discourse processing, Lexical Functional Grammar (LFG), Morphotactics, Finite State Transducers and its use in morphology. Students will be able to understand the basics of TAG, statistical parsing, Logical forms, LFG, well-formedness of formalisms and apply them to Natural Language Generation (NLG) and Parsing

Course Outcomes: After the completion of the course, the student will be able to

CO1	Understand the basic concepts of Statistical Parsing and Semantic Knowledge Representation. (Cognitive knowledge level: Understand)
CO2	Make use of the concepts of Semantic Interpretation for problems (Cognitive knowledge level: Apply)
CO3	Apply the concepts of Speech Understanding in NL problems. (Cognitive knowledge level: Apply)
CO4	Apply the fundamentals of Lexical Functional Grammars (Cognitive knowledge level: Apply)
CO5	Apply the concepts of Morphological Parsing in real life problems. (Cognitive knowledge level: Apply)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the areas as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply the appropriate software tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7: An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

The end semester examination will be conducted by the respective College.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Give the details of dependency grammar.
2. How does Semantics relate to knowledge representation? What are the uses of Semantic-Based Knowledge Representation?

Course Outcome 2 (CO2)

1. Differentiate between syntactic and semantic grammar.
2. What is compositional semantics? Explain the significance of deep structure.

Course Outcome 3 (CO3):

1. How does Natural Language Generation (NLG) work? What are the application areas of NLG?
2. Describe Natural Language Generation techniques.

CourseOutcome4(CO4): :COMPUTERSCIENCEANDENGINEERING-CS2

1. Describe the Lexical Functional Grammar.

2. What are the well-formedness conditions?

CourseOutcome5(CO5):

1. What is morphotactics? Describe the importance of morphotactics?

2. How can we use Lexicon-free Finite-State Transducers for stemming?

APJABDULKALAM TECHNOLOGICAL UNIVERSITY		
SECOND SEMESTER. TECH DEGREE EXAMINATION, MONTH & YEAR		
Course Code: 25PADT246		
Course Name: ADVANCED COMPUTATIONAL LINGUISTICS		
Max. Marks:60	Hours	Duration:2.5
PART A		
Answer All Questions. Each Question Carries 5 Marks		
1.	Differentiate Tree adjoining Grammar (TAG) from Context free Grammar (CFG)	
2.	Illustrate semantic knowledge representation with a suitable example	
3.	How effectively, dependency grammar does statistical parsing?	
4.	Illustrate how <i>wh</i> movement can be handled in questions.	
5.	What is morphological parsing? Explain with a suitable example.	
Part B		
(Answer any five questions. Each question carries 7 marks)		
6.	(a) How dependency grammars are useful in syntactic parsing? Explain.	(4)
	(b) Illustrate the derivation using TAGs	(3)

7.	(a)	Explain case frames and case frame based parsing	(4)
	(b)	Explain how semantic processes work in NLP	(3)
8.	(a)	Differentiate NLG from NLU and the challenges in them.	(4)
	(b)	Explain discourse processing with an example	(3)
9.	(a)	Differentiate inflectional morphology from derivational morphology	(4)
	(b)	Explain Active, passive, and dative constructions.	(3)
10.		What is a finite state transducer? How is it useful in morphological analysis?	(7)
11.	(a)	Explain Discourse Processing and its significance	(4)
	(b)	Explain the techniques used in NLG	(3)
12.	(a)	Explain how morphological parsing is done using FST	(4)
	(b)	Explain the significance of lexicons and morphotactics in morphological parsing	(3)

SEMESTER II

INTERDISCIPLINARY ELECTIVE

:COMPUTERSCIENCEANDENGINEERING-CS2

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PCST251	INTRODUCTION TO MACHINE LEARNING	INTERDISCIPLINARY ELECTIVE	3	0	0	3

Preamble: This course helps the learners to understand the concepts in Machine Learning. Students will be able to understand the basics of regression, classification and clustering. After completing this course students will be able to develop machine learning based solution for real world problems in multidisciplinary environments.

Course Outcomes: After the completion of the course the student will be able to

CO1	Illustrate the concept, purpose, scope, steps, and applications of ML techniques. (Knowledge level : Apply)
CO2	Understand the concepts of supervised, unsupervised and reinforcement learning to apply in real world problems. (Knowledge level : Apply)
CO3	Illustrate the working of classifiers and clustering techniques for typical machine learning applications. (Knowledge level : Apply)
CO4	Acquire skills to improve the performance of Machine Learning models using ensemble techniques. (Knowledge level : Apply)
CO5	Design and Implement solution for a real world problem using Machine Learning algorithms (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the areas as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

:COMPUTERSCIENCEANDENGINEERING-CS2

PO7:An ability to develop cognitive load management skills related to project management and finance which focus on Entrepreneurship and Industry relevance.

Assessment Pattern

Bloom's Category	End Semester Examination
Apply	80%
Analyse	20%
Evaluate	
Create	

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern:

Continuous Internal Evaluation: 40 marks

Microproject/Course based project: 20 marks

Course based task/Seminar/Quiz: 10 marks

Test paper, 1 no. : 10 marks

The projects shall be done individually. Group projects not permitted. Test paper shall include minimum 80% of the syllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

End Semester Examination Pattern:

Total : 60 marks

The end semester examination will be conducted by the respective College. There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of

:COMPUTERSCIENCEANDENGINEERING-CS2

the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which students should answer any five. Each question can carry 7 marks. Total duration of the examination will be 150 minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40 + 20 = 60\%$.

Course Level Assessment Questions

Course Outcome 1 (CO1):

1. Suppose 10000 patients get tested for flu; out of them, 9000 are actually healthy and 1000 are actually sick. For the sick people, a test was positive for 620 and negative for 380. For the healthy people, the same test was positive for 180 and negative for 8820. Construct a confusion matrix for the data and compute the precision and recall for the data.
2. Distinguish between supervised learning and Reinforcement learning. Illustrate with an example.
3. Discuss any four examples of machine learning applications.

Course Outcome 2 (CO2)

1. State the mathematical formulation of the SVM problem. Give an outline of the method for solving the problem.
2. Show the final result of hierarchical clustering with complete link by drawing a dendrogram.

Course Outcome 3 (CO3):

1. Identify the first splitting attribute for the decision tree by using the ID3 algorithm with the following dataset.

2. Consider the training data in the following table where Play is a class attribute. In the table, the Humidity attribute has values —L| (for low) or —H| (for high), Sunny has values —Y| (for yes) or —N| (for no), Wind has values —S| (for strong) or —W| (for weak), and Play has values —Yes| or —No|.

What is the class label for the following day (Humidity=L, Sunny=N, Wind=W), according to naïve Bayesian classification?

3. Explain DBSCAN algorithm for density based clustering. List out its advantages compared to K-means.
4. Explain how Support Vector Machine can be used for classification of linearly separable data.
5. Define Hidden Markov Model. What is meant by the evaluation problem and how is this solved?
6. Use K Means clustering to cluster the following data into two groups. Assume cluster centroid are $m_1=2$ and $m_2=4$. The distance function used is Euclidean distance. {2, 4, 10, 12, 3, 20, 30, 11, 25 }

Course Outcome 4 (CO4):

1. Explain how the Random Forests give output for Classification, and Regression problems?
2. Is Random Forest an Ensemble Algorithm?
3. Why is the training efficiency of Random Forest better than Bagging?

CODE	COURSE NAME	CATEGORY		T	P	CREDIT
25PCST252	DATA STRUCTURES	INTERDISCIPLINARY ELECTIVE		0	0	3

Preamble: The purpose of the syllabus is to create awareness about Data Structures and their applications. After the completion of the course, the learners should be able to either use existing data structures or design their own data structures to solve real world problems.

Course Outcomes: After the completion of the course the student will be able to

CO1	Design algorithms for a task and calculate the time complexity of that algorithm (Cognitive Knowledge Level: Apply)
CO2	Use arrays and linked lists for problems solving (Cognitive Knowledge Level: Apply)
CO3	Represent data using trees, graphs and manipulate them to solve computational problems. (Cognitive Knowledge Level: Apply)
CO4	Make use of appropriate sorting algorithms to order data based on the situation. (Cognitive Knowledge Level: Apply)
CO5	Design and Implement appropriate Data Structures for solving a real world problem (Cognitive Knowledge Level: Create)

Program Outcomes (PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing the course.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the-art tool to model, analyse and solve practical engineering problems.

- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation :15 marks
- iii. Testpaper(1number) :10 marks

Testpaper shall includeminimum80%ofthesyllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

TheendsemesterexaminationwillbeconductedbytherespectiveCollege.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 question from each module, having 5 marks for each question. Students should answer all questions.Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the students in a course, through long answer questions relating to theoretical/practical knowledge, derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Totaldurationoftheexaminationwillbe150minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

For example if the average end semester mark % for a core course is 40, then the maximum eligible mark % for an elective course is $40+20 = 60\%$.

SampleCourseLevelAssessmentQuestions

Course Outcome1(CO1):

1. Writeanalgorithmformatrixmultiplicationandcalculateitstimecomplexity.
2. DefineBig-Onotation.DerivetheBig-Onotationfor $5n^3+2n^2+3^n$.
3. Checkwhetherthefollowingistrueornot.
 $2n+1$ is $O(2n)$. Give reason.

CourseOutcome2(CO2):

1. Howalinkedlistcanbeusedtorepresentthepolynomial

:COMPUTER SCIENCEAND ENGINEERING-CS2

$$5x^4y^6+24x^3y^4-17x^2y^3+15xy^2+45.$$

WriteaproceduretoaddtwoBivariatepolynomialsrepresentedusinglinkedlists.

2. Write an algorithm/pseudocode to convert a given infix expression to postfix expression. Trace the steps involved in converting the given infix expression $((A + B)^C) - ((D * C) / F)$ to postfix expression.
3. Let L1 be a singly linked list in memory. Write an algorithm that
 - i) Find the number of non zero elements in L1
 - ii) Add a given value K to each element in L1

Course Outcome 3(CO3):

1. Create a Binary Tree with the following sequence 14, 15, 4, 18, 9, 16, 20, 17, 3, 7, 5, 2 and perform inorder, preorder and postorder traversals on the above tree and print the output of the traversals.
2. In a complete binary tree of depth d (complete including last level), give an expression to find the number of leaf nodes.

Course Outcome 4(CO4):

1. Write an algorithm/pseudocode to sort elements using Heapsort technique. Illustrate the working of Heap sort algorithm on the following input : 35, 15, 0, 1, 60
2. With the help of an algorithm/pseudocode and suitable example, explain how you would perform binary search on an array of n elements. Find the time complexity of binary search algorithm.
3. Suppose an array contains elements {10, 13, 21, 32, 35, 44, 55}. Give the steps to find an element—35 using i) linear search ii) binary search

Course Outcome 5(CO5):

Design a reservation system for railway that includes a waiting list. If the reservation is full, display —reservation full and put them in the waiting list and give a waiting list number. If a passenger wishes to cancel his ticket, he may do it any time. Then the passenger at the front of the waiting list is allotted a berth automatically.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PCST253	SOFTWARE PROJECT MANAGEMENT	INTERDISCIPLINARY ELECTIVE	3	0	0	3

Preamble: This course provides fundamental knowledge in the Software Development Process.It covers Software Development, Quality Assurance, Project Management concepts and technology trends. This course enables the learners to apply state of the art industry practices in Software development.

CourseOutcomes:Afterthecompletionofthecourse the studentwillbeableto

CO1	DemonstrateTraditionalandAgileSoftwareDevelopmentapproaches(Cognitive Knowledge Level: Apply)
CO2	PrepareSoftwareRequirementSpecificationandSoftwareDesignforagivenproblem. (Cognitive Knowledge Level: Apply)
CO3	Justify the significance of design patterns and licensing terms in software development, prepare testing, maintenance and DevOps strategies for a project. (Cognitive Knowledge Level: Apply)
CO4	Make use of software project management concepts while planning, estimation, scheduling, tracking and change management of a project, with a traditional/agile framework. (Cognitive Knowledge Level: Apply)
CO5	Utilize SQA practices, Process Improvement techniques and Technology advancements in cloud based software models and containers & microservices. (Cognitive Knowledge Level: Apply)

ProgramOutcomes(PO)

Outcomes are the attributes that are to be demonstrated by a graduate after completing thecourse.

PO1: An ability to independently carry out research/investigation and development work in engineering and allied streams

PO2: An ability to communicate effectively, write and present technical reports on complex engineering activities by interacting with the engineering fraternity and with society at large.

:COMPUTER SCIENCEAND ENGINEERING-CS2

PO3: An ability to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program

PO4: An ability to apply stream knowledge to design or develop solutions for real world problems by following the standards

PO5: An ability to identify, select and apply appropriate techniques, resources and state-of-the- art tool to model, analyse and solve practical engineering problems.

PO6: An ability to engage in life-long learning for the design and development related to the stream related problems taking into consideration sustainability, societal, ethical and environmental aspects

PO7:Anabilitytodevelopcognitiveloadmanagementskillsrelatedtoprojectmanagementand finance which focus on Entrepreneurship and Industry relevance.

Markdistribution

TotalMarks	CIE	ESE	ESE Duration
100	40	60	2.5hours

ContinuousInternalEvaluationPattern:

Evaluation shall only bebased on application, analysis or design based questions (for both internal and end semester examinations).

ContinuousInternalEvaluation:40marks

- i. Preparingareviewarticlebasedonpeerreviewedororiginalpublications(minimum10 publications shall be referred) : 15 marks
- ii. Coursebasedtask/Seminar/Datacollectionandinterpretation :15 marks
- iii. Testpaper(1number) :10 marks

Testpaper shallincludeminimum 80%ofthesyllabus.

Course based task/test paper questions shall be useful in the testing of knowledge, skills, comprehension, application, analysis, synthesis, evaluation and understanding of the students.

EndSemesterExaminationPattern:

TheendsemesterexaminationwillbeconductedbytherespectiveCollege.

There will be two parts; Part A and Part B.

Part A will contain 5 numerical/short answer questions with 1 questionfrom each module, having 5 marks for each question. Students should answer all questions. Part B will contain 7 questions (such questions shall be useful in the testing of overall achievement and maturity of the studentsin a course, through long answer questions relating to theoretical/practical knowledge,derivations, problem solving and quantitative evaluation), with minimum one question from each module of which student should answer any five. Each question can carry 7 marks

Totaldurationoftheexaminationwillbe150minutes.

Note: The marks obtained for the ESE for an elective course shall not exceed 20% over the average ESE mark % for the core courses. ESE marks awarded to a student for each elective course shall be normalized accordingly.

:COMPUTER SCIENCEAND ENGINEERING-CS2

Forexampleiftheaverageendsemestermark%foracorecourseis40,thenthemaximum eligible mark % for an elective course is $40+20 = 60 \%$.

CourseLevel AssessmentQuestions

CourseOutcome1(CO1):

1. Whataretheadvantagesofanincrementaldevelopmentmodelovera waterfall model?
2. Illustrate how the process differs in agile software development and traditionalsoftwaredevelopmentwithasociallyrelevantcasestudy. (Assignment question)

CourseOutcome2(CO2):

1. Howtoprepareasofwarerequirementspecification?
2. DifferentiatebetweenArchitecturaldesignandComponentleveldesign.
3. Howdoesagileapproacheshelpsoftwaredeveloperstocaptureanddefinethe user requirements effectively?
4. WhatistherelevanceoftheSRSspecificationinsoftwaredevelopment?
5. Prepareausecasediagramforalibrarymanagementsystem.

CourseOutcome3(CO3):

1. Differentiatebetweenthe differenttypesofsoftwaretestingstrategies.
2. JustifytheneedforDevOpspractices?
3. Howdodesignpatternshelpsoftwarearchitectscommunicatethedesignofa complex system effectively?
4. Whataretheproactiveapproachesonecantaketooptimiseeffortsinthetesting phase?

CourseOutcome4(CO4):

1. Illustratetheactivitiesinvolvedinsoftwareprojectmanagementforasocially relevant problem?
2. HowdoSCRUM,KanbanandLeanmethodologieshelpsoftwareproject management?
3. Isrollinglevelplanninginsoftwareprojectmanagementbeneficial? Justify your answer.
4. Howwouldyouassesstherisksinyoursoftwaredevelopmentproject? Explain how you can manage identified risks?

:COMPUTER SCIENCEAND ENGINEERING-CS2

CourseOutcome5(CO5):

1. JustifytheimportanceofSoftwareProcessimprovement?
2. Explainthebenefitsofcloudbasedsoftwaredevelopment,containersand microservices.
3. Givetheroleofretrospectivesinimprovingthesoftwaredevelopmentprocess.
4. Illustratetheuseofprojecthistorydataasapredictiontooltoplanfuture socially relevant projects.

Syllabus

Module1:IntroductiontoSoftwareEngineering(7hours)

IntroductiontoSoftwareEngineering-Professionalsoftwaredevelopment,
Softwareengineering

ethics. Software process models - The waterfall model, Incremental development. Process activities - Software specification, Software design and implementation, Softwarevalidation, Software evolution. Coping with change - Prototyping, Incremental delivery, Boehm's Spiral Model. Agile software development - Agile methods, agile manifesto - values and principles. Agile development techniques, Agile Project Management. Case studies : An insulin pump control system. Mentcare - a patient information system for mental health care.

Module2:RequirementAnalysisandDesign(8hours)

Functional and non-functional requirements, Requirements engineering processes. Requirements elicitation, Requirements validation, Requirements change, Traceability Matrix.Developingusecases,SoftwareRequirementsSpecificationTemplate,Personas, Scenarios, User stories, Feature identification. Design concepts - Design within the context of software engineering, Design Process, Design concepts, Design Model. Architectural Design - Software Architecture, Architectural Styles, Architectural considerations, Architectural Design Component level design
- What is a component?, Designing Class-Based Components, Conducting Component level design, Component level design for web-apps. Template of a Design Document as per —IEEE Std 1016-2009 IEEE Standard for Information Technology Systems Design Software Design Descriptions|. Case study: The Ariane 5 launcher failure.

Module3:ImplementationandTesting(9hours)

Object-oriented design using the UML, Design patterns, Implementation issues, Open-source development - Open-source licensing - GPL, LGPL, BSD. Review Techniques - Cost impact ofSoftware Defects, Codereviewand statistical analysis. Informal Review,

:COMPUTER SCIENCEAND ENGINEERING-CS2

Formal Technical Reviews, Post-mortem evaluations. Software testing strategies - Unit Testing, Integration Testing, Validation testing, System testing, Debugging, White box testing, Path testing, Control Structure testing, Black box testing, Testing Documentation and Help facilities. Test automation, Test-driven development, Security testing. Overview of DevOps and Code Management - Code management, DevOps automation, Continuous Integration, Delivery, and Deployment (CI/CD/CD). Software Evolution - Evolution processes, Software maintenance.

Module4:Software ProjectManagement(6hours)

Software Project Management - Risk management, Managing people, Teamwork. Project Planning, Software pricing, Plan-driven development, Project scheduling, Agile planning. Estimation techniques, COCOMO cost modeling. Configuration management, Version management, System building, Change management, Release management, Agile software management - SCRUM framework. Kanban methodology and lean approaches.

Module5 :SoftwareQuality, ProcessImprovementandTechnologytrends(6 hours)

Software Quality, Software Quality Dilemma, Achieving Software Quality Elements of Software Quality Assurance, SQA Tasks , Software measurement and metrics. Software Process Improvement(SPI), SPI Process CMMI process improvement framework, ISO 9001:2000 for Software. Cloud-based Software - Virtualisation and containers, Everything as a service(IaaS, PaaS), Software as a service. Microservices Architecture - Microservices, Microservices architecture, Microservice deployment.

INDUSTRYELECTIVE

222EEXXXX	AI DRIVEN THREAT ANALYSISFORCYBER SECURITY	CATEGORY	L	T	P	CREDIT
		Industry Elective	3	0	0	3

Preamble:

The purpose of this course is to provide the learner a comprehensive understanding of how artificial intelligence (AI) is transforming the field of threat analysis in the context of cyber security. Course explores cutting-edge applications of AI in anomaly analysis, detection and providing predictive analytics. Necessary tools to analyze threats, protect valuable data,malwareanalysis,cloudsecurityandincident response will also be covered in the course.

CourseOutcomes:

Afterthecompletionofthecoursestudentswillbeableto

CO1	Develop a deep understanding of the fundamental concepts, principles, and technologies that underpin AI-driven threat analysis in the realm of cyber security.(Cognitive Knowledge Level: Create)
CO2	Gain insights into the evolving cyber threat landscape, including the various types of threats, attack vectors, and vulnerabilities commonly exploited by malicious actors. (Cognitive Knowledge Level: Create)
CO3	Apply AI techniques to detect, analyze, and mitigate cyber threats, enabling proactive defense and timely incident response.(Cognitive Knowledge Level: Apply)
CO4	Developskillsingathering,analyzing,andinterpretingthreatintelligence to proactively identify and track potential threats, as well as engage in threat hunting activities.(Cognitive Knowledge Level: Analyze)

CO5	Enhance the ability to collaborate with multidisciplinary teams, communicate effectively about cyber threats and their implications, and provide actionable recommendations for cyber security improvements along with an awareness of the ethical considerations and challenges related to AI-driven threat analysis in cyber security (Cognitive Knowledge Level: Analyze)

Mapping of course outcomes with program outcomes:

Analysis	40-30%
Evaluate	
Create	

Mark Distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 Hours

The assessment pattern for Industry based electives is as follows:

Continuous Internal Evaluation: 40 marks

The continuous internal evaluation will be done by the expert in the Industry handling the course.

Micro project/Course based project: 20 marks

Course based task/Seminar/Quiz: 10

marks Test paper, 1 no. : 10 marks

The project shall be done individually. Group projects not permitted. Test papers shall include minimum 80% of the syllabus.

End Semester Examination: 60 marks

The examination will be conducted by the respective College with the question paper provided by the Industry. The examination will be for 150 minutes and will contain 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks. The valuation of the answer scripts shall be done by the expert in the Industry handling the course.

Syllabus

Module 1

Cybersecurity-Enterprise level-Identity and Access Management-Authentication - Authorization - User Management-Central User Repository - Privileged Access Management.

Malware Analysis-Detect and Analyze Modern Malware - Hands-on Analysis of a malware.

Module 2

Software Development Security - Understand and Integrate Security in the software development Life cycle (SDLC) - Identify and apply security controls in software development ecosystem - Define and apply secure coding guidelines and standards. - OWASP - Broken Access Control - Cryptographic failures - Injection - Insecure Design - Security Misconfiguration - Vulnerable and outdated components - Identification and Authentication failures - Software and Data Integrity failures - Security Logging and Monitoring - Server side failures Request forgery (SSRF).

Module3

Cryptography&Hashing-DifferentCryptographicmethodsusedinIndustry
-Hashingmethods.

Advanced Threat Detection using AI - Introduction to advanced threat detection techniques - Exploring anomaly detection, behavior analysis, and machine learning in threat detection - Case studies and real-world examples of advanced threat detection systems.

AI-driven Network and Asset Mapping - Overview of AI-driven network and asset mapping techniques - Understanding the importance of network and asset visibility in cybersecurity - Exploring AI-powered network and asset mapping and visualization platforms.

Module4

Security Assessment and Penetration Testing - Overview of security assessment methodologies and frameworks - Understanding the role of penetration testing in identifying vulnerabilities - Exploring tools and techniques for security assessment and penetration testing.

Cloud Security - Introduction to cloud computing security challenges and considerations -Understandingcloudservicemodelsanddeploymentmodels
-Exploringcloudsecuritycontrolsandbestpractices.

Module5

Incident Response and Forensics - Advanced incident response techniques and forensic investigation methodologies -Understanding memory forensics, loganalysis,andmalware analysisinincident response-Hands-onexercise: Conducting an advanced incident response and forensic investigation.

Emerging Trends and Future of Cybersecurity - Discussion on current and emerging trends in cybersecurity - Exploring topics such as AI in cybersecurity, IoT security, and blockchain security.

Name: _____ Pages: 2

APJABDULKALAMTECHNOLOGICALUNIVERSITY

SECONDSEMESTER.TECHDEGREEEXAMINATION,MONTH&YEAR

CourseCode:.....

CourseName:.....

Max.Marks:60

Duration:2.5Hours

PART A

Answer any 5 Questions. Each Question Carries 12 Marks

1. Discuss the importance of identity and access management in today's digital landscape and explain how it helps organizations enhance security and protect sensitive information.
2. What are some common types of malware and their characteristics? Describe the challenges faced by malware analysts in analyzing advanced and evasive malware.
3. Explain the significance of incorporating security measures throughout the software development life cycle (SDLC) and discuss the key practices and methodologies that can enhance the security of software systems.
4. Explain AI-driven network and asset mapping techniques in detail.
5. Discuss the role and significance of penetration testing in ensuring the security of computer systems and networks.
6. Differentiate between various cloud service models. Also, explain cloud deployment models.

7. Explain the advanced incident response techniques used in handling sophisticated cyber incidents, including targeted attacks and advanced persistent threats (APTs). Also, discuss the challenges faced by incident responders and how these techniques help in effectively mitigating and investigating such incidents.

MOOC COURSES

The MOOC course shall be considered only if it is conducted by the agencies namely AICTE/NPTEL/SWAYAM or NITTTR. The MOOC course should have a minimum duration of 8 weeks and the content of the syllabus shall be enough for at least 40 hours of teaching. The courses should have a proctored/offline end semester examination. The students can do the MOOC according to their convenience, but shall complete it by third semester. The list of MOOC courses will be provided by the concerned BoS if at least 70% of the course content match with the area/stream of study. The courses shall not be considered if its content has more than 50% of overlap with a core/elective course in the concerned discipline or with an open elective.

MOOC Course to be successfully completed before the commencement of fourth semester (starting from semester 1). A credit of 2 will be awarded to all students who ever successfully completes the MOOC course as per the evaluation pattern of the respective agency conducting the MOOC.

TEMPLATE FOR SYLLABUS

CODE		CATEGORY	L	T	P	CREDIT
25PAGT301	ACADEMIC WRITING	AUDIT COURSE	3	0	0	NIL

Preamble: Learning academic writing sharpens minds, teaches students how to communicate, and develops their thinking capacities and ability to understand others. Writing is thinking, and every student deserves to be a strong thinker. It can also make them think more carefully about what they write. Showing work to others can help to foster a better culture of learning and sharing among students. It also gives students a sense of how they are contributing to the body of work that makes up an academic subject.

Course Outcomes: The COs shown are only indicative. For each course, there can be 4 to 6 COs. After the completion of the course the student will be able to

C01	Understand the principles of scientific/academic writing
C02	Analyse the technique of scientific writing from the reader's perspective
C03	Apply the concepts of setting expectations and laying the progression tracks
C04	Evaluate the merit of a title, abstract, introduction, conclusion and structuring of a research paper
C05	Justify the need using a project proposal or a technical report
C06	Prepare a review paper, an extended abstract and a project proposal

Syllabus and Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2 credit courses, the content can be for 26 hrs. The audit course in third semester can have content for 30 hours).

Syllabus:

CODE 25PAG E300	ACADEMIC WRITING	Audit
Module No.	Topics in a module	Hours
1	Fundamentals of Academic writing from a reader's perspective: acronyms, synonyms, pronouns, disconnected phrases, background ghetos, abusive detailing, cryptic captions, long sentences: all that take their toll on readers' memory.	6
2	Fluid reading & reading energy consumption: setting expectations and laying Progression tracks; Reading energy consumption	6
3	How to write the Title, abstract, introduction; Structure the writing with headings & subheadings	6
4	Visuals: Resources, Skills, and Methods; Conclusion; References; Bibliography; Grammar in technical writing	6
5	Techniques of writing: An extended abstract, a project proposal, a research paper, a technical report.	6

Course Plan:

No	Topic	No. of Lectures
1	Fundamentals of Academic writing from a reader's perspective: acronyms, synonyms, pronouns, disconnected phrases, background ghetos, abusive detailing, cryptic captions, long sentences all take their toll on readers' memory.	
1.1	The Reading tool-kit to reduce memory required; reduce reading time	1
1.2	Acronyms, Pronouns, Synonyms; Background, broken couple, words overflow	1
1.3	Sustain attention: Keep the story moving forward; Twists, shouts, Pause to clarify, recreate suspense	2

1.4	Keep the reader motivated: Fuel and meet Expectations; Bridge knowledge gap: ground level; Title words; Just In Time to local background	2
2	Fluid reading & reading energy consumption: setting expectations and laying Progression tracks; Reading energy consumption	
2.1	Setting expectations of the reader from Grammar, from the theme	1
2.2	Progression tracks for fluid reading: Topic & stress; topic and non-topic based progression tracks; pause in progression	2
2.3	Detection of sentence fluidity problems: No expectations / Betrayed expectations	2
2.4	Controlling reading energy consumption: the energy bill; Energy fuelling stations: Pause	1
3	How to write the Title, abstract, introduction; Structure the writing with headings & subheadings	
3.1	Title: Face of the paper: Techniques, Qualities & Purpose of title; Metrics	1
3.2	Abstract: Heart of the paper: 4 parts; coherence; tense of verbs, precision; purpose & qualities of the abstract; Metrics	2
3.3	Structure: Headings & sub-headings: Skeleton of the paper; principles for a good structure; Syntactic rules; Quality & Purpose of structures; Metrics	1
3.4	Introduction: Hands of the paper: Start, finish; scope, definitions; answers key reader questions; As a personal active story; Traps, qualities; Metrics	2
4	Visuals: Resources, Skills, and Methods; Conclusion; References; Bibliography; Grammar in technical writing	
4.1	Visuals as the voice of your paper: principles; purpose & qualities of visuals; metrics	2
4.2	Conclusion: contents; purpose, quality; metrics; Abstracts Vs. Conclusion; examples, counter-examples	1
4.3	References, Bibliography: Styles, punctuation marks, quotes, citations	1
4.4	Grammar in Technical writing: Articles, Syntax, Main and subordinate clauses; Active & passive voices; some commonly made mistakes in technical writing.	2
5	Techniques of writing: An extended abstract, a project proposal, a research paper, a technical report.	
5.1	Extended abstract: abstract and keywords, introduction and objective, method, findings and argument, conclusion and suggestions and references.	1
5.2	Project Proposal: Types, executive summary, background including status, objectives, solution, milestones, deliverables, timelines, resources, budgeting, conclusion	2
5.3	Research paper: writing an overview article: provide a comprehensive foundation on a topic; explain the current state of knowledge; identify gaps in existing studies for potential future research; highlight the main methodologies and research techniques	2

5.4	Writing Technical Reports: Title page; Summary; Table of contents; Introduction; Body; Figures, tables, equations and formulae; Conclusion; Recommendations.	1

25PAGT302	ADVANCED ENGINEERING MATERIALS	CATEGORY	L	T		CREDIT
		AUDIT COURSE	3	0		-

Preamble: This course is designed in a way to provide a general view on typically used advanced classes of engineering materials including metals, polymers, ceramics, and composites.

Course Outcomes: After the completion of the course the student will be able to

CO1	Analyse the requirement and find appropriate solution for use of materials.
CO2	Differentiate the properties of polymers, ceramics and composite materials.
CO3	Recognize basic concepts and properties of functional materials.
CO4	Comprehend smart and shape memory materials for various applications.
CO5	Appraise materials used for high temperature, energy production and storage applications.

Test papers shall include minimum 80% of the syllabus.

End Semester Examination Pattern: 60 marks

The examination will be conducted by the respective College. The examination will be for 150 minutes and will contain 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks.

Model Question paper**AUDIT COURSE****25PAGT302-ADVANCED ENGINEERING MATERIALS**

(Answer any five questions. Each question carries 12 Marks)

1.	a) State the relationship between material selection and processing.	5
	b) Write about the criteria for selection of materials with respect to the cost and service requirements for engineering applications.	7
2.	a) Differentiate thermosetting and thermoplastics with suitable examples.	5
	b) Briefly discuss about the properties and applications of polymer nano composite materials.	7
3.	a) Write about the potential application areas of functionally graded materials.	5
	b) With neat sketch describe any one processing technique of functionally graded materials.	7
4.	a) — Smart materials are functional? Justify the statement.	5
	b) Explain the terms electrostriction and magnetostriction with its application.	7

5. a) What are the factors influencing functional life of components at elevated temperature? 5
- b) What are superalloys and what are their advantages? 7
- 6 a) What is a shape memory alloy? What metals exhibit shape memory characteristics? 4
- b) Explain about the detection capabilities and uses of pyroelectric sensors. 8
- 7 a) Differentiate between conventional batteries and fuel cells. 4
- b) Explain the construction and working of a Li-ion battery. 8

Syllabus

Module	Content	Hours	Semester Exam Marks (%)
I	Requirements / needs of advanced materials. Classification of materials, Importance of materials selection, Criteria for selection of materials; motivation for selection, cost basis and service requirements. Relationship between materials selection and processing.	5	20
II	Classification of non-metallic materials. Polymer, Ceramics: Properties, processing and applications. NanoComposites - Polymer nanocomposites (PNCs), Processing and characterisation techniques – properties and potential applications.	7	20
III	Functionally graded materials (FGMs), Potential Applications of FGMs, classification of FGMs, processing techniques. limitations of FGMs.	6	20
IV	Smart Materials: Introduction, smart material types - pyroelectric sensors, piezoelectric materials, electrostrictors and magnetostrictors, shape memory alloys – associated energy stimulus and response forms, applications.	5	20
V	High Temperature Materials: super alloys – main classes, high temperature properties of superalloys, applications. Energy Materials: materials for batteries.	7	20

Course Plan

No	Topic	No. of Lectures
1	Selection of materials for engineering applications	
1.1	Benefits of advanced materials, classification of materials, importance of materials selection	2
1.2	Selection of materials for different properties, strength, toughness, fatigue and creep	1
1.3	Selection for surface durability, corrosion and wear resistance	1
1.4	Relationship between materials selection and processing	1
2	Classification of non-metallic materials & nanocomposites	
2.1	Rubber: properties, processing and applications.	1
2.2	Plastics: thermosetting and thermoplastics, applications and properties.	2
2.3	Ceramics: properties and applications.	1
2.4	Introduction to nanocomposites, classification	1
2.5	Processing and characterisation techniques applicable to polymer nanocomposites.	2
3	Functionally graded materials	
3.1	General concept, Potential Applications of FGMs	2
3.2	Classification of FGMs	1
3.3	FGMs processing techniques: powder metallurgy route, melt-processing route	2
3.4	Limitations of FGMs	1
4	Smart materials	
4.1	Introduction to smart materials, types	1
4.2	Pyroelectric sensors- material class, stimulus, detection capabilities and uses	1
4.3	Piezoelectric materials- material class, stimulus, sensing and actuating applications	1
4.4	Electrostrictors and magnetostrictors- material class, stimulus, micro-positioning capabilities and applications	1
4.5	Shape memory alloys (SMAs)- material class, stimulus, temperature sensing and high strain responses, applications.	1
5	High Temperature Materials and Energy Materials	
5.1	Characteristics of high-temperature materials, superalloys as high-temperature materials	1
	superalloys- properties and applications	2
5.2	Introduction to lithium-ion battery (LIBs), operating mechanisms and applications	2
5.3	Introduction to Zn-based battery system, types and existing challenges	2

25PAGT304	DATASCIENCEFOR ENGINEERS	CATEGORY	L	T	P	CREDIT
		AUDIT COURSE	3	0	0	0

Preamble: This course covers essentials of statistics and Linear Algebra and how to prepare the data before processing in real time applications. The students will be able to handle missing data and detection of any outliers available in the dataset. This course explores data science, Python libraries and it also covers the introduction to machine learning for engineers.

Course Outcomes: After the completion of the course the student will be able to

CO1	Study Data Science Concepts and statistics
CO2	Demonstrate Understanding of Mathematical Foundations needed for Data Science
CO3	Understand Exploratory analysis and Data Visualization and Preprocessing on given dataset
CO4	Implement Models such as Naive Bayes, K-Nearest Neighbors, Linear and Logistic Regression
CO5	Build real time data science applications and test use cases

APJABDULKALAM TECHNOLOGICAL UNIVERSITY
THIRD SEMESTER. TECH DEGREE EXAMINATION, MARCH 2024

Course Code: 25PAGT304

Course Name: DATA SCIENCE FOR ENGINEERS

Max. Marks: 60

Duration: 2.5 Hours

Answer any five full questions, each carries 12 marks.

1. a) It is observed that 50% of mails are spam. There is software that filters spam mail before reaching the inbox. Its accuracy for detecting a spam mail is 99% and chances of tagging a non-spam mail as spam mail is 5%. If a certain mail is tagged as spam, find the probability that it is not a spam mail. 5
b) Depict the relevance of measures of central tendency in data wrangling with a suitable example. 7
2. a) Calculate the inverse of the Matrix 4
$$\begin{bmatrix} 2 & 4 & -6 \\ 7 & 3 & 5 \\ 1 & -2 & 4 \end{bmatrix}$$

b) Find all Eigen values and Corresponding Eigen vectors for the matrix if 8
$$\begin{bmatrix} 2 & -3 & 0 \\ 2 & -5 & 0 \\ 0 & 0 & 3 \end{bmatrix}$$
3. a) A statistician wants to test the hypothesis $H_0: \mu = 120$ using the alternative hypothesis $H_a: \mu > 120$ and assuming that $\alpha = 0.05$. For that, he took the sample values as $n = 40$, $\sigma = 32.17$ and $\bar{x} = 105.37$. Determine the conclusion for this hypothesis? 5
b) Hypothesis testing is an integral part of statistical inference, list out the various types of hypothesis testing and also mention their significances in data science. 7
4. a) Briefly detail directional and non-directional hypothesis 6
b) Differentiate null and alternate hypothesis and also elaborate on type 1 and type 2 errors 6
5. a) Explain the concepts of Tuple, List and Directory in Python with example 6
b) Elucidate reinforcement learning and application in real world. 6

6. a) What is Feature Engineering, demonstrate with an example 6
- b) Describe in detail different steps involved in data preprocessing. 6
7. a) Illustrate supervised learning model with linear regression model 5
- b) Predict the probability for the given feature vector if an accident will happen or not? 7
- Weather condition: rain, Road condition: good, Traffic condition: normal, Engine problem: no, the task is to predict using Naïve Bayes classification.

SNo.	Weather condition	Road condition	Traffic condition	Engine problem	Accident
1	Rain	bad	high	no	yes

APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY THIRD SEMESTER, TECH DEGREE EXAMINATION, MARCH 2024			
Course Code: 25PAGT305			
Course Name: DESIGN THINKING			
Max. Marks: 60		Duration: 2.5 Hours	
<i>Answer any five full questions, each carries 12 marks.</i>			
1a)	How can a multidisciplinary team collaborate effectively to implement design principles?		7
1b)	What are the key differences between human-centred design and other design methodologies?		5
2a)	How do you measure the success of a design project in terms of user satisfaction and impact?		7
2b)	How does the iterative nature of the design process contribute to better outcomes?		5

3a)	What are the fundamental principles of effective brainstorming, and how do they differ from traditional problem-solving approaches?	7
3 b)	What are some key principles of ergonomic design, and how do they contribute to the usability and comfort of products?	5
4a)	Enumerate some examples of successful and unsuccessful market testing scenarios, and what lessons can be learned from these experiences to improve future product or service launches?	7
4b)	What is the primary purpose of creating prototypes in the design and development process?	5
5	What strategies and methodologies can designers use to embrace agility and respond quickly to changing user needs and market dynamics?	12
6	Illustrate any four examples of successful bio-mimicry applications in various industries.	12
7	What ethical considerations should designers keep in mind when designing for diverse user groups?	12

Syllabus:

Module1

Design process: Traditional design, Design Thinking Approach, Introduction to Design Thinking, History and evolution of Design Thinking, Role of design thinking in the human-centred design process. Design space, Design Thinking in a Team Environment, Team formation.

Module2

Design Thinking Stages: Empathize, Define, Ideate, Prototype and Test. The importance of empathy, Building a user-centred mindset. Problem statement formulation, User needs and pain points, establishing target specifications, Setting the final specifications.

Module3

Generating Ideas, Brainstorming techniques, Application of Aesthetics and Ergonomics in Design. Bio-mimicry, Conceptualization, Visual thinking, Drawing/Sketching, Presenting ideas.

Module4

Use of prototyping, Types of prototypes, Rapid prototyping techniques, User testing and feedback collection, Iterative prototyping, testing to gauge risk and market interest

Module5

Entrepreneurship/business ideas, Patents and Intellectual Property, Agility in design, Ethical considerations in design. Overcoming common implementation challenges

Course Plan Syllabus and Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2 credit courses, the content can be for 26 hrs. The audit course in third semester can have content for 30 hours).

SYLLABUS

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PAGT306	FUNCTIONAL PROGRAMMING IN HASKELL	AUDIT COURSE	3	0	0	-

Preamble: This course introduces a functional programming approach in problem solving. Salient features of functional programming like recursion, pattern matching, higher order functions etc. and the implementation in Haskell are discussed.

Course Outcomes:

After the completion of the course the student will be able to

CO1	Understand the functional programming paradigm which is based on the mathematics of lambda calculus.
CO2	Develop Haskell programs using functions, guards and recursive functions
CO3	Apply the concept of tuples, lists and strings in Haskell programming
CO4	Apply the concept of algebraic data types, abstract data types, modules, recursive data types and user defined data types in Haskell programming
CO5	Develop Haskell programs with files for reading input and storing output

Mapping of course outcomes with program outcomes

AP JABDULKALAM TECHNOLOGICAL UNIVERSITY THIRD SEMESTER. TECH DEGREE EXAMINATION, DECEMBER 2023			
Course Code: 25PAGT306			
Course Name: Functional Programming in Haskell			
Max. Marks: 60		Duration: 2.5 Hours	
<i>Answer any five full questions, each carries 12 marks.</i>			
1a.	Explain the basic differences between imperative style programming and functional style programming.	3	
1b.	Analyse each of the following lambda expressions to clarify its structure. If the expression is a function, identify the bound variable and the body expression, and then analyse the body expression. If the expression is an application, identify the function and argument expressions, and then analyse the function and argument expressions: i) $\lambda a. (a \lambda b. (ba))$ ii) $\lambda x. \lambda y. \lambda z. ((zx)(zy))$ iii) $(\lambda f. \lambda g. (\lambda h. (gh)f) \lambda p. \lambda q. p)$	9	
2a.	Design a recursive function to find 2^n where n is a natural number.	4	

2b.	Explain various forms of function definitions in Haskell with the help of examples.	8
3a.	Explain any three list operations along with function definitions and examples.	6
3b.	Write a program to duplicate only even numbers among the elements of a list using a Haskell function by (i) Recursion (ii) List Comprehension and explain. Example: $\lambda > \text{dupli}[1,2,3]$ ANS: $[2,2]$	6
4	Write Recursive definitions along with an explanation for the below arithmetic operations. Illustrate the recursive flow with the help of a diagram. i. $\text{add } x \ y$ ii. $\text{mult } x \ y$ iii. $\text{div } x \ y$	12
5	Write the Haskell code to split a list into two lists such that the elements with odd index are in one list while the elements with even index are in the other list.	12
6a	Give the typed definition of a binary tree along with explanation of two functions on binary trees.	6
6b	Define a queue data type in Haskell along with any two operations on it with examples.	6
7a.	Explain the basic steps of reading from files and writing to files in Haskell.	4
7b.	Write a Haskell program to read from the file—input.txt, display the contents on the screen and write the contents to another file—output.txt.	8

Syllabus and Course Plan (For 3 credit courses, the content can be for 40 hrs and for 2 credit courses, the content can be for 26 hrs. The audit course in third semester can have content for 30 hours).

Module 1 (5Hrs)

Introduction to Functional Programming: Programming language paradigms, imperative style programming, comparison of programming paradigms.

Functional programming, Functions - Mathematical concepts and terminology, Lambda calculus, Function definitions, programs as functions, Functional programming Languages. Haskell basics, GHCi interpreter.

Module2(6Hrs)

ProgramminginHaskell: Expressions and evaluation, Lazy evaluation, let expressions, scopes.

Basic data types in Haskell, operators, infix operators, associativity and precedence, Arithmetic functions.

types, definitions, currying and uncurrying, type abstraction.

Function definitions, pattern matching, guards, anonymous functions, higher order functions.

Recursion, Programming exercises.

Module3(7Hrs)

Datatypes: tuples and lists: Tuples, Lists: building lists, decomposing lists, functions on lists, built-in functions on lists, primitive and general recursion over lists, infinite lists.

Strings: functions on strings.

Polymorphism and overloading, conditional polymorphism

Module4(6Hrs)

Type classes, Algebraic data types, Modules, Recursive data types.

User defined data types, Records, Stacks, Queues, Binary trees, Constructors, Destructors.

Module5(6Hrs)

Functor, Applicative functor, Monad

Programming with actions: Functions vs actions, Basics of input/output, the do notation, interacting with the command line and lazy I/O, File I/O.

25PAGT311	REUSE AND RECYCLE TECHNOLOGY	CATEGORY	L	T	P	CREDIT
		AUDIT COURSE	3	0	0	-

Preamble: "Reuse and Recycle Technology" typically focuses on sustainable practices and technologies aimed at reducing waste, conserving resources, and promoting environmental responsibility.

Course Outcomes: After the completion of the course the student will be able to

CO1	Explain the principles and technologies behind waste reduction, resource conservation, and sustainable practices
CO2	Describe and Analyze waste generation and management.
CO3	Apply the knowledge of various reuse strategies and their application in different industries and Analyze various recycling technologies
CO4	Appraise the methods of E-waste management and Eco friendly packaging
CO5	Comprehend Environmental Regulations and Policies, Understand the importance of environmental regulations and policies in addressing environmental challenges

Model Question paper**AUDIT COURSE****25PAGT311 - REUSE AND RECYCLE TECHNOLOGY***Answer any five full questions, each carries 12 marks.*

1.	(a) What are the 3 pillars of sustainability?	5
	(b) What is sustainable waste management? What makes sustainable waste management so important?	7
2.	(a) How do the three categories of municipal solid waste differ?	5
	(b) Discuss the municipal waste collection and management?	7
3.	(a) Explain the major differences between Reuse and Recycle?	5
	(b) Give an overview of recycling technologies used for any two materials. Discuss the Process involved.	7
4.	(a) What are the common sources of E-waste?	5
	(b) What are the challenges and opportunities in E-waste management?	7
5.	(a) What is the case law for waste recycling in India?	5
	(b) Discuss sustainable packaging and its environmental impacts.	7
6.	Explain the various environmental regulations in India for addressing Environmental challenges.	12
7.	a) Give examples of water reuse technologies in a circular economy.	5
	b) How can we reduce e-waste with sustainable solutions?	7

Syllabus

Module	Content	Hours	Semester Exam Marks (%)
I	Introduction to Sustainability , Understanding sustainability and its importance, The three pillars of sustainability: Environmental, Social, and Economic. Biodiversity conservation, Climate change and mitigation Sustainable resource management.	6	20
II	Waste Management , Definition and classification of waste, Waste Generation and Composition, Waste Collection and Transportation, Waste Segregation and Sorting. Waste Disposal Methods Historical perspectives on waste management, The three Rs: Reduce, Reuse, and Recycle.	6	20
III	Recycling and Reuse : Importance of reuse, Application of reuse in various industries, Challenges and opportunities in reuse, Overview of recycling technologies, Circular economy, Sorting and processing of recyclable materials, Advanced recycling methods. Emerging technologies in recycling.	6	20
IV	E-waste Recycling , Challenges and environmental impact of electronic waste, E-waste recycling methods and regulations, Sustainable electronics design, Sustainable Packaging , Packaging materials and their environmental impact, Eco-friendly packaging alternatives, Packaging design for sustainability	6	20
V	Environmental Regulations and Policies , Understand the importance of environmental regulations and policies in addressing environmental challenges, National and international waste and recycling regulations, Compliance and enforcement, Industry standards and certifications	6	20

Preamble: Study of this course provides the learners a clear understanding of fundamental concepts in simulation and modelling. This course covers the different statistical models, importance of data collection and various types of simulations. The course helps the learners to find varied applications in engineering, medicine and bio-technology.

Course Outcomes: After the completion of the course the student will be able to

CO1	Analyse the requirement and find appropriate tool for simulation.
CO2	Differentiate the different statistical models.
CO3	Discuss the different techniques for generating random numbers.
CO4	Analyse the different methods for selecting the different input models..
CO5	Discuss the different measures of performance and their estimation

AUDITCOURSE

25PAGT312–SYSTEMMODELLING***AnsweranyfivequestionsEachcarries12marks*****PART A**

1. a. Discuss the advantages and disadvantages of simulation. (5marks)
 b. What are the areas of application of simulation (7marks)
2. a. A bus arrives every 20 minutes at a specified stop beginning at 6:40 A.M. and continuing until 8:40 A.M. A certain passenger does not know the schedule, but arrives randomly (uniformly distributed) between 7:00 A.M. and 7:30 A.M. every morning. What is the probability that the passenger waits more than 5 minutes for a bus? (5 marks)
 b. A production process manufactures computer chips on the average at 2% nonconforming. Every day, a random sample of size 50 is taken from the process. If the sample contains more than two nonconforming chips, the process will be stopped. Compute the probability that the process is stopped by the sampling scheme. (7 marks)
3. a. Discuss the different types of tests for random numbers. (5marks)
 b. Generate random numbers using multiplicative congruential method with $X_0 = 5$, $a = 11$, and $m = 64$. (7 marks)
4. a. What are the different methods of data collection. (4marks)
 b. Records pertaining to the monthly number of job-related injuries at an underground coal mine were being studied by a federal agency. The values for the past 100 months were as follows:

Injuries per Month	Frequency of Occurrence
0	35
1	40
2	13
3	6
4	4
5	1
6	1

- (a) Apply the chi-square test to the data to test the hypothesis that the underlying distribution is Poisson. Use the level of significance $\alpha = 0.05$.
- (b) Apply the chi-square test to the data to test the hypothesis that the distribution is Poisson with mean 1.0. Again let $\alpha = 0.05$.
- c) What are the differences between parts (a) and (b), and when might each case arise? (8 marks)

5. a. What is the difference between validation and verification. (5 marks)
b. Discuss the different measures of performance and their estimation. (7 marks)
6. a. Discuss the different methods of parameter estimation. (5 marks)
b. With an example, describe the Poisson process. (7 marks)
7. a. Distinguish between discrete and continuous systems. (5 marks)
b. What are the different components of a simulation system? (7 marks)

Syllabus

25PAGT310	Principles of Automation	CATEGORY	L	T	P	CREDIT
		CREDIT COURSE	3	0	0	0

Preamble:

This course deals in detail with the various aspects of automation such as sensors, actuators, controllers, mechanical and electrical elements and their integration for automating new and existing manufacturing and process industries and applications. This course will be beneficial to students in designing automation schemes for industries and to design automated systems

Course Outcomes: After the completion of the course the student will be able to

CO1	Explain the fundamentals of sensors systems and to choose a suitable sensor system for the given application based on the evaluation of the constraints.
CO2	Explain the fundamentals of signal conditions and to design a suitable signal conditioning scheme for given application.
CO3	Describe the characteristics of various actuator systems and to decide the right type of actuator for the given application.
CO4	Describe the importance of an industrial robot and fundamentals of numerical control in automation.
CO5	Explain the fundamentals of controllers used in industrial automation and to construct simple automation schemes by ladder logic programs.

Assessment Pattern

Bloom's Category	End Semester Examination
Understand	70 %
Apply	30 %

Mark distribution

Total Marks	CIE	ESE	ESE Duration
100	40	60	2.5 hours

Continuous Internal Evaluation Pattern: 40 marks

Course based task (Project/Assignments/Simulations/Casestudies): 15 marks

Seminar/Quiz: 15 marks

Test paper, 1 no.: 10 marks

Test papers shall include minimum 80% of the syllabus.

End Semester Examination Pattern: 60 marks

The examination will be conducted by the respective College. The examination will be for 150 minutes and will contain 7 questions, with minimum one question from each module of which student should answer any five. Each question can carry 12 marks.

Model Question Paper
25PAGT310 – Principles of Automation

Time 2.5 Hrs

Marks 60

Answer any five questions Each carries 12 marks

1. (a) Differentiate the static and dynamic characteristics of a temperature sensor and explain how it affects the selection of a suitable temperature sensor. (6 marks)
(b) Explain the working of a strain-gauge. (6 marks)

2. (a) Explain why anti-aliasing filters are used in analog to digital converters. (3 marks)
(b) Design a first order low pass filter with a cut-off frequency of 2 kHz. (9 marks)

3. (a) What are the factors to consider while deciding choosing between hydraulic, pneumatic or electrical actuation systems for an automation scheme? (4 marks)
(b) Explain the working of a three-way pressure reducing valve. (4 marks)
(c) Explain the working of solenoids. In what applications would you use a Solenoid valve. (4 marks)

4. (a) Explain the principle of the Touch sensor and also mention how they are used in robots. (5 marks)
(b) Explain the basic terminologies in robotics system and also explain the components of robotic system. (7 marks)

5. (a) With neat schematic explain the architecture of the PLC. (6 marks)
(b) Explain the use of an up-down counter in PLC with a suitable example. (6 marks)

6. (a) Write short note on SCADA. What is difference PLC and SCADA? (3 marks)
(b) Construct a ladder logic for controlling a process tank as per the logic given below;
i. The tank should be filled by a valve V1 when low level float switch L1 is ON and an external input S1 is received.

- ii. V1 should be closed when the liquid level reaches a high-level float switch L2.
 - iii. An agitator motor should be turned on after a delay of 5 sec after L2 is triggered.
 - iv. After agitating for 30 mins, content of the tank should be emptied by opening another valve V2.
 - v. The temperature should be maintained at 70°C using a thermostat T1 and Heater H
- (9 marks)
7. (a) Explain the level of Automation. (6 marks)
- (b) Explain the working of Flow sensor (6 marks)

Syllabus and Course Plan

No	Topics	No. of Lectures
1	Introduction to Industrial Automation	
1.1	Basic Elements of an Automated System, Level of Automation	2
1.2	Hardware components for Automation: Sensors, classification, Static and dynamic behaviour of sensors.	2
1.3	Basic working principle of different sensors: Proximity sensors, Temperature sensors, flow sensors, Pressure sensors, Force sensors. Position sensors	4
2	Signal Conditioning	
2.1	Need for signal conditioning, Types of signal conditioning.	2
2.2	Signal conditioning using operational amplifier-Amplifier (Inverting and Non-inverting) and Filter circuits (Basic concepts). Design of first order low pass filter.	2
2.3	Signal conditioning for data acquisition systems, anti-aliasing filters, Analog-Digital Conversions, Analog-to-Digital Converters (ADC)- Steps in analog-to-digital conversion, Successive Approximation Method, Digital-to-Analog Converters (DAC)- Steps in digital to analog conversion, Zero-order and first order data hold circuits	4
3	Actuators	
3.1	Types of actuators-mechanical, electrical, pneumatic and hydraulic actuators. (Basic working principle)	2
3.2	Mechanical systems for motion conversion, transmission systems	3
3.3	Solenoids, Electric and stepper motors control.	3
4	Robotics and Automated Manufacturing Systems	
4.1	Robot Anatomy and Related Attributes: Joints and Links, Common Robot Configurations, Joint Drive Systems, Sensors in Robotics (Basic concepts)	3
4.2	Robot Control Systems, Applications of Industrial Robots-Material handling	4
4.3	Fundamentals of Numerical Control (NC) Technology	1
5	Discrete Control and Programmable Logic Controllers	

5.1	DiscreteProcessControl:LogicandSequence control	2
5.2	LadderLogicDiagrams,ProgrammableLogicControllers: ComponentsofthePLC,PLCOperatingCycle,Programmingthe PLC (Basic concepts only)	4
5.3	IntroductiontoDistributedcontrolsystem(DCS)andSupervisory Control and Data Acquisition Systems (SCADA)	2

25PAGT303	FORENSICENGINEERING	CATEGORY	L	T	P	CREDIT
		Audit Course	3	0	0	-

Preamble: This course explores various aspects of Forensic Engineering and different methods, tools and procedures used by Engineers to investigate and analyze. The students will learn to develop their awareness in Forensic Engineering.

Pre-requisite: Nil

Course Outcomes:

After the completion of the course, the student will be able to

CO1	Identify the fundamental aspects of forensic Engineering
CO2	Apply forensic Engineering in Practical workflow and Investigation
CO3	Apply methods and analysis in Forensic Investigation
CO4	Develop practical strategies and standards of Investigation
CO5	Create an awareness in criminal cases and create Engineering expertise in court room on forensic Engineering

Model Question paper
APJ ABDUL KALAM TECHNOLOGICAL UNIVERSITY
THIRD SEMESTER. TECH DEGREE EXAMINATION

Course Code: 25PAGT303

Course Name: FORENSIC ENGINEERING

Max. Marks: 60

Duration: 2.5 Hours

PART A

<i>Answer any 5 questions, each question carries 12 marks.</i>		Marks
1.	(a) What are the uses of forensic engineering in legal laws?	(7)
	(b) Discuss the professional responsibility of a forensic Engineer.	(5)
2.	(a) What are the steps in preliminary on-site investigation?	(7)
	(b) With suitable examples, explain photocataloguing?	(5)
3.	(a) Discuss STEP method.	(7)
	(b) Explain root cause Analysis	(5)
4.	(a) Detail about EDAX Method.	(7)
	(b) Enlist the uses of NDT in forensic Analysis with example	(5)
5.	(a) Differentiate NFPA & FMV Standards	(7)
	(b) Briefly discuss the term Email Phishing?	(5)
6.	Define the responsibility and duty of a forensic expert in the court.	(12)
7.	Explain Forensic Engineering workflow with examples	(12)

Syllabus and Course Plan

Module No	Topic	No. of Lectures (Hours)
1	Module01: Introduction to Forensic Engineering (6 Hours)	
1.1	Forensic Engineering- Definition, Investigation Pyramid, Eyewitness Information, Role in Legal System	2
1.2	Scientific Method- Applying scientific methods in Forensic Engineering- Engineer as expert Witness- Scientific methods and legal system	2
1.3	Qualification of Forensic Engineer- Technical- Knowledge- Oral-written- Communication- other skills- Personality Characteristics	1
1.4	Ethics and professional responsibilities.	1
2	Module02: Forensic Engineering Workflow and Investigation Methods (6 Hours)	
2.1	Forensic Engineering Workflow- Team & planning- preliminary onsite investigation. Sampling- selection of sample- collection- packing- sealing of samples.	2
2.2	Source and type of evidence - Paper documentation- digital documentation- electronic data. Physical Evidence- Collection of photograph- cataloguing - Recognizing the Evidence- organizing- Evidence Analysis - Reporting	2
2.3	Investigation Methods- Cause and Causal mechanism analysis- Time and event sequence- STEP method. Human Factors, Human errors - Analysis of Operative Instruction and working Procedures	2
3	Module03: Physical Product Failure & Analytical Methods (6 Hours)	
3.1	Introduction to typical Forensic Engineering Toolbox- NDT, Crack detection and human eye- Hardness testing- and Destructive testing Methods with case studies	2
3.2	Indirect stress strain Analysis- Brittle lacquer technique, Contact Radiography- Metallography- EDAX method	1
3.3	Forensic Optical Microscopy- Examination- Magnification- USB Microscopy - Wifi Enabled microscopy - Reflected microscopy	2
3.4	Novel Tools and System - Contour Method- Flash Thermography- Thermographic signal reconstruction (TSR)- Electromagnetically induced acoustic Emission (EMAE)- Pulsed Eddy Current (PEA)- Theory only	1
4	Module04: Cyber Forensic, Civil, Electrical Accidents & Standards (6 Hours)	
4.1	Basics of Digital & Cyber forensics: Technical concepts; labs and tools; collecting evidence Operating System Forensic basics with- Windows, Linux- Mobile Forensic- Antiforensics- Malware- Web attack forensics with Email Crimes- Cyber Laws	3
4.2	Different types of Forensic accident investigations- Civil Engineering- Structural- Road accidents - Fire accidents - Water related accidents- Electrical accidents and Investigation methods	2
4.3	Protocol for forensic investigations- Standard guides- scope significance- use- procedures- reports. Standards- ASTM standards - FMV Standards - SAE Standards- Relevant Standards- NFPA Standards- International Standards	1

5	Module05:EngineerintheCourtroom&CriminalCases(6 Hours)	
5.1	RoleofanEngineeringExpert-Report-pretrialmeetings-Alternative dispute resolution-Single joint expert. Engineer in the court room	2
5.2	Criminal Cases-Introduction-Counterfeit coins-fraudulent road accidents-Fraudulent Insurance claims.	2
5.3	CyberCrimesandCases-SIMSwapping-ATMCloning-Microsoft Internal Spam- Intellectual property cases.	2

INTERNSHIP

A student shall opt for carrying out the Internship at an Industry/Research Organization or at another institute of higher learning and repute (Academia). The organization for Internship shall be selected/decided by the students on their own with prior approval from the faculty advisor/respective PG Programme Coordinator/Guide/Supervisor. Every student shall be assigned an internship Supervisor/Guide at the beginning of the Internship. The training shall be related to their specialisation after the second semester for a minimum duration of six to eight weeks. On completion of the course, the student is expected to be able to develop skills in facing and solving the problems experiencing in the related field.

Objectives

- Exposure to the industrial environment, which cannot be simulated in the classroom and hence creating competent professionals for the industry.
- Provide possible opportunities to learn, understand and sharpen the real time technical / managerial skills required at the job.
- Exposure to the current technological developments relevant to the subject area of training.
- Create conducive conditions with quest for knowledge and its applicability on the job.
- Understand the social, environmental, economic and administrative considerations that influence the working environment.
- Expose students to the engineer's responsibilities and ethics.

Benefits of Internship Benefits

to Students

- An opportunity to get hired by the Industry/organization.
- Practical experience in an organizational setting & Industry environment.
- Excellent opportunity to see how the theoretical aspects learned in classes are integrated into the practical world. On-floor experience provides much more professional experience which is often worth more than classroom

teaching.

- Helpsthemdecideiftheindustryandtheprofessionisthebestcareer option topursue.
- Opportunitytolearnnewskillsandsupplementknowledge.
- Opportunitytopracticecommunicationandteamworkskills.
- Opportunitytolearnstrategiesliketimemanagement,multi-taskingetcin an industrial setup.
- Makesavaluableadditiontotheirresume.
- Enhancestheircandidacyforhighereducation/placement.
- Creatingnetworkandsocialcircleanddevelopingrelationships with industry people.
- Providesopportunitytoevaluatetheorganizationbeforecommittingtoa full time position.

BenefitstotheInstitute

- Buildindustryacademiarelations.
- Maketheplacementprocesseasier.
- Improveinstitutionalcredibility&branding.
- Helpsinretentionofthestudents.
- CurriculumrevisioncanbemadebasedonfeedbackfromIndustry/ students.
- Improvementinteachinglearningprocess.

BenefitstotheIndustry

- Availabilityofreadytocontributecandidatesforemployment.
- Yearroundsourceofhighlymotivatedpre-professionals.
- Studentsbringnewperspectivestoproblemsolving.
- Visibilityoftheorganizationisincreasedoncampus.

- Quality candidate's availability for temporary or seasonal positions and projects.
- Freedom for industrial staff to pursue more creative projects.
- Availability of flexible, cost-effective work force not requiring a long-term employer commitment.
- Proven, cost-effective way to recruit and evaluate potential employees.
- Enhancement of employer's image in the community by contributing to the educational enterprise.

Types of Internships

- Industry Internship with/without Stipend
- Govt/PSU Internship (BARC/Railway/ISRO etc)
- Internship with prominent education/research Institutes
- Internship with Incubation centres/Start-ups

Guidelines

- All the students need to go for internship for minimum duration of 6 to 8 weeks.
- Students can take mini projects, assignments, case studies by discussing it with concerned authority from industry and can work on it during internship.
- All students should compulsorily follow the rules and regulations as laid by industry.
- Every student should take prior permissions from concerned industrial authority if they want to use any drawings, photographs or any other document from industry.
- Students should follow all ethical practices and SOP of industry.
- Students have to take necessary health and safety precautions as laid by the industry.
- Students should contact his/her Guide/Supervisor from college on weekly basis to communicate the progress.
- Each student has to maintain a diary/log book
- After completion of internship, students are required to submit
 - Report of work done
 - Internship certificate copy
 - Feedback from employer/internship mentor
 - Stipend proof (in case of paid internship).

Total Marks 100: The marks awarded for the Internship will be on the basis of (i) Evaluation done by the Industry (ii) Students diary (iii) Internship Report and (iv) Comprehensive Viva Voce.

Continuous Internal Evaluation: 50 marks

Student's diary - 25 Marks

Evaluation done by the industry- 25 Marks

Student's Diary/Daily Log: The main purpose of writing daily diary is to cultivate the habit of documenting and to encourage the students to search for details. It develops the students' thought process and reasoning abilities. The students should record in the daily training diary the day to day account of the observations,

impressions, information gathered and suggestions given, if any. It should contain the sketches & drawings related to the observations made by the students. The daily training diary should be signed after every day by the supervisor/ in charge of the section where the student has been working. The diary should also be shown to the Faculty Mentor visiting the industry from time to time and got ratified on the day of his visit. Student's diary will be evaluated on the basis of the following criteria:

- Regularity in maintenance of the diary
- Adequacy & quality of information recorded
- Drawings, design, sketches and data recorded
- Thought process and recording techniques used
- Organization of the information.

The format of student's diary

Name of the Organization/Section:

Name and Address of the Section Head:

Name and Address of the Supervisor:

Name and address of the student:

Internship Duration: From..... To.....

Brief description about the nature of internship:

Day	Brief write up about the Activities carried out: Such as design, sketches, result observed, issues identified, data recorded, etc.

Note:

- Student's Diary shall be submitted by the students along with attendance record and an evaluation sheet duly signed and stamped by the industry to the Institute immediately after the completion of the training.
- Attendance Sheet should remain affixed in daily training diary. Do not remove or tear it off.
- Students shall sign in the attendance column. Do not mark 'P'.
- Holiday should be marked in red ink in the attendance column. Absent should be marked as 'A' in red ink.

Evaluation done by the Industry (Marks 25)

Format for Supervisor Evaluation of Intern

Student Name : _____ Date: _____

Supervisor Name : _____ Designation: _____

Company/Organization: _____

Internship Address: _____

_____ Dates of Internship: From

To _____

Please evaluate intern by indicating the frequency with which you observed the following parameters:

Parameters	Marks	Needs improvement (0 – 0.25 mark)	Satisfactory (0.25-0.50 mark)	Good (0.75 mark)	Excellent (1 mark)
Behavior					
Performs in dependable Manner					
Cooperates with co-workers and supervisor					
Shows interest in work					
Learns quickly					
Shows initiative					
Produces high quality work					
Accepts responsibility					
Accepts criticism					
Demonstrates organizational skills					
Uses technical knowledge and expertise					
Shows good judgment					
Demonstrates creativity/originality					
Analyzes problem effectively					
Is self-reliant					
Communicates well					
Writes effectively					
Has a professional attitude					
Gives a professional appearance					
Is punctual					
Uses time effectively					

Overall performance of student

Intern (Tick one) : Needs improvement (0-0.50 mark) / Satisfactory (0.50-1.0 mark) /
Good (1.5 mark) / Excellent (2.0 mark)

Additional comments, if any (2 marks):

Signature of Industry Supervisor

Signature of Section Head/HR Manager

Office Seal

EndSemesterEvaluation(ExternalEvaluation):50Marks

InternshipReport	-	25Marks
VivaVoce	-	25Marks

InternshipReport:Aftercompletionoftheinternship,thestudentsshouldprepare a comprehensive report to indicate what he has observed and learnt in the training period and should be submitted to the faculty Supervisor. The student may contact Industrial Supervisor/ Faculty Mentor for assigning special topics and problems and should prepare the final report on the assigned topics. Daily diary will also help to a great extent in writing the industrial report since much of the information has already been incorporated by the student into the daily diary. The training report should be signed by the Internship Supervisor, Programme Coordinator and Faculty Mentor.

TheInternshipreport(25Marks)willbeevaluatedonthebasisoffollowingcriteria:

- Originality
- Adequacy andpurposefulwrite-up
- Organization,format,drawings,sketches,style,languageetc.
- Varietyandrelevanceoflearningexperience
- Practicalapplications,relationshipswithbasicttheoryandconceptstaught in the course

VivaVoce(25Marks)willbedonebyacommitteecomprisingFacultySupervisor, PG Programme Coordinator and an external expert (from Industry or research/academic Institute). This committee will be evaluating theinternship report also.

CODE	COURSE NAME	CATEGORY	L	T	P	CREDIT
25PADP305	RESEARCH PROJECT PHASE I	PROJECT WORK	0	0	17	11

Research Project: Students choosing track 2 shall carry out the research project in their parent Institution only under the guidance of a supervisor assigned by the DLAC.

Dissertation: All categories of students in track 1 are to carry out the dissertation in the Institute they are studying or can work either in any CSIR/Industrial R&D organization/any other reputed Institute which have facilities for dissertation work in the area proposed.

Mark Distribution:

Phase 1: Total marks: 100, only CIA

SEMESTER-IV

CODE	COURSENAME	CATEGORY	L	T	P	CREDIT
25PADP401	DISSERTATIONPHASE II	Project Work	0	0	24	16

All categories of students in track 1 are to carry out the DISSERTATION PHASE II in the institute they are studying or in any Industrial/ R&D organization/any other reputed institute which have facilities for dissertation work in the area proposed. DISSERTATION PHASE II shall not compulsorily continuation of DISSERTATIONPHASEI. The student has to publish a research article in a conference or a reputed journal before appearing for the end-semester examination. The eligibility criteria for registering to the end semester examination are attendance in the course and no pending disciplinary action. The minimum attendance for appearing for the end semester examination is 75%. Students who do not meet these eligibility criteria are ineligible (identified by FE grade) to appear for the ESE. Students, who have completed a course but could not appear for the end semester examination, shall be awarded ‘AB’ Grade, provided they meet other eligibility criteria. The pass minimum for the course is 45% for ESE and 50% for (CIA and ESE) put together.

Continuous Internal Assessment (CIA) Total Marks: 100

The evaluation committee comprises

- 1- Project Coordinator(s)
- 2- A Senior faculty member
- 3- Supervisor of the student

Pattern (CIA)

Zero the evaluation by the Evaluation Committee	-
Interim evaluation by the Evaluation Committee	30 marks
Final evaluation by the Evaluation Committee	50 marks
Project progress evaluation by supervisor	20 marks

Evaluation by the supervisor

The guide/supervisor shall monitor the progress being carried out by the student on a regular basis. In case it is found that progress is unsatisfactory it shall be reported to the Department Evaluation Committee for necessary action.

Student's Diary/ Log book: The main purpose of writing diary/log book is to cultivate the habit of documenting and to encourage the students to search for details. The activity diary shall be signed after every week by the supervisor.

End Semester Evaluation (ESE) Total Marks: 100

The evaluation committee comprises

- 1- Project Coordinator(s)
- 2- An external expert (from Industry or research/academic institute)
- 3- Supervisor of the student

Pattern(ESE)

1. InnovationandOriginality(10marks):

Assessmentoftheuniquenessandinnovationdemonstratedintheprojectwork.

Original contributions, if any, to the field or problem area.

2. ImplementationandExecution(20marks):

Evaluationoftheactualimplementationorexecutionoftheproject,including: Quality of work done

Demonstrated skills and techniques applied

Adherencetoprojecttimelinesandmilestones

3. ProjectDocumentation(25marks):

Comprehensive project report evaluation including:

Introduction and problem statement

Literature review

Methodologyandapproach

Results and analysis

Conclusionandrecommendations References

and citations

Dissertation outside the Institute: For doing dissertation outside the Institution, the following conditions are to be met:

- i. They have completed successfully the course work prescribed in the approved curriculum up to the second semester.
- ii. The student has to get prior approval from the DLAC and CLAC.
- iii. Facilities required for doing the dissertation shall be available in the Organization/Industry (A certificate stating the facilities available in the proposed organization and the time period for which the facilities shall be made available to the student, issued by a competent authority from the Organization/Industry shall be submitted by the student along with the application).
- iv. They should have an external as well as an internal supervisor. The internal supervisor should belong to the parent institution and the external supervisor should be Scientists or Engineers from the Institution/Industry/ R&D organization with which the student is associated for doing the dissertation work. The external supervisor shall be with a minimum post graduate degree in the related area.
- v. The student has to furnish his /her monthly progress as well as attendance report signed by the external supervisor and submit the same to the concerned internal supervisor.
- vi. The external supervisor is to be preferably present during all the stages of evaluation of the dissertation.
